Pro 26 handheld scanner by Radio Shack in wonderful condition. Used very little. PROBLEM FREE. To many features to list them all but here are the important ones: Continuous coverage from 25Mhz to 1.3Ghz(excluding cellular). Recieves FM and television broadcasts(great for football and talk shows). Has 200 programamble channels,Hyperscan,ten channel storage banks,Limit search,Direct search,Hypersearch,Weather Band Key, Memory Backup,Low Battery Indicator and much more! Original price was $399.00. Comes with 50 page owners manual. Have fun with this one. I'm looking for $260.00 for this one. If interested I can put a picture on my website. Thanks, George georgef@prolog.net http://home.ptd.net/~georgef

I am looking into purchacing a new BC9000xlt. This seems to be a very superior scanner, but I was wondering if anyone could think of anything that would be better for about the same price or less. I want a base scanner, so could you please tell me if this would be my best choice or not?

Thanks a lot!

Hi

Don't know if this is common knowledge amongst you all here......but if you point your browsers @ www.omega.com and fill out their little form they will mail you a free freq allocation chart like the one the Gov. sells for 7 bucks.....I got mine within a week after doing this........ it's not printed on the best quality paper....but what can you say about something free...they also send you a catalog of all kinds of scientific test equipment...if you are into that.

Kind Regards

D.B.

Jack (kryppy@bellsouth.net) wrote:
: Just got a sweet PRO2004 with a strange problem,
: when ever you turn it on, the display goes nuts. It works fine but the
: display is garbled. Pressing the reset on the back clears it up and it
: just runs fine till you shut it off.
: Another thing, I thought all 2004's were cell enabled, this one is
: blocked. Seems like a great scanner so far, too bad it has a dim
: backlight....

Actually virtually all 2004's were blocked-they sold almost no unblocked
units-they recalled nearly all of them, and added the diode, and later
shipments had it installed at the factory.
The recalled units had the diode added on the BOTTOM of the cpu board!
So if you try to mod it and find the diode missing, then look for the
instructions for getting to the bottom of the module to remove the diode.

The BC9000xlt is a terrific radio, but I think for most people the 895xlt is a better buy. Check out the 895xlt, it is considerably cheaper, has CTCSS which is an option on the 9000xlt, has trunk tracking, better audio (reportedly). I think CEI has it on sale.

Judging by the problems that Scottsdale and Gilbert PD have had for the last 2 months with the county analog 800 system they would be wise to keep the 460 frequencies as a backup when the 800 system reverts to fail soft mode.

Geez, kids....

I knew it was too good to be true.

I knew he couldn't keep his mouth shut.

I knew he wouldn't be satisfied with what he did to Bill Cheek. People like him never
are.

They want more.

So he's back. To terrorize the NG once more.

OK everyone.

Now's our chance to make our opinion count.

Now we can let him know what we think of his "triumphant" return.

All together now:

"GET A LIFE YA FRIGGIN' LOON!"

Thank you. Thank you very much. Elvis has left the building...

I too have a 2004 with a screwy display problem. I posted a thread not long ago and someone suggested a bad solder connection. I haven't had time to check mine yet. Good place to start! I changed the 9-volt, and still have the problem. The display apparently has a back light to it, not just the LCD.

Good Luck!

I saw an ad in the paper for a new 2.4 Gigahertz cordless phone. Claims to have 10X the range of the 900 Mhz. Any info on these new phones yet?
Thanks, Fred

Yes----and----No. Your bigstick is resonant at 27 Mhz. It may work, and work well, for frequencies in the 30 to 50 Mhz band, but is very poor for use on VHF-hi (144-174) and UHF (420 and above). I use an old CB whip to listen to skip around 33 Mhz but find I can't even hear my local ambulance on 155.385, which is strong using the telescopic whip on the back of the scanner.

Hi Folks,
I've found all I can handle as far as Disney World frequencies are concerned, but haven't seen anything out on the net relating to Universal Studios Florida frequencies. I'm interested in anything from wireless mics used at the theme park to park security, etc. If anyone has a list, send it to my email address and post it here for others as this is hard to come by.

Thanks,
Michael

Well, you seem to be describing two different problems with the screen.
If the back light is erratic, thats no big deal. Your switch between dim
and full is probably dirty.
If the data is garbled, that is a very different sitatuation. You may
have a power supply problem. Run the unit off of 12 volts dc and see if
that eliminates the problem. I never use the 110 volt supply as it adds
in noise in my 2004. And, it creates lots of bad heat!

Mackey and his cohorts like Healey have been playing basically the same game for over two years. It is called "kill a news group or two". You should take their harassment as a compliment. They would not be harassing you if they did not percieve you to be knowledgable on the subject at hand. These are the people they want to drive off the group, for several reasons. they have a problem with anyone they perceive to be an authority on the subject of scanners , or even radio in general. As a matter of fact, they have trouble with ANYONE they perceive as an authority figure. This is a carry - over from childhood, and they fit a certain profile. I will not bore you with the details , at least not now. They are a definite "type". Let`s just say they hunger for respect, Which they deem to be "attention" because they have no self - respect, and leave it at that for the time being. They have the typical adolescent way of getting "attention" - they agitate and harrass. I don`t see where anythiing Mackey ever posted "terrorized" this news group to any great degree. I think his prattlings are similar to what you hear on the CB band. And there are always a certain number of those who fit the same profile. These are the ones that jump on the band wagon and follow. Being basically immature, they don`t lie very well, and contradict themselves constantly, depending what suits their purpose at the moment. They will literally swear "black is white", so to speak. This is what happened whenever Kendrick`s data was re-posted. He would try to "prove" the FACTS were NOT the facts. The pattern here never varies. He is losing ground just hanging around here, since nobody of any intelligence lends his babbling any credence. Have faith in your fellow news group denizen. People are really fed up with him. He is "old hat".

Hello. I'm interested in trading for either e Uniden BC-9000XLT, a PRO-2042, or a PRO-2035 base scanner. All I require is that the scanner works 100%, is at least a 7/10 cosmetically, comes with some type of power cord, and comes with a manual. Anything above that is extra. Please let me know if you have one of these models to trade. Here is what I have to trade (please let me know for conditions etc):

-RS PRO-43 HT Scanner
-RS 1.75a/12v Power Supply
-RS Powerhorn 5w External Speaker
-RS Stereo Pre-Amp
-RS 4 Channel Mixrophone Mixer
-Panasonic BQ-4C AA/D Battery Charger

Hey Mina - you should still be able to monitor the police, even though they're trunked, if you know the frequencies. putting them all in and running them w/o the delay should do it, if you're willing to keep that finger on the scan button, hitting it each time it lands on an active channel that doesn't follow the conversation you heard on the previous channel. A little more work, but the police are generally the best action in town. Good luck! (I see you got plenty of other responses to your request with other types of monitoring to follow.)

Never heard of that problem before. Maybe you need to change the
9-volt memory battery?

>Another thing, I thought all 2004's were cell enabled, this one is

Some were, others need to have a diode clipped. When you clip the
diode, add one somewhere else to get an additional 400 channels.

>blocked. Seems like a great scanner so far, too bad it has a dim
>backlight....

No solution for that. The electroluminescent displays (ELD) which
were available at Tandy are long sold out. Unless you can find
someone with a crapped out scanner that has a good ELD, you're SOL.

My PRO-2003 is still running, 15 years after its purchase. Okay, so
its place has been taken by a PRO-2004 and a PRO-2006, but it still
works. The only thing I'd ask for is a way to dim that dang neon
light. The thing produces enough light to read by at night. Thank
goodness the PRO-2006 has an on/off switch. The PRO-2003 produces one
heck of a buzzing in other radios when it's on.

The modification that you are half-way refering to is the short-wave
mod for the Pro-43. This modification allowed you to make the Pro-43
step in 12.5kHz steps in the cellular bands instead of the 30kHz steps
that is actually allocated in that range.

Wiggie

Channel 6 is always my favorite to listen to. In the Detroit, Michigan area, it is used by a species of humanoid that is fascinating to listen to from an anthropological point of view. Beware though, sometimess it can be frustratingly difficult to translate the primitive vernacular -- even when they're not using echo boxes or overmodulating. However, any difficulty you encounter in decoding the low-level form of communication should viewed as evidence that you have evolved well beyond their primordial stage.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

You don't need an attenuator, you need a notch filter to filter out
something like that.

Still using channel 6, are they? I lived in Kansas City back in 1973
and there was a guy called Preacher Man who would do stuff like this:

"How about it Fireball Fireball Fireball Fireball Fireball Fireball
Fireball Fireball Fireball Fireball Fireball FireballFireball Fireball
Fireball Fireball Fireball FireballFireball Fireball Fireball Fireball
Fireball FireballFireball Fireball Fireball Fireball Fireball Fireball
Freball Fireball Fireball Fireball Fireball Fireball! This is the one
Preacher Man Preacher Man Preacher Man Preacher Man
Preacher Man Preacher Man Preacher Man Preacher Man
Preacher Man Preacher Man Preacher Man Preacher Man
Preacher Man Preacher Man Preacher Man Preacher Man
Preacher Man Preacher Man Preacher Man Preacher Man
Preacher Man Preacher Man Preacher Man Preacher Man
in duh Wheet Feelds!"

Rumor had it that he had ripped out all of the inside of his car
except for the driver's seat so he could install radio equipment.
I was on vacation once over near Chicago and heard him jabbering away.
After the big FCC bust of 1974, *everyone* else was quiet and/or off
the air except for him.

> Also need the part number for a PRO-2005 front panel.

The front panel ("Escatcheon, front"), item #21 on the exploded parts diagram, is GRE part no. GA-88D-7614. The entire bottom, item #5, is GA-88D-7614, and is flagged 'not repairable' i.e. you can't order the legs alone. Be warned that Tandy National Parts, (800) 442-2425, usually asks a bundle for custom plastic parts. You'll be better off with a "smoked 2005" ... or duct tape.

It depends on your area. Different channels are popular in different areas.
The one unwritten convention is that the upper 10 channels are mostly used
for sideband. (You won't be able to understand them) Also, be aware that
during the day, almost everywhere in the country is VERY noisy due to
overcrowding and skip.

Good luck.
Tony

Hi Guys,

A good freind of mine is looking at getting a used Pro2026 from one of his employees. Wondering if it's a good scanner? How does it compare to a Pro2006?
Any info is greatly appreciated.

Please reply to email.

Thanks,

Dan Dialogue

R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

had mine for several years. 20 channels only tho. Needs more volume out
of the main speaker. Reception is weaker than on my bc200. I program in
just the local stuff.
Had the solder joint on the antenna connector on the circuit board come
loose a couple times. resoldered. (pretty normal on radios)
I replaced the antenna connector with one that has more surface area to
grab on to the rubber duc antenna. It definitly improved reception.
Even with those lowpoints it continues to run fine after many years and
I still do use it.

By chance do you need a wall dc adapter charger for it ? I have an extra
one .
Charge is only for shipping. I just dont need 2 !

how can I attenuate my antenna 100-120 db..??

I've tried 4- 20db. in-line attenuators, & this isn't enough... not to mention I've run out of space at the antenna input..!!... I've looked in sevral reference books, but cannot find a 'formula' for attenuation.

I need to monitor a cordless phone, & eliminate same nearby freq... I'm already using a directional antenna.

thankx.... Rob.

: It was on the top with the rest of them, sure is a lot of diodes in
: there, you have to wonder what they all do, that had to be the easiest
: mod I've ever done!

The text below may be useful to you

PRO-2004-400 CHANNEL and SPEED MOD
On the top of the sub-circuit board, locate the slot for D-513.
(the diode that gets removed to unblock cell)
Count backwards from there until you get to the space for D-510. Install a
diode at D-510 in the same polarity as the rest of the diodes. There, you
now have 400 channels instead of 300 ! Now install a diode at D-514 and
you have increased the scan speed to 20 channels/sec from 16 ch/sec.
Carefully re-assemble the metal box. Make sure everything else is as it should
be.

A "triumphant" return would be one that would be able to demonstrate a "victory" of some sort...or "success" in some endeavor.

I have been gone from this newsgroup for about 10 months...but the same anti-Bill Cheek crap is still being written by a very small number of antagonists.

Bill Cheek has arguably and demonstrably performed more service to the enjoyment of scanning than any other individual in the world. That fact irritates some.

Let them be irritated.

Hi, the Yaesu FRG9600, once among the top-end receivers of its time (the ICOM IC-R7000 packed a lot more functionality but was priced somewhere twice as high, I believe), for today's standards is a true low-end piece of antique; no full 900Mhz coverage, an extremely noisy AM, even at closed squelch, poor SSB, very low sensitivity (you may need an active antenna but then the ATT needs to be activated again because of much intermodulation, absolutely nothing more than plain receive and memory-scan (low speed), though, with some nasty programming with (I seem to remember) channel pairs ending in 0 or 1, you can get it searching between boundaries. If I were to fall in love with its look and sturdy feel, maybe $100 would be a nice price, but why not spend a few bucks more for the first best handheld today which improves on virtually any feature of the FRG-9600 except for using it as a heater (the Yaesu takes so much power yoy can even warm your hands at it ...). Take care of your money. Brgds, Aad

Must be kidding to spend time on such a sale ... if you want a new one it'll cost you $305 (Bandercom), and accessories like leather (?) cases and schematics never add to the price of used devices, even in mint condition. Anyway, if you have it sold, please let me know. Maybe you may sell some stuff for me too, getting me rich ... haha

Depending upon how the antenna is engineered, it could work well - or
not so well.

I suggest you buy an inexpensive adapter to convert the PL259 of the
antenna's coax to the BNC of your scanner. I know that Radio Shack used
to sell these.

Hi Vinny,

Okay, it is seldom if ever necessary to attenuate a signal 100dB! The way FM receivers work is that one signal HAS to be 6dB stronger than the other before the receiver will "capture" it. If you attenuate both the signals, even 100dB, they will still be less than 6dB apart. The directional antenna will help, but only if the two signals are in two very different directions. I've found that the bulk of attenuation in a direction antenna, with reasonable gain, is off the side. So perhaps if you put the side of the beam to the unwanted signal you might do better.

If you are listening to cordless telephones they are probably so close to your antenna that it will be difficult to aim directly at the wanted signal.

> please let me know what type and where I can find it.

Much RG58 coax has very poor shielding - and this *could* be the cause
of the noise. You may want to try a coaxial cable that has 100%
shielding. The RG58 I have has a foil jacket. However, some computers
like one of mine spew out noise that I can hear all the way at the
bottom of my driveway on my repeater. If your antenna is only about
30ft away this could be the cause too. Also, you may want to ensure
that your antenna is grounded well - and by this I mean grounded at the
tower end. If it isn't this could increase the noise level too.
Contrary to popular believe, I wouldn't recommend grounding your tower
AND your radios in the shack. Just ground the tower (I can expand on
this if anyone is interested).

Cheers!
Andy

123. Sell outright or Trade for Drake/Yaesu

Newsgroup: rec.radio.scanner
Date: 1998-10-02 00:00:00 UTC
From: #mstr-jl@swbell.net
Message-ID: <361804a0.12774191@news.swbell.net>

I'm looking to purchase a Drake receiver (R4 A B or C) and a Yaesu FT-990 - Units must be excellent to mint only.

I'm also clearing out the items listed below - a partial swap is ok if you have a radio I want.

The following gear and materials are all in excellent condition. No C.O.D's. Some help on shipping - advise zip code in reply. May negotiate price on swap - otherwise prices are firm.

Diawa CN-101L SWR/PWR meter (15w/150w/1.5kw) - Xlnt - $70
Emco PS-12 10amp HD Power Supply - Xlnt - $25
Oskerblock SWR-200 SWR/POWER Meter - 52/75ohn switchable - dual meters - Xlnt - $55
Kenwood SW-2100 SWR/POWER Meter - dual meters - matches TS-870 - Mint - $90
Alfa 7705 Capacitance Meter - with case - with leads - Xlnt - $40
RS Pro 2041 - 400 chnl scanner - Xlnt - no cell - $175
RS 2032 (NETSET) - 200 chnl scanner - Xlnt - receives cell - $200
RS Pro 2039 - 200 chnl - Xlnt - no cell - $150
RS Pro 33 - 25 chnl - Very Good Cond. - $50

Buyer pays shipping on books and tapes - give your zip code in reply.

Code Study Tapes - Study Guides - Computer Study Disks
1. 8 tape set - Gorden West Radio School. 4 tapes Novice code class and 4 tech/general theory tapes. - $20.
2. Gorden West (RS) Novice Voice Class License Preparation - consisting of two tapes and a study manual. $15
3. W5YI - Ham Operator Computer Study Course. Covers theory and code - novice to extra - includes guide & computer disks (IBM) 3 1/2 & 5 1/4 disks. $20.

Books (Antennas)
4. Transmission Line Transformers (Jerry Sevick - W2FMI) - $5 SOLD
5.The Radio Amateurs VHF manual (ARRL) - $4
6. The ARRL Antenna Book (ARRL) '88 - 15th edition. - $12
7. The ARRL Antenna Compendium (ARRL) vol. 1 & 3 - $9 each
8. W1FB's Antenna Notebook (Doug Demaw - W1FB) - $6 SOLD
9. The Quad Antenna (Bob Haviland - W4MB) - $10

Books (Amateur General Topics)
10. Standard Radio Communications manual (Radio Test Procedures and Instruments needed) $14
11. Radio Communication Handbook (RSGB - Great Britain Radio Society

(similar to our ARRL Handbook)) - $14
12. The ARRL Operating Manual (ARRL) 3rd edition - $13 SOLD
13. The ARRL Radio Buyers Sourcebook (ARRL) - $10
14. Understanding Amateur Radio (ARRL) $5
15. Solid State Design for Amateur Radio (ARRL) 12th edition - $9
16. Hints and Kinks (ARRL) 12th edition - $5 SOLD
17. ARRL Electronics Data Book (Circuit Design) - $9
18. The ARRL Handbook - $15 SOLD
19. Amateur Radio Encyclopedia (Stan Gibilisco - W1GV) - $15
20. Popular Circuits Ready Reference (John Markus) - $10
21. Communications Circuits Ready Reference (John Markus) - $10
22. ARRL Volunteer Examiner Coordinator Manual (ARRL) - $8
23. Latest Intelligence (Codes used by Gov, Law, etc.) - $12
24. QRP Notebook (Doug DeMaw W1FB) $4 SOLD
25. QRP Classics (ARRL) $9 SOLD

Inquiries welcomed.

Per the San Jose Mercury News:

An emergency drill is scheduled from 10AM to 1PM Saturday (10/3).
It is supposed to simulate a nuclear, biological, or chemical threat.
The activity will start at the block bordered by First, Hedding,
Mission, and San Pedro (i.e. the Civic Center).
The FBI was mentioned in the article but it wasn't clear if they would
be involved.
The following hospitals will be involved - Alexian, SJ Medical Center,
Good Sam, O'Connor, Valley Medical Center, and Kaiser Santa Teresa.

>Thanks for any info in advance.

I also bought the same scanner to listen to the race drivers. I got mine for a heck of a lot more than $179. Mine was $285 through an advertisemenet in my Nascar magazine. I got a Race-tenna with mine though (whoopie - a $12 value).

I have heard the same thing about the manufacturer making it so that it can not be modified. I do not know if this is true or not. If anyone does know, please email pittstudnt@aol.com with any information. Thank you.

Source record: 142610

all I know is the four-20 db. attenuators [these are small, in-line devices, used in cable-TV work] help a LOT... the signal I'm trying to eliminate is now so weak after this attenuation, that it only breaks thru the squelch about half the time... my target receiver is still strong, & static-free. I figure another 20-40 db. [based ONLY on what I'm using currently] should completely eliminate the unwanted signal... problem is, I only have four of these things... not to mention I have no more room to add another, anyway.

Do you know HOW an atenuator works... can I make a 100 db. attenuator, myself..??

thanks for writing.... Rob.

I know at one point, Ohio was dreaming up a Multi-Agency Radio
Communications System for 14 different agencies. It seems the bids
have been a little too high, and such as system won't be build anytime
soon. It is possible though, that this center uses the Columbus
Trunked systems, just a thought. For more info on MARCS, go to my we
site here . . . . http://eng.utoledo.edu/~jpryor/scanner/marcs.html

Hi Vinny,

Read my reply again as I think you missed the point.

Cheers!
Andy

Heh, heh.... yeah...

I would love to be a fly on the wall when that email comes in... I can just hear it now:

"This guy wants us to do WHAT?!?! Gimme a break!"

Ahh, well... it is inevitable, isn't it?

I noticed that now that Bill Cheek has been chased away, he's focusing in on Bill Conduit. What's the matter John? Don'tcha wanna play anymore?? Muwahahahaha.....

Yes, I think you are right, Bill. However, it IS entertaining, however briefly, to reach out and bash him on the bean for no apparent reason...

One just has to make sure that it is done tastefully, and in a non offensive manner, so one's ISP has no basis for carrying out his insepid demands.

But yes, we do give him his reason to live, don't we?

You know what that means, John. You'd better play nice or we'll leave you all by yourself....

-Phil

>The BC9000xlt is a terrific radio, but I think for most people the 895xlt is a better buy.
>
The 895XLT is a good radio, no doubt, but it has different features than the 9000XLT. You don't get 500 channels, you don't get alpha-numeric display, and you don't get user selectable receive modes, and that can be a serious problem for the military monitor.
It's really not an apples to apples comparison. They're both great radios, but they need to be evaluated on their own merits, and not in comparison.

What are you popping your zits
on fellah?

I want you to go to school and learn
how to read right. Unless you do you
facile-smirk you will show everyone here
what an "obstacle you are" to mankind.

who compared the cheek guy to Hitler? You
probably did. but then that explains your
education and the speed limit of your IQ-Less
remarks...

your being so open about your stupidity
is amazingly true. It's authentic and it
is indicative of your age: i give you 17
tops.

i prefer not to waist my time with
high-school stumble-bumbs. Too busy
looking in the mirror for their
identity.

hey balloon brain...there is another
post for you, should precede this one.

u really are that stupid as Bill has told
us u are. U really believe this crap
you wrote is from an "open mind" stuck in
the mire of "pig shit".

You missed the point. But i am sure that
others got it.

Passing the ball on to another hole ain't
going to make it smell of mackeral. Your
being alive is the crime.

To think that some festering ass
as yourself did to Bill Cheek
what your fallacious claims seems
to have found a similar boner to
pull on.

you are not healthy. needs great amounts
of help= it's called makey-iatry.

you truly are a legend in your own
mindless-sphincter. It grows to see
how short it gets.

You guys don't have Customnet13 numbers there do you? Such an inferior telephone system. If you did you could allocate an easy to remember 13 number for your non emergancy police calls.

Check out Radio Shack for close out on PRO 2042.
IMO it is a slightly better scanner for a better price on
close out. It also has the availability of the Opto
board if you ever wanted to add it.

Hi All,

I have a Icom R7100 for sale. I am asking $800 or best offer plus shipping.

I also have an AOR AR2500 scanner for sale. I am asking $300 or best offer plus shipping.

If interested please email for more info.

Thanks,

Steve

barryo@XacayX.com.au (Barry O'Grady) wrote:

>Why not standardise on 000?

Barry,

You're missing the point- we can standardize any number combination we want here in the US- this is not a technical issue (in theory, all of the calls can be remote call forwarded to anywhere with a few keystrokes in electronic switching), but anything that requires the construction of new infrastructure will cost our taxpayers HUNDREDS of MILLIONS of dollars nationally.

Some of us (myself included) feel that:

1) there is an inherent failure to completely educate the public as to what is a "non-emergency" (just look at the frustration most people share here);

2) once we got 9-1-1, we forgot we had other telephone numbers that we have had all along (MY official car has a "9-1-1" sticker on it but not the seven digit number, and no, I'm not empowered to change our decals);

3) we made such an effort to "educate" young and old with coloring books and stickers about calling 9-1-1 that we forgot to put the other numbers on the literature (you can pre-print tons of "9-1-1" coloring books but each seven digit dial number means you must reset the presses);

4) telephone companies -and not the actual communities- may be the impetus behind "3-1-1" or "000" or whatever, in the drive to create a new market and sell tons of new infrastructure. The danger is that a small community would not be living up to national "standard of care" by failing to install a 3-1-1 system that parallels their 9-1-1.

Naturally, if we tell people that our number is 9-1-1, that's what they're calling! Can you blame them (both the "smart" & "stupid" callers)?

Now comes risk management- if a big city creates a standard, and it becomes the de facto national standard, is it cheaper in the long run to follow along or stock a warchest for possible litigation because someont is too lazy to look up the seven digit numbers to report a car blocking their driveway or loud music and then sues us for not having

"3-1-1" and "educating" them when they call on 9-1-1?

Or, is it cheaper and more effective that we educate the public during "community policing" and when responders mingle with the public by having our local seven digit dial numbers on our vehicles, stationery and the trinkets we hand out or mail?

Here, the agencies are billed for 9-1-1 service that the telcos provide. Each new mandate looks toward the PSAPs funding the emerging technology. In turn, PSAPs pass this along to their community by user fees on telephone devices and taxes on personal property or other items. Many PSAPs have struggled to fund and staff their existing operations. Can the camel support more straws? Again, there are NO chivalrous actions from the involved telcos or from the FCC.

Is it there because WE SAY WE NEED IT? -OR- Is it there because SOMEONE OTHER THAN THE PUBLIC SAYS WE NEED IT?

Steve

170. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6v1m9g$52e@news.Hawaii.Edu>
Source record: 142651
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

Replace the RG-58 coax with RG-6QS or even better RG-8. Both are
available from RadioShack, although your local amateur radio dealer
would probably be more helpful to you. You should also make sure your
ground is up to par.

Sounds ok I guess. Is it much bigger then the RadioShack discone?

but it was the same stuff over and over and it just got tireing. I then
picked up the crystals for BART and it took me a while to catch on to
what they were talking about. I stopped scanning for a few years, then
picked up a programmable one which got me back into it. I started
listenning to BART again and caught onto what they were talking about.
BART has a great repeater system, as I can hear them whereever I travel
in the Bay Area.

> I bought my scanner primarily for listening to railroads. I can hear

I've tried to listen to CALTRAIN, but I just can't pick them up. I plan
on getting a roof antena soon, and hopefully that will help. I've
listenned to MUNI and AC Transit, and they were as I figured, and I ended
up loosing interest with them.

>

I bought my Pro-64 to listen to the planes, and I pickup SFO's tower
with no problem. I listen mainly to the Oaklannd Airport since I work not
to far from it. One fun one to listen to aircraft wise is the KGO Traffic
crew. At times that get real silly when they aren't doing reports. They
also have a very strong signal.

You would be better to set up your search range from 26.Mhz to 29.Mhz
Most scanners that cover that range will fly through it all. You will
have the benefit of hearing people with modified CB's (most) and you
will free up those channels for more important freq's.

26.965Mhz-27.405Mhz search range if you have a slow scanner or want
just the reg 40 + a few splinters people hide on. Get a good long high
antenna for it, you will be surprised by what you find in this band!

>because they are seldom used, and not miss much?

You might want to concentrate on channels 1-23. Maybe everyone else
has moved on, but I still use an old 23-channel Cobra when on road trips.

Also, Channel 9 is "supposed" to be reserved for emergencies. Then again,
you're not "supposed" to run 500 watt linears on CB either. :)

An ex-trucker friend of mine once told me that there was some kind of
loose channel system, like even channels for east-west roads and odd
ones for north-south roads, with 19 being the "all-call" channel. Don't
know if this is used much, though.

I would for sure include everything right around 19. When I listen to
19 on road trips, two truckers often agree to move up or down one or two
channels to get a less crowded frequency. I would say 17-21 for sure
and probably 15-23.

Good luck!

The BC9000 is a great scanner, Don't let any one fool you about that. It
is also available in stock for as little as 330 bucks .
Despite what people say about it being hard to find. And that is NEW,
not re-conditioned. The Radio Shack Pro 2042
is also a good scanner, It has different features, But now a days The
chances
of finding one thats Ok New in a store
is very slim. If at all possible the serious
scanner fanatic needs to own both.
Good luck
Dave

Hi Chris,

>I know this is proberly a re-badge PRO scanner,
>So if it is can anyone tell me which one.

The COM213 was manufactured by Uniden for Altai but doesn't have a "direct" RS PRO-xx equivalent. The COM213 shares pretty much the same case with the COM216

It is no longer a current model with them [Commtel] though. They introduced the COM214 which again is a Uniden model similar to the UBC-220XLT and powered from a Nicad pack rather than AA batteries.

Trust this helps.

And tons of scanner related advice he did indeed give. He posted a boatload of stuff about scanners. Very handy and informative stuff. Then there's the crap you post; by the boatload.

Before I forget, what's that "we" stuff? Who is "we" loony boy?

> This problem was in

Evil tactics? Clutches? What are you talking about?!?!? You mean like your forgeries and cancels issued out of open servers? Like when you went 30 miles up the road to Clark County Community College and used their stuff? You mean stunts like that? Ya little sicko.

And what's this "we" crap? Who is "we" loony boy?

> Unfortunately, there were a few individuals who
> support the person who caused the problems on this NG, & attempt to make
> excuses to justify & rationalize his behavior.

Ah....look at you. You appear to be walkin' a pretty narrow line nowadays. Can't post like you used to? Had a discussion or two with your ISP? So you're gonna use the opportunity to lie your way into immortality? Is that it? Got nothing to do, no room for error, not even room for merely annoying posts. Nothin' left to do, but *lie*; and lie with GUSTO! Eh?

BTW: Did'ja explain that "we" stuff to us yet? Who is "we" loony boy?

> Funny, then why is it that Bob Parnass never receives any of the
> problems
> that you mention above? Apparently there are serious flaws in your
> above theory.

Not really loony boy. Bob seems to be pretty choosy who he responds to. Nothing wrong with that. (But it ain't like I've seen him strike up any conversations with *you* loony boy.)

So what's that "we" stuff all about? Who is "we" loony boy?

You friggin' loon.

I have not seen the Oct. issue. But I am interested in the
AR8200. It seems to be the best available at the moment.

I still have not seen one for sale here in the US.

Thanks to those who have responded with this answer. That is what the
previous owner told me. I just believe that the unit will work better
under all circumstances if the AGC is hooked up.

Perhaps someone can explain how this phone gives 'twice the range of 900 Mhz spread spectrum phones' [I think I am quoting the site correctly], when one half of the conversation [handset to base] is, in fact, via 900 Mhz spread spectrum? Just curious...

One way I've found around the 50 ID scan list limit is to program more than
on bank with the same system. An added benefit of this is that you can
use one of the banks to search for new IDs (locking out IDs as identified)
and use the other bank to search all IDs. Also using two banks gives you
10 scan lists.

There is no comparison between the PRO2006 (triple conversion) and the PRO2026 (double conversion). I currently own a PRO2006 and owned a PRO2026. Due to the PRO2026's double conversion I got a lot of interference from cell phones while trying to monitor 800Mhz systems. Driving anywhere near a cell tower was a major pain. I eventually sold the PRO2026, bit the bullet and got a PRO-26 handheld which I use as my portable and mobile.

The biggest complaints I had with the PRO2026 besides image rejection was the limited number of channels (100) and limited frequency coverage. I guess if you were in a more rural area the PRO2026 might make a more decent scanner. Also could not beat the price at the time, $150.00 brand new.

I don't know why you "need" to monitor a phone. Anyway, depending on what
the interference is, you would probably be better off with a bandpass filter
tuned
to the frequency you wish to receive. Simply installing attenuators kills
all signals.
On the other hand you did not mention whether the attenuators cut a
particular
band or all bands.

In America, Barry, there are still a few wild and wooly things we can do legally, like owning transmitters, or publishing subversive information.

> I think you will find that your unlicensed transmitter can be seized.

Not in America, at least not for mere possession. Why would you think so?

> I remember reading about someone losing their transmitting equipment
> but I couldn't find any referance on the FCC web page.

Get back to us when you can substantiate your recollection. (Most likely it was someone who was being charged with an offense by the FCC, and the seizure of equipment was incidental to that).

I have a 2026 , one problem I found was the service search for the police band. So many freqs included that it took more that a minute (seemed like 5), to cycle once through. Other than that, not a bad scanner for a dbl conversion.

Should be possible.

Better give up on the idea of weather satellites - they may be gone for
good. This is the first major threat of our satellites getting hit since the
start of the space age. There wasn't much up there in 1966 but now. Who
Knows?

Reports that I read say that satellites will be "sandblasted"! In 1994 a
satellite went offline when a Persid hit it.

Also it may be the electric charges in the atmosphere that will kill them. I
am wondering if it is a good idea to buy expencive HRPT equipment now and
just buy a new 137.XX reciever.

Brendan.

226. 4Phun-Scanning List- NEW

Newsgroup: rec.radio.scanner
Date: 1998-10-03 00:00:00 UTC
From: Victor Healey <fourphun@bellsouth.net>
Message-ID: <x3vR1.785$717.3012139@news3.atl.bellsouth.net>
Source record: 142494

You are invited to consider subscribing to an ultra modern mail list that will allow the discussion of advanced topics related to radio communications. It is not meant to replace the value of this newsgroup and the list is not for everybody because it has been set up slightly different from posts to USENET.

First the topics covered are anything related to high technology with a special attention to wireless communications. It will allow discussion of GPS, CELLULAR, and anything else including topics like spread spectrum signals. If you plan to post some of the normal things found on this newsgroup. We hope you will consider cross posting via CC to the new list for those who are not readers of this newsgroup for one reason or another. Care should be taken when doing so in that multiple copies of your message are not forwarded.

Currently you may subscribe yourself and unsubscribe yourself to the new list without anyone passing judgement on your merits. It is all done by the host software. A number of moderators have been selected because of their maturity and balance to make sure flame wars are quickly put out. We will not throw you out of the list but we will not tolerate flame wars. If there is a problem we plan to make it so that you may only read posts for a while. That is until you cool off if a moderator thinks you have gotten a little too hot. We also are limited by the agreement with the host hardware provider who will not tolerate commercial SPAM for any reason. The list is advertiser supported and the host hardware and software costs us nothing. for that reason

Now for the biggie. This mailing list software is modern enough that we can support HTML. We can support those little vcard attachments you can send using modern software. It will support PGP and other security technologies - we hope. Your posts may be in plain text or HTML. We do not care as long as the HTML is Microsoft compatible with OUTLOOK 98 or OUTLOOK EXPRESS. If you can not handle HTML then this new list is not for you until you acquire the type of software needed on the client end. We have tested it with Eudora and it seems to work correctly. Email from this list may have the AOL look to them and be more visually pleasant to view. It will all depend on the care and thought that goes into the various posts. HTML supports charts and frequency lists quite nicely. It also allows for the occasional cartoon and picture of the electronic devices we are discussing. This is you chance to move ahead with some of the new Internet technologies that are available now but which has seen only spotty use do to obsolete software that is so prevalent on many machines.

If you crosspost valued information between the new list and other lists or USENET use plain text only. You have to go with the lowest common

denominator on a cross post. It is your responsibility to obey the rules of any list you subscribe to. You could of course convert your bland text documents to eye grabbing HTML posts by copying the text to a modern mailer and then applying various text attributes or inserting pictures and other items.

So how do I subscribe you may be asking? Using your web browser go to
http://www.onelist.com/subscribe.cgi/4phun-Scanning
and do it right now. You may unsubscribe just as easily using your browser or put the list on hold to stop the mail without unsubscribing while away on trips.

You may use a web browser to post from any machine or you may post from your own PC using your favorite modern email software after you are recognized by the host system. It takes an hour or less for the host software to set up your free account and confirm your identity. If the volume grows on 4phun-Scanning to be too much we plan to split it into more logical lists to help you manage the data you are looking for. But for now come and have FUN on 4phun with your favorite hobby.

Please post this invitation in any area where you feel kindred souls may lurk.

Thank you

4phun

mailto:4phun-scanning-owner@onelist.com

227. Kansas Column for October 98

Newsgroup: rec.radio.scanner
Date: 1998-10-03 00:00:00 UTC
From: Andy B <andyb@qni.com>
Message-ID: <3616574A.4B7A@qni.com>
Source record: 142495

Kansas Column 10-98

1. Great Bend and KS State system update
2. KHP simplex freqs Douglas County area
3. Wichita Scanner web page
4. Some finds from Bob for KS State & others
5. Leavenworth Counties new FD system
6. Chanute stuff from new reader
7. Shawnee County/Topeka trunked system details
8. Hutchinson & KLETC (KS Law Enf. Training Center)
9. KS centralized dispatch update
10. Garden City going trunked?
11. Fleetmap for Reno County from another new reader
12. KS State EMS phone patch?
13. Tower for sale!!!!
14. Lightning takes is toll in Johnson County
15. More Trunked system outage info for Douglas County
16. JOCO trunked question. New talkgroup?
17. Get together?

1. Doyle sent an e-mail with some information from the Great Bend area. There is no reason for me to change what he said, so here it is:
"Went to Hoisington (North of Great Bend) last night for birthday supper. Coming back I discovered (duh) there was a new tower about 4 miles north and 1 east of Great Bend (about l east of 281 highway) that appears to be another new KHP/DOT tower. I haven't been north of Great Bend for some time. It has the familiar giant rubber duck antennas on top so I assume it is a state tower. I don't know why right off they had to put up a new one, they have a tower just on the east side of Great Bend where the DOT station is located, but guess they needed a new one. Can't put new radios on a old tower. I don't know if any of their new towers out here is working yet, don't know frequencies and don't know anyone to ask right off the bat."
I assume they are 800 MHz antennas, so it might be a good idea to enter all the 800 frequencies that are licensed to the state, and sit there for hours on end every day of the week until they come to life. (Wouldn't it be nice to have the time to do that?) I think I'll insert that list of 800 frequencies here, in case someone is interested. They are probably listed somewhere in one of the back issues of the KS Column, but hard to tell which one. Some have the agency listed, some do not. Speculation is that some/all of the blanks will be statewide EMS.

866.1000 KDOT
866.1250

866.1500
866.1750 KDOT
866.6875 KHP
866.7125 KHP
867.2000 KDOT
867.9125
867.9375 KHP
868.1750 KDOT
868.4000 KDOT
868.4250
868.5875 KDOT
868.6125
868.6500
868.6750 KDOT
868.8375
868.8625 KHP
868.9000
868.9250 KHP
---
2. It makes sense to me to continue the trend of letting the contributor's e-mail speak for itself. (That, and this is being edited on September 30ï¿½the day before the "deadline" for getting the column out. If it streamlines the process, I'll use it!) Bob from Tonganoxie heard some comms that are of interest to those of us interested in how all these NPSPAC frequencies are being organized:

"About a week ago I heard a Douglas County sheriff's unit call a KHP mobile in the Clinton Lake area simplex on 868.8625 (the local KHP repeater output freq.). The trooper replied simplex also. Interestingly, neither mobile transmitted the DCS (DPL) tone of the repeater. Luckily I had two receivers going in the car, one with DCS and the other without. The transmissions were all full-quieting on the tone-less receiver but blocked on the tone receiver. The conversation went on for several minutes. SO, for car-to-car simplex work the radios are set up to use either no tone at all or some other tone than that used by the repeater on the same channel."
Bob always comes up with such amazing details. Lots of folks might not go to that great length to uncover such intracacies. Thanks, Bob.
---
3. A fellow from the the Wichita area sent a note to the other Bob, and he forwarded it to me. Bryan has a fine web page for the Wichita area that includes more than a simple list of frequencies. Check out some graphics, maps and speed trap information when you visit it.

http://members.tripod.com/~crashfirerescue/scan.html

I suggest you visit the site if you plan of visiting the area. Thanks for letting us know about it Bryan.
---
4. The other Bob spent some holiday time like any good citizen shouldï¿½by scanning! I'm going to insert the list of Bob's finds here. Some of

the information might be already reported in the past, some is brand
new. The column for tones is definitely new. Read and learn.

FCC# frequency tone use (according to the Ks NPSPAC guide)
------ ------------- ------ ------------------------
652 866.6875 143 statewide (Olathe KHP tower)
654 866.7125 223 statewide (possibly Huron KHP)
800 868.6125 054 statewide (Paola KHP)
805 868.6750 412 statewide (Bonner KHP tower)
820 868.8625 306 statewide (Lawrence KHP tower) also was hearing
GPS data here
727 867.6750 466 unassigned (KU in Lawrence)
702 867.3375 754 Douglas co
601 866.0125 151.4 NPSPAC calling (heard plates 28/29s etc- JOCO ?)
755 868.0500 565 Douglas co

Some other stuff that was monitored as well:

159 854.9625 025 kck fire south tower
189 855.7125 025 kck fire east tower
170 855.2375 025 kck fire west tower
all tones listed above are dcs(DPL) except the NPSPAC calling ch.

Also the raytown pd has been on this set of freqs for awhile:
Motorola- Type-I using the E1P1 fleetmap, syskey id: 1A19(old nextel id)

854.9125, 855.1375, 855.3875, 855.7375, 855.9625,

856.4125, 857.4125, 858.4125, 859.4125, 860.4125

Also heard some stuff on the following freqs. unknown as who the
agencies are yet:

freq possible agency use/loggings
866.0750-- pd traffic
866.2625-- pd traffic / data as well (possibly KHP)
867.3875-- polled data of some kind (sounded like a GPS system)
867.9375-- data unknown type
865.8625-- LTR [trident controller] phone patch (callee answered radio
as 'campus security', caller was
asking if student union & other bldg. was open)
864.9625--Motorola data channel
864.8250--nextel Iden data channel
864.8125--LTR idle channel data bursts
864.7750--nextel Iden data channel
864.3875--Motorola data channel
864.0875--Motorola data channel
863.8250--nextel Iden data channel
863.7375--LTR idle channel data bursts
863.7000--nextel Iden data channel
---
5. More from Bob about the new Leavenworth County Fire/EMS system that
should be operational by the time this hits the newsstands.

'The following channel plan has been agreed to by the County Firefighter Association. They ask that the first 7 channels be programmed as follows:"

ch rx freq tx freq tone use
---- ---------- ---------- ------ -------------------------
01 154.3850 150.8050 172 Main fire dispatch
02 154.3850 154.3850 172 Fire talk around
03 153.9500 153.9500 172 Fire TAC #1
04 154.3100 154.3100 172 Fire TAC #2
05 154.2800 154.2800 CSQ Fire Mutual Aid
06 155.8200 153.7850 114 EOC repeater
07 155.8200 155.8200 114 EOC talk around

The above tones are Motorola DCS (dctcss), CSQ is carrier squelch (no tone)

---

6. I received a note from M. Myers, who hails for the Chanute KS area. He said he enjoys our column, which makes the effort seem worthwhile. He offered the following rundown for frequencies in his area. I wouldn't mind getting a report on the new KHP 800 setup from that area. (Wink wink, nudge nudge.) We needed some information from the southwest part of the state. Thanks!

Chanute PD 158.790 repeater
tac 3 155.490
city trucks 154.980
city fire 153.980 repeater
hospital 155.400

Neosho Co SO 158.835 repeater

Chanute area amateur radio club repeater 146.745

---

7. I did it again. I got an e-mail from someone, copied and pasted it to the column for editing, and promptly forgot who sent it. My punishment? How about censure! Noï¿½that's for other crimes. Perhaps a good thrashing with a length of coax. Regardless, the information is here. Thanks to whoever sent it in.

"Your very informative list of last month on talk groups (for Topeka/Shawnee County trunked system) did not include 3600. Have heard it infrequently. It's probably for surveillance, judging from the conversations which were not encrypted."
"Talked to a homicide Detective at a recent football game (you can always tell plainclothes officers who are working off duty, by the fit and look of their uniform.) He said Robbery and Homicide each have an encrypted channel for secure conversations. He also noted that their radios have up to 10 telephone numbers programmed into them for calling the office or the "old lady." The RS Pro-90 skips those phone calls when in trunked mode. But you can pick them up in the regular scanning mode. The detective and all other cops I've monitored don't say anything important in their 'cell' calls."

I had to laugh about the comment about off duty officers and their uniforms. I've seen the same thing, just never thought about it before.
---
8. Don had mentioned a couple of frequencies in an earlier e-mail to some of us, but didn't have all the poop on them. Shortly thereafter, he sent the following note:
"Just figured out I had mapping software with coordinates! DUH! The 854.9625 and 855.4875 repeaters are on the same tower. The coordinates are smack in the middle of the old airbase SW of Yoder,
where Collins Industries builds ambulances. There are several buildings out there. I wasn't aware of any State activity, HOWEVER, it is only a stones throw to the KLTEC.....you know, the cop academy?????? (I know KLETCï¿½I spent a year there one 8 week period. Andy) and I understand they ARE doing radio use training out there now. I didn't look in Sedgwick County yet, but you will notice the exact same pair is licensed there as well."
Thanks, Don.
---
9. Dale had the following about KHP and centralized dispatch:
"Motorola showed up at Troop E today to install the new Windows NT dispatch console, basically just a PC and they wired it into the T1circuit for central dispath. When they did that they brought up the dispatch screen for Troop A and we were listening to the KHP comms in the KC area. The radio tech talked to Lenexa on the UHF mutual aid channel (probably 460.100 and 453.450) and we were listening to other par ts of the state. Now if I could just get that over to my house."
"The state 800 tower in Rush county is complete. It stands at 400' about 2 miles south of Rush Center right next to US 183. With the install of the equipment today Troop E is one step closer to loosing our midnight dispatch to Salina. They are talking now that this will take place in November BUT this has been moved back how many times now?"
"I am hearing more and more about the statewide 800 system being switched to a Smartzone trunked system all the time. One of the high ups at KDOT here in Garden City talked to our radio man about it and it sounds like it has a good chance of coming to be. Now they don't know how to divide the state for the 2 Smartzone controlers. First it was North and South and now its being said a Smartzone controler for each region (3) so who knows for sure."
"We heard today that the khp is going to approach the legislature in the next session for money to install MDT's in some of the cars that are on 800 mhz. I guess there are alot of other states calling kansas to see how their system is going. They are saying kansas is on the cutting edge and way ahead of alot of states. Now that's scary to think that the state of kansas is on the cutting edge!!!!! Also troop D is scheduled to loose their midnights during oct and troop E 30 days later. I guess they were talking to troop d cars the other day from salina and it was nice and clear and worked well. However, the tension is building as the time gets closer as to how its going to work. I got ta tell ya that the use of gps in cars is becoming a very controversial issue in the patrol. We had a snow meeting out here in garden city last week. minnesota dot was

here and talked on the use gps in their trooper units and snow plows and they really like it. they say it is alot easier to coordinate ops with the gps. They joked about the nick name they call the gps in cars, They call it "Lieutenant in the trunk." that's why it is such a hot topic in the patrol.I was impressed when we were listening to troop a and the kc area trunked systems in garden city though.....later

---

10. "The City of Garden City excepted a bid from Franks Communications for a 800 system for the city utilities, no public safety for now. This is the Kenwood system. This guy alrady has trunked system here in Garden City. A big Electric co-op in SW Ks scraped its entire VHF Hi system to go to this 800 SMR. There is a 300' tower on the west side of Garden that belonged to this electric company and they gave it to Sunflower Electric who in turn donated it to Garden City for this 800 system. I just hope the rest of the city doesnt go to this. It is a weird system for a trunked system. The electric company always comes up on the same frequency. I havent figured out all the frequencies yet but I'm working on it.

---

11. New to our list is Daniel, who goes to K-State in Manhattan. He listens with a PRO-90 TrunkTracker, a Regency M100, PRO-2046 and a BC 350A. Obviously, with the PRO-90 he has been listening to the states trunked system. He has figured out the fleetmap for the system. Personally, I feel that finding the correct fleetmap is the hardest thing about trunk scanning. Thanks to Daniel for going to the effort to find it and to share it with the rest of us.
Before we get to the fleetmap, Daniel would like to exchange notes with anyone that is from that area. Anyone out there? His e-mail is dvk7468@ksu.edu

KS State fleetmap for the Manhattan/Riley County area:
0=d
1=d
2=c
3=c
4=i
5=i
6=0
7=0

Last, he reports that 159.150, 39.400 and 154.785 are still active during games. The first is for traffic control, the latter two for normal use.

---

12. More good poop from Bob from Tonganoxie:
"The state phone patch system I outlined in last month's "column" has an active transmitter on the Bonner Springs tower. It uses 867.1625. I just heard it come up with an unanswered ringing. It's the same sound you hear on your own phone when you dial someone and it's ringing on the other end. I've heard such unanswered calls on the Lawrence repeater and now the one at Bonner. I still have no idea what the purpose of the

system is, unless it has something to do with EMS as it seems to in western Kansas. "

---

13. David sent this to me. Some of you might be interested. I amï¿½but I don't have the funds nor permission to get it. Here goes:
TriEx H470 70' tower for sale.

This is a 4 section guyed tower, including guy wires, turnbuckles, equalizer plates, rotor plate (drilled for Yaesu and HAM-M) owner's manual, etc. The tower recently lost a guy anchor and was pulled over by the other guywires. It is now telescoped to about 20', and is ready for pickup in the Kansas
City area. It weighs around 500#. The tower needs a new base plate, and the bottom section legs need to be sleeved about 3' up from the base. Other than this the tower is in good shape and was recently painted. If you can weld, this tower can easily be salvaged (I don't have welding equipment or skills). $250, pickup only.
email: cslc82@email.mot.com

---

14. The KC Metro area got hammered by an industrial strength thunderstorm last week. When people describe something unusual, they have a tendancy to say "That was the worst I'd ever seen!", even if it really wasn't. When I say that I don't remember EVER seeing that much electricity in the air, I am not stretching the truth. It was flat impressive.
About 5 years ago, my tower got hit by lightning. I was fast asleep when it happened. Upon hearing the sound which is commonly associated with an exploding atom bomb, I shot out of bed and began running laps around the bedroom walls approximately 3 feet off the floor with the intent to build up speed so I could make an appropriately hasty exit through the nearest door, window, or hole scratched through the wall. It took a few seconds to realize that the house had not blown up. My wife, Lois, said I looked like I was in a panic. She obviously didn't recognize the fact that I was attempting to find an avenue of escape for her, with little regard to my own well being. She often confuses heroism and valiance with panic. Anyway, I lost most of my radios, lots of antennas and cable, and a few other gadgets, like the garage door opener. Hence, I was real nervous during this last storm. This time I was spared, but as Kirk notes in the following e-mail, Johnson County wasn't as lucky. (When Kirk talks about NE courthouse, he means Fire/EMS dispatch.)
"Last night during the thunderstorm, the NE courthouse got hit by lightening. The radio was reporting that the 911 system was knocked out (it wasï¿½Andy), and calls diverted to Olathe. Also, the dispatch for the NE (sheriff) zone, usually on the JoCo trunked system as group 80, was off the air. Their traffic was being dispatched on NPS channel #1 (866.0125,) and the cars were also being repeated there."
"I've heard this go on for days at a time, so it will be interesting to see how long it takes them to get their system back on the air. The other trunked channels, including the south zone were still on the

trunking system, only the north zone was off."
I used to work at Fire/EMS dispatch, and I know that during a severe storm they usually have more than enough alarms, fires, lightning strikes and storm related activity to keep them busy. A big percentage of their units are on the streets going from call to call. It is a rather hairy scenario. Add to that the destruction of the 9-1-1 system and one or more dispatch channels, and you have a real mess. I tip my hats to all of the dispatchers there for keeping the lid on everything that night.
Thanks, Kirk.
---
15. From Bob:

"The KU PD 800 system on 867.675 was down yesterday afternoon about 5:15 p.m. During the outage the KU units and dispatcher all switched over the Lawrence KHP system on 868.8625. So we know they have that freq. in their radios and that that is their backup system. There are no repeaters on 866.0125 or 866.5125 in the Lawrence area. The nearest are Topeka and KC."
---
16. Kirk inquires about a new talkgroup for the Johnson County KS trunked system. I failed to get back with him, so Kirkï¿½I apologize. Here is his question:

"Does anyone have any updated spreadsheets for the JoCo talkgroups? I've been listening tonight, and heard group 4016, which someone say was "channel B". I've heard 528, which sounded like an additional channel for south dispatch."
---
17. Last, Kirk and I have been tossing around the idea of another get-together. I spoke with our Technical Services Unit Supervisor (Head radio guy,) Dave Dunford, who said he would be glad to get with us and talk about radios. He is an Electrical Engineer, and has worked with/designed many radio systems. He has good general knowledge of anything "radio." My boss, Steve, might be cajoled into attending, too. He has lots of answers as well. If it comes to pass, perhaps we could meet someplace after/before committing pizza atrocities and have a very informal "meeting." I might be able to talk the powers that be to let us use our training room here at Lenexa PD. Kirk and I thought that it might be better that way, rather than having several small isolated groups at different tables in the local Pizza Hut.
Sunday would be a very good day for me, so unless someone has a problem with that, I'll look into reserving a room at the PD or a library for a Sunday in October. Think of topics and questions for Dave, and I'll let him know what they are so he can prepare for it.

Later,

Andy

Yea, we knew that Phil would cause sadness for us all & come back
some day to continue his attacks on this NG. :(

> Mackey and his cohorts like Healey have been playing basically the same game
> for over two years. It is called "kill a news group or two". You should take

NO, actually we have protected this NG from some of the worse evils
around. For example, there was a man who was some kind of self
appointed
scanner expert who claimed to be an "Engineer". (The type of "Engineer"
he
claimed to be changed frequently from "Chemical" to "Telecommunications"
to "Electrical" to "Logistical" to others!) This person often flamed
the
NG under the disguise of giving scanner advice. This problem was in
full
bloom when I arrived on this NG in July 1996. I joined many other
people who
were taking action to end the problems this person was causing on this
NG.
Recently, complaints to the ISP of this person resulted in him loosing
his
internet access. There was never any attempt to "Kill a news group".
The
attempt was to save this NG from the clutches of the evil tactics
he used on this NG. Unfortunately, there were a few individuals who
support the person who caused the problems on this NG, & attempt to make
excuses to justify & rationalize his behavior.

> They would not be harassing you if they

> a problem with anyone they perceive to be an authority on the subject of
> scanners , or even radio in general.

Funny, then why is it that Bob Parnass never receives any of the
problems
that you mention above? Apparently there are serious flaws in your
above theory.

> I don`t see where anythiing Mackey ever posted "terrorized" this news

This only makes sense. What about deaf children? Kids being kids and not paying attention? Kids that have left the bus before the driver could shut the door? The small amount of time spent stopping so the driver can account for all of the kids before turning her lights off will make no difference in the outcome of the emergency call and very well may save the life of a child.

However here in Michigan at least, funeral processions also have the right of way. If there is one time stopping for an emergency vehicle would make no difference its when your already dead! That's a stupid law.

It really shows people who shop at
RS how literally bass-asswards they
and their "CEO" exist upon in their
great oval-toilet in the SKY.

It's really a full bag of puss they
give you each time you go in
ask them a question
and be told "there are no answers"
by their attitude and their begging all the
time for sustenance to afford BUS money home
and return.

(ps: those cretins with half-a-load who call it their
brain which they are sitting on, if you cannot get this
then don't announce it.)

be told that the question you ask is a mis-number. They
have no number like that in their computer. NOR will there
ever be a number like that in their computer.

I walk into a store today. I ask for the "NEW" trunktrackers"
I've been hearing about. Sales demon says: "u got badges?"

reply: "I don't got to show u no stinkin' badges"....i want
to see the new trunktracker scanner in the 200/300 range.

whereupon this woman with obvious need, says: "is that the
number of channels it has or what?"

Boy...did I ask the stupid question of their day. Training
to the fore.

Perplexed by this naivette-like existence I then said:
"you know, money i pay" "money you make off of it"....

"OH" she says. Talks to the guy with Manager on his
corpse-like badge who says: "we don't have any
and i don't think there are any BASE Models.

"OI VEI" I mumble.

All this time the woman is looking at all the scanners for
the word "trunktracker" in Big Letters. No luck.

"sorry, no such scanner".

Well, I knew there were and figured i'd just test the
waters. So, seeing a pile of NEW RS Catalogues I just
huffed her off and grabbed one and walked out.

No one stopped me. No one demanded 3 bucks. No one was
that interested that I left without an answer. Is not
that the theme they go by this year?

No one was home.

Anyway...turning to page 73. 'OH JES".

Why? Because it made sense. There was an answer
in the damn catalogue if I had to create one myself.

What did I find on page 73" you ask. questionable marks

OI VEISM...what a load-off.

There are two base model trunktrackers: one for 300
and one for 219. Add .99.

The PRO 2050 (300) measures 2.5 x 8.25 by almost 8 inches.

This is the 300 channel 50 banks of 30 for conventional
scanning and then trunktracking goodies to follow. Good
size.

"what else did you find on the page" someone is asking me by
telepathy..." "we know who it ain't, class".

NEW PRO 2066 MOBILE-BASED Trunktraker with CB and 800 and
conventional stuff. 300 channels to search conventionally.

Mounts under dask or in many other places in your auto or your
mobile.

IT even comes with a national trunktracking frequency guide.

Did I say "219.99? What a price?

Say...i've got an 895 xlt in my car and does it take
up room and not easy to read and what else can I not
say good about that monster in my car. I only have
so much room in my Jeep.

MObile...what a concept.

Ignore the AGC line. It's not needed and comes into play only on
strong signals which you rarely encounter.

The TV-R7100 will work fine on the R7000 by just leaving the AGC line
floating.

Hugh,

&#65533; Looking for 1 or 2 of the front pulldown extension legs for a
&#65533; PRO-2005 or 2006.

I broke one of mine an the PRO-2042 and called RadioShack for a replacement only to find that in order to get these feet I needed to purchase the entire bottom end of the radio for ~$35 which I immediately forgot about. If you can locate these feet cheaper somewhere else, please let me know.

&#65533; Also need the part number for a PRO-2005 front panel.

Sorry, no help here.

Good luck otherwise!

Charles

One reason that codes are used (especially clearance codes) is that
it is entered into the CAD computer by the dispatcher, and then goes
to tha mainframe (or server, whichever). The information can then be
pulled up later and sorted, searched, etc, by a clearance code (which
is more standard) for statistical purposes.

<bertro@my-dejanews.com> wrote:

>I am looking for a constant volume device or a circuit to build one.

Yes, I'm seeing more demand for this.
In my area, there is considerable variation in the
modulation among land mobile transmitters.

As a historical note, a solution was provided long ago
by Capri Electronics of Canon, GA, an innovative scanner accessory
manufacturer now out of business.

Capri sold a VE-18 "Volume Equalizer" for $49.50. It required
12VDC at 200 ma and an external speaker. It plugged into the
external speaker jack on your radio. Maybe you can find one at
a hamfest.

Part of the VE-18 catalog description follows:

"Stop fiddling with your radio volume control. Let our
Volume Equalizer even out those volume fluctuations for you.
A change of 25 dB at the input results in only a 5 dB
change at the output."

"Also, noise outside the voice band is filtered out by the 4th order
300 to 3000 Hz bandpass filter to make the audio more understandable
and pleasant to listen to. You set the volume with the volume
control on the VE-18. Ideal for scanners an CBs...."

If you want to build a scanner volume compressor,
consider a small audio compression module advertised in
Nuts N Volts magazine. C & S Electronics (not to be confused
with C & S Sales) makes an inexpensive, low level module
and an amplified module.

I tried an early version of the C&S module a couple of years
ago. I inserted it at the wiper of the volume control in an old
BC300 base scanner and measured the performance.
The early C&S module wasn't quite up to the task, but I don't
recall all the details (perhaps their AGC time constant was
unsuitable).

I provided C&S with my findings and they said they were
developing an improved module. Though I haven't tested it,
the newer version may serve well as a scanner

volume compressor.

While at an CAF AirShow, I notice on top of a radio being used by one of the security person's the reading of 150. The radio had a three adjustable position dial which read 150. The radio was possibly a single adjustable freq. and the antenna was approx. twelve inches long and thick. One of the other radio's was a Motorola brand and my impression was a single channel radio.

I had my Opt. Scout within couple feet of these radios, but no luck in picking up the freq., must be the antenna I was using. Any suggetion of the freq. of these radio's.

HELP!!!!
Ok, heres the deal. I have a Pro51 with a datecode of 5A6. I tried the cell mod with the 2,9,MON and then 2,9,L/O and the test frequencies come up. However, channel 23, which should be 888.68mhz, is instead 857.2125mhz. Why isn't the cell freq being displayed? I tried the mod a zillion times and the cell freq won't show!!

Thanks in advance,
Shaun

Body handling: Binary attachment payload not displayed: vcard.vcf

Awesome handheld. Flawless condition. Covers 25 through 1300 MHz
minus cell. Connects to Bill Cheek's CE-232 Interface for
computer-controlled scanning and programming. Triple conversion.
I bought it new to monitor CB, traffic and news helicopters and
various municipalities during my daily commute. No mods done,
covers never removed. Box, manual, antenna, etc. $225 shipped
contiguous 48 states but prefer Dallas area sale.

Am I mistaken, or does the european version only do cell
in 12.5 KHz steps and, if so, isn't that near useless in the
states?

[One or more binary attachments are retained only in the source text.]

> Barry...
Main problem as I see it is that a number of years ago when 9-1-1 was
just coming into it's own, every new system was being touted as state of
the art to the citizenry of each new community it served...in the
emergency communications center in which I worked, our boss was a
retired police colonel and ran the place with an iron fist...He was good
in public relations and pushed the idea into the forefront of public
opinion as being a real safety issue for the city and county as a whole
in our area...he got his point across and the AD CAMPAIGN went into
effect telling every body to call 9-1-1 NO MATTER WHAT THEIR NEED FOR
LAW ENFORCEMENT/FIRE/EMS was and they did. I suspect it occurred in a
variety of large communities the same way and wah---laaaa now we have a
mess of folks calling 9-1-1 thinking it is chicken delight and when the
new AD campaigns tell them only to call when it's a real emergency they
start shying away from using 9-1-1 and calling the old 7 digit non emer-
gency numbers for real emergencies...that is why everyone ought to have
call screeners to take the calls to determine it the call is legit or
should go to a non emergency circuit. People call in thinking a tire
laying in the middle of the road isn't a real emergency....well it can
be given circumstances...let someone come along driving an 18-wheeler

loaded with hazardous materials, strike that tire and cause a wreck like who laid the chunk with hazmat spilled on everone and spread out for 2 city blocks and perhaps causing an explosion and fire or two, causing a major callup of police,fire, ems, hazmat team and any other major members of the goat roping team you can think to wake up at 2:00 a.m. whom would be highly offended if they didn't get a notification.

Cross-posted to: rec.radio.scanner,sci.astro.amateur

On November 17 and/or 18th, before dawn in the wee hours of the morning, the leonid meteor shower is expected to hit big time. And thus opportunity to do some long distance "DX" communications on VHF and UHF frequencies. These radio waves can bounce off of the ionized meteor trails in the sky. Could be thousands of meteors per hour at the peak. With this many meteors, one might be able to carry on long QSO's (radio conversations). One could monitor FM broadcast band stations of distant cities to listen for "openings". Or NOAA weather freqs.

>And we can still do this even if clouds cover the sky.

Message-ID: <3618af4e.23377356@news.supernews.com>
Source record: 142552

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 obo and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.

Hmmmm.

Well.

Put your fingers to work.

Go to http://www.altavista.com
search for "Canadian Law"

all sorts of links are found....over 9000
hits.

you could also search for:

"search engines" and narrow it down
a bit...by country...

Yahoo does that: by country...

plus all those FTW sites and TELNET sites
to go to up in the Cold North...University
Sites...

plethora of info. I have a Yellow Pages
book here somewhere...try that for Canada.

search for "privacy Law"
etc.

get creative. don't contemplate
about how the stink of Mackeral would
handle this try. it would just wooosh
right past his insipidness.

bill conduit
etc.

Well, comparing a 2026 to a 2006 is like comparing a bicycle to a ferrari.
How good is it ? OK, if it is cell -capable (not all of them were). Still
OK, even if not cell-capable, if all you want is an inexpensive scanner for
the morning commute. modifiability ? Cell and not much else, on earlier
models. Not worth much more than 100 if in top shape.
It ain`t no 2006, that is for damn sure !

Yup, its the Euro version. Their VHF low band is different than ours. There was a post like this a long time ago, and if I remember correctly, they guys best bet was to buy a US version and sell the old one.

I've been doing some more research, and found the 2, 9, L/O code to give the cell test frequency, however, it leaves out the cell one. According to my date code, 5A6 it should qualify as a cell capable unit for the test frequency mode.
What am I doing wrong?

Here in this corner of the Great Wet North, they do.. but not 9-1-1. (?) And not only does Fire not have 9-1-1 on the trucks, might I add, but up until last month, they didn't have any great deal of identification at all--just a big Maltese cross on the door and a 3" dia. sticker in the lower left corner of the windshield that said what station the truck was from. The newest trucks have enough logos you think there's a new NASCAR series coming into town.

MY department has lots of stickers and letters and gold leaf and Reflexite 9-1-1 decals all over the place. :)

It will hear the analog bits. For the digital side, all you'll hear is noise that sounds like a hundred buses idling (well.. something like that).

Personal observations (like the above WASN'T :)) : If your system has more than 50 talkgroups that you WANT to listen to (the one I want to hear has about 64), you're better off to forget using the scan lists and try using search mode instead. HOWEVER, conversely, if your system has more than 100 digital talkgroups (or if your system is a SmartZone setup and has more than 100/n talkgroups where n is the number of Zones in the system), using search mode could be annoyingly noisy for you.

If both conditions are met--that there are more than enough talkgroups to use scan mode, and more than enough digital groups to use search mode.. pick one and live with it. That's what I ended up doing.. you get screwed either way.

Hopefully the next incarnation of the TT will have a bit more leeway in terms of lockout lists (ie. more than 100) or scan lists (more than 50).

"kills" was simply a figure of speach. I know what an attenuator does. My point was that a bandpass filter would be better than a simple attenuator if someone wants to recieve a particular frequency without interference from other frequencies.

I obtained an old Bearcat 250 made by Electra at a flea market today. It has 50 channels and some other nice features according to the box. Does anyone have any info. about this scanner? The display doesn't work, but will be fixed soon. Thanks!

303. BC200xlt: Need info.

Newsgroup: rec.radio.scanner
Date: 1998-10-04 00:00:00 UTC
From: S <Nospam@hotmail.com>
Message-ID: <3617E784.4695B489@hotmail.com>
Source record: 142334
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I just purchased a Uniden Bearcat 200xlt scanner at an auction yesterday. I managed to find the exact AC adapter, that I needed to charge and run it, sitting on my parts shelf. I also figured out how to do a limit search, get all the data banks programmed in a useful order, and deleted one resistor that was interfering with my enjoyment of the hobby. Unfortunately, it didn't come with a manual so I have a few questions I'd like to ask.

1)How long should I leave the drained NiCad battery hooked up to the charging adapter?
2)How long should a good NiCad battery pack last on a full charge?
3)Can I set any channel to be a priority channel?
4)If yes to the previous question, how many channels can I give priority status?
5)How can I tell which channel has priority status?

When I hit the priority button, I see the 'PRI' sign on the left side of the display but the scanner never jumps to any channels, there is no indication of which channel/channels might be set up as priority channels. I have scrolled through all of the channels and none of them show anything on the display to indicate a priority status. If there is a channel set as priority, no one is transmitting on it.

I have noticed that my 200xlt is less sensitive than my pro-46. The pro-46 catches more transmission while in search mode than the 200xlt. I switched antennae and locations but the results were consistent. Can anyone who has played with both models verify my results?

I will credit the xlt with being faster at scanning through the channels than the pro. I just wish I could use regular AA batteries without having to buy a rat pack or similar device. I will probably end up building my own battery pack adapter if the stock NiCad pack is shot. I've read a few web pages that tell the story of the faulty low battery indicator circuitry but I am not sure if mine suffers from that problem. I have to give the battery a full charge first and if it dies quicker than it should, I'll have to find out if battery pack is worn out or if I've got the bad circuitry. Any advice regarding the battery problem would be greatly appreciated.

Overall I am happy with my new toy. With tax and commission to the auction house, my cost was $125 Canadian (~$80 American), which, from what I've read and heard, is a good price.

Sort of like "we must burn this village to protect it" or during WWII,
running to the Communists to protect you from the Nazis. That sort of
"logic" is being employed by the "protector" of the newsgroup.

Poor communication on my part. What I should have said is that
"the PRO-26 CAN be modified to connect to Bill Cheek's CE-232..."
Sorry for the confusion.

I called the store in the phone
book titled: Radio Shack. Open on
Sunday's.

i asked: "I would like to know if you
are selling the PRO 2066"...the new Mobile
TT.

he comes back with : "what's a TT?"

"never mind"....I say.

"do you have in stock the PRO 2066?"

he comes back with: "do you have the stocking number?"

I utterly afghast shock ensuing disdain look say:
"what?"

he comes back with "i cannot tell you unless I have
the stocking number"...

I say: "u just lost yourself a commission and a
friend"....

hanging up.

he then hits "redial" on his phone and calls me
back and my phone capture a number machine shows
it. I say nothing. he says nothing.

Nothing will happen at that store with my money.

Looking for some info on the TT Mobile - RS-2066 I called stopped by the local Rat Shack store. Well, the clueless *didn't have answers* after all.

So I pulled the catalog out when I got home to go to there web site -- guess what, no web address. Now, I am not exactly an expert at these things but I imagine that people who shop Radio Shack are generally pretty Internet active. I can only guess they were too busy collecting names and zip codes at the register.

Well, all that to say this--- has anyone heard anything new on 2066 availability?

Bill lost his web site & internet account on SAN.RR.COM due to
internet abuse, primarily on this newsgroup. He was also kicked
off of the Scan-L mailing list due to abuse on that mail server.

Bill has re-surfaced with his previous account "bcheek@cts.com",
but chooses not to be active on this newsgroup.

O K A Y - Here Ya Go

A N O T H E R R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX. We do not believe this to be a coincidence ....

>appointed

Why, Mackalooney ? did somebody appoint you moderator of this group ? Are you somehow trying to paint yourself as the "saviour" and "protector" of this group. Get real. This group is peopled by adults, who can think for themselves. (And do it a hell of a lot better than you).
NObody needs you to "censor" the group. By the way, it does no good to quote me out of context. People can read the original post and see what a liar you are. As I said, the "black is white" comment was aimed at YOU, not Kendricks. Kendricks data is accurate.

>The
>attempt was to save this NG from the clutches of the evil tactics
>he used on this NG.

Ah! what "evil tactics" were those ? Posting 1500 on - topic messages while you posted only about 30 ? (I am being generous here). Bill Cheek was (and is) the richest source of scanner info on this planet. he WORKS at it. He has worked hard for the benefit of all of us. Much of his hard work was published right here, for FREE. He has written several respected tomes on the subject. What have YOU done to further this group , or the cause ? Deprived it of a priceless source of information ? YOU have to mis-interpret my remarks, quote me out of context. and delude yourself that you have any support from me!
>
>
>
>Funny, then why is it that Bob Parnass never receives any of the

Bob Parnass is a hell of a lot more valuable to this group than YOU are ! I don`t wonder he doesn`t waste his valuable time on a looney like you ! He is far too busy "getting on with the job" to waste time on you ! Why don`t you go over to deja news and check HIS posting record ?

>Your insight is excellent!

I know my insight is execellent. My insight into your behavior has been shaped by over two years of observation. Your dad didn`t have to go to MacDonald`s to get a 40-year old piece of meat between two 10 - year old

buns, and you have been trying to make the world pay for it ever since. But you don`t have the nerve to confront him about it face to face, huh ? You are gonna punish him "by proxy". You like the anonymous nature of the news groups and the CB to "confront your dad - proxy". Well, Bill is not your Father. If he were, then you would have been considerably higher on the evolutionary ladder. Genes will tell, and they have been "telling" on you for over two years......

A lot has to do with the antenna size and the fact that farther up the band the signals are less affected by conventional wood structure (to a certain degree) as opposed to industrial construction of steel and concrete. Most home owners will notice the extended range. On the other hand taking a conventional cordless phone and placing the base unit on the second floor gives me about 250 feet of freedom which is all I really want. Maybe when the price comes down I'll go for that "quarter mile" range so I can carry my phone around the block and "reach out and touch someone".....(;>)....

Fred -

Please read my post carefully. My question was, basically, "how can 900 mhz spread spectrum have twice the range of 900 mhz spread spectrum [!?!?!]" -- 'cause that's what their web page says.

The handset to base transmits 900 mhz spread spectrum just like my several year old uniden. Only the base to handset works at 2.4 ghz. -- yes?

Is the 2X range increase [as compared to 800 mhz spread spectrum, which is what they claim] only one way? What are they trying to say?

FWIW, I was lucky enough to glom on to several consoles from our county FD/EMS
dispatch center when they upgraded their equipment. (It helps to have worked
there once, too!) Anyway, they were old Motorola consoles, made about the same
time that radio was invented. (Mid 1970s actually.) Inside, they have a number
of circuit board cards. One is a compressor/amplifier, another is an audio
amplifier...and they are powered by 12 volts. The compressor/amp also has a
flasher that was used to blink the bulb for the appropriate frequency that was
being received.

Each console has a bunch of these pairs of cards. The compressor/amp does exactly
what you are talking about. It keeps the audio at a constant volume. A little
ingenuity, and having a suburban with lots of room, (the cards are about the size
of a small textbook) had allowed me to use one set-up in the mobile installation
for the TrunkTracker, which has notoriously low volume.

Not everyone will be lucky enough to scam a dispatch console from some department,
but it might give people the idea to keep there eyes out for old commercial equipment
that may have such items hidden inside.

Andy

PS No...I won't sell any of them. They are all earmarked for projects here at home.
Sorry.

348. Re: Misuse of 911. Is 311 the answer?

Newsgroup: rec.radio.scanner
Date: 1998-10-04 00:00:00 UTC
From: Andy B <andyb@qni.com>
Message-ID: <3617928B.3D0E@qni.com>
Source record: 142389
Cross-posted to: alt.security.neighborhood,alt.law-enforcement,alt.thebird.copwatch,alt.radio.scanner,rec.radio.scanner,alt.emergency.services.dispatcher

FWIW, I am a dispatcher, and I have thought about the 3-1-1 idea. I seems to me that if I am getting 30 9-1-1 calls per hour (arbitrarily picked number) on 9-1-1, it takes me X amount of time to handle them, regardless of if they are true emergencies or not. If we got 3-1-1 also, I would still get the 30 calls, I would still have to handle each one of them, and it would still take me X amount of time to do so. The only difference would be that I would have to punch the button that says "3-1-1" on some calls when it rings instead of the one that says "9-1-1."

You might say that I could let the 3-1-1 line ring if 9-1-1 was busy, but in our department we treat any call that comes in on our 7-digit number the same as we do those that come in on 9-1-1. We assume that who ever is calling needs some assistance. If we had 3-1-1 we could also assume that someone needed the police or fire/EMS, and would be just as eager to answer it as we would 9-1-1. This discussion originated by saying that people don't know what a true emergency is and they often call 9-1-1 when they don't have an emergency. The opposite is also true. I have taken calls on our admin line (the one where you must wait for the automated phone attendant to tell you what button to push for this or that) for people wanting to report robberies or non-breathers! They say they didn't want to bother the 9-1-1 people. They don't understand the 9-1-1 (in my area, at least) goes to the same place. Dial 9-1-1 and I answer...dial 555-1234 and I answer...dial the admin line and I answer.

That fact removes the option for me to prioritize which line I should answer first.
Regardless of the line that is ringing, I answer it as soon as I can. Once I discover
it is non-emergency I can put them on ignore and handle the next phone line.

I wonder what the dollar amount would be to implement a 3-1-1 system? Would
it be enough to hire and keep several more dispatchers/call takers to answer the
existing phones and call load? Or to add more 9-1-1 lines AND more call takers?

I dunno...just my thoughts on the subject.

Default is 12.5kHz yes but you can always manually override and select 5kHz if you wanted though.

!!!

Probably just needs a new keypad. Quite easy to fit yourself (although a
little soldering required to make life easy) and you should be able to
get one from Tandy National Parts without much trouble or cost.

>They were kind enough to offer me a new 300 channel Trunk Tracker

225-400MHz is Military Airband. From memory this part of the spectrum
is now "missing" from the current RS handhelds since they removed the
PRO-26 and PRO-60 from their product line in the USA.

Hope that helps.

Hi Andy,

>Since the reviews I read are based on the Japanese versions, can anyone
>report on the frequency spectrum and blocked ranges of the USA model?

All AR8200's offer the same coverage, 500kHz - 2040MHz.

The AR8200B is the model distributed by AOR (USA) and is the same bar the frequencies used by analogue cellular in the USA being "blocked".

"Automode Bandplans" may differ to suit the various differences found in mode/step sizes associated with frequencies but this can be amended with software.

Hope that helps.
Cheers,
JC

> you somehow trying to paint yourself as the "saviour" and "protector" of
> this group.

No, I (& the others) simply acted as responsible members of the
newsgroup & did what most normal intelligent people would do.
For example, if you neighbor saw someone break into your house
& start taking things from your home would you want them to do nothing
or would you want them to call the police & report the activity they
saw?
Of course, you would want them to call the police & report the activity
they saw!!! Same thing here, we saw him stealing the samity of this
NG & causing problems, so he was reported to hism ISP who then reviewed
the situation & took action.

> Ah! what "evil tactics" were those ?

Flaming & causing problems on this NG & generally going AGAINST the
good of the order for this NG!

> Bob Parnass is a hell of a lot more valuable to this group than YOU are ! I
> don`t wonder he doesn`t waste his valuable time on a looney like you ! He is

> go over to deja news and check HIS posting record ?

I know Mr. Parnass's record. He is knowledgable & a great resource of
info to this NG as you CLAIM Bill is. Yet, he does not experience any
of the
problems that Bill has, & is not involved in all the troubles and flames
that Bill participates in.

Perhaps YOU should review the posts on Dejanews?

> >Your insight is excellent!
>

Who are "we" loony boy? All I see *you* here. Where are they? Check in time. (Not counting your phoney forged virtual support group, of course.)

> several problems with inaccurate data being posted from that person.
> (Like the suggestion of using metallic tuning tools on RF
> oscillators!!!)

Jeez. You've been whining about that "...metallic tuning tool on a RF oscillator..." crap for over a year. Is that the only technical reference you know? What is it? Some sort of demented mantra? Dont'ja see it?: That obscure "RF oscillator/metallic tuning tool" bit
is a physical manifestation of your disorder.

I've seen it before. We had this loony-tune running around my old neighborhood. He was on disability and as an adult, he was still under the guardianship of his aging parents. But they couldn't do nothin' about him. Anyhow, this loony tune was real particular about how people set their garbage out on the curb. He used to rise early on Tuesdays and Fridays and patrol the area looking for garbage that wasn't arranged to his liking. People have had to call the police when they found him on their front lawn shrieking about some obscure county refuse regulation. He'd go off: Ringin' the doorbell and yelling and shrieking. Naturally, people usually wouldn't open the door, they'd just tell him to go away or they'd call the Police. So he'd just move his act to the front lawn up the volume a bit; he'd really get the spittle flying. Then the police would come and take him away. He was a complete wacko.

That's what *you* do Mackey. But your demented mantra is that "non-metallic tool for adjusting RF oscillators..." bit. Dont'ja see it? You're positively loony! You repetitively go off the deep-end with some obscure technical reference that no-one gives a sh*t about. Face it: you're a lunatic!

Of course, dear readers: The Portland Psycho won't acknowledge that Portland is just shy of the Oregon state line with Washington State. I've posted the Street Atlas map before which computes that Clark College WA is *16 point 7* miles from Beaverton OR. But lying loony boy doesn't deal with facts. (I gave him the thirty (30) mile figure to see how far the lying loon would try to stretch it. He's trying to put as much distance between him and Clark College as his lying lips will allow.)

> > Can't post like you used to? Had a discussion or two with your ISP?

>
> There have not been any rproblems with Bob either! Right???

There haven't been any problems with the Easter Bunny either, but that's hardly germane to the discussion at hand. Why are you dragging Bob into this? Are you alleging that BOB PARNASS is part of the "we" you've been going on about? Is BOB PARNASS your team-mate? I've been asking you who this "we" stuff is you keep going on about. The only name you keep offering is BOB PARNASS.

So I really dunno John; just tell me: Who is "we"?

You friggin' loon.

Oh yes, forgot about that. I wonder which would be more inefficient
and futile, scanning the forboden in 5 KHz steps or using that
silly virtual downconversion (VD) mod someone developed for the
insulted PRO-26. That said, Jonathon, please acknowledge that I'm
on your list for potential PRO-2042 boards. :)
PRO-26 $225 see previous post.

The AR8000 is probably the most "supported" scanner when it comes to
software packages - there is a wide choice of commercial and shareware
packages available to choose from.

A selection would include:

AOR PC-Manager For Windows
http://www.demon.co.uk/aor

ScanStar Plus for Windows by Signal Intelligence
http://www.scanstar.com

ScanCat Gold for Windows by Computer Aided Technologies
http://www.scancat.com

JavScan-8000
http://www.users.globalnet.co.uk/~pmoran/index.htm

ARC for Windows

Yes, many attenuators are built from resistor networks. The "ARRL Handbook" (69th Edition 1992, page 25-39) has plans for building them with a range from 1 dB to 60 dB using either a PI-Network or T-Network topology.

Two 50 dB attenuators back to back would provide 100 dB attenuation and require 6 resistors. They are easy to make and at 46 MHz or so should present no real technical hurdle.

If the cover never has been removed, nor any mods done...how is it
able to connect to the CE-232 interface for computer-controlled
scanning and programming? Yes, I don't feel that it is impossible to
make programming available from the computer interface, but not the
scanning control. It would be very tedious and would definately
require extensive modifications.

> is a couple of bands .... that move up the screen slowly.

A band slowly moving up the screen would tend to indicate another TV
signal, slightly out of sync with the one you're receiving (or something
synchronized to the 60-cycle power line). First thing to consider is a
leaky cable TV system, or a bad cable connection in a nearby house. Cable
uses the same frequencies as channels 2-13, but shifts in other bands. In
particular, UHF Ch 31 (572-578 MHz) corresponds approximately to cable Ch 82.
If your local system stops before that point it might explain why there's no
problem on UHF.
Try looking at inactive VHF channels and see if there are faint signals
corresponding to their cable assignments.

I like a fire vehicle with identity! We had an artist at one of the
stations I was at and he airbrushed "Taz" on to the heavy rescue with
cut Reflexite trim on the turnout coat and helmet. It was SHARP!

Fortunately, no one put Skoal, pPg and Penzoil stickers on it.

I wanted to put "Better late than never" on the front, but the idea
got knocked down.

>> In fact, I hear a lot
>> of Detroit cruisers are getting stolen because some of the dumber

>!!! Surely, you're NOT serious.. are you? :)

Never discount how low or dis-educated humanity can get, that's part
of our core business.

P.S., did you hear the one about the chronic 9-1-1 caller who became a
handyman? He went to the rich neighborhood and asked a local if he
could do something to fix up the place.

A "clean cut" well-to-do couple said, "Why, yes, there is something
you could do!" and asked the man to paint the porch- the materials
were in the garage. The wife comments to her husband, "I hope there's
enough paint; the porch goes all the way around the house." He said,
"We'll see, at least he could get the first coat down."

20 minutes later, the chronic 9-1-1 caller cum handyman returned and
said, "Boss, I had lots of paint left over, so I gave it TWO coats!
You'll love it- it's a nice coat shade of yellow! By the way, boss,
that's not a Porch, it's a BMW!"

This is true, but they are very rare in the Shack stores any longer.
If you know of a RS store that has them in stock, it is a great buy
for $99.97.

I was lucky enough to fine one in August and paid $99.97, then
subsequently sold it here for $100.00 as I was noty looking to make a
profit from fellow hobbyists.

Hello,

Over here in Australia there seems to be a growing use of the MPT1327/1343 standard. I've seen software available for the pc that allows tracking of the Motorola SmartNet/Zone systems however is there similar software available for the MPT systems? Either using a hamcome interface or soundcard?

The Panasonic web site says that they are designed to be not effected by
microwave ovens. And yes, the ovens are at 2.5 Ghz, very close to the 2.4
Ghz of the phones base unit.

I seem to remember a generic mod from Bill Cheek that kept light button operating normally but would also light it up when radio broke squelch - I think it was for various radios. Go to
<ourworld.compuserve.com/homepages/bcheek>
and see if it's good for your rig.

407. Re: Diamond D130 discone antenna

Newsgroup: rec.radio.scanner
Date: 1998-10-04 00:00:00 UTC
From: Dennis <djmr26@bestweb.net>
Message-ID: <01bdef4e$af9f9280$82685ed1@oemcomputer>
Source record: 142461
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a discone that covers "50mhz up to..." - it has the ring of radials with matching ring of ground radials below. Other antennas I've seen had a vertical component atop it to bring in vhf-lo. I tried to find something on the D130; couldn't find anything to look at and see if it has a v-lo whip on top. If it does, then you've probably got a bad connection where it links to the rest of the antenna. If not, then you'd have to add one - I took one of those fiberglass whips for mounting a flag on a bike, wrapped it with the proper length of wire top to bottom (I don't recall the length or formula - someone help me out here) and wrapped that with tape, leaving a tail of the wire hanging to connect to the + side of the antenna (the shorter radials sticking straight out). It's picking up skip all over the midwest from NYS for 2 years now. Basically, if you can connect SOMETHING of the right length on top and connect it to the antenna, you'll get the band.

409. need help with interference on OTA tv antenna

Newsgroup: rec.radio.scanner
Date: 1998-10-04 00:00:00 UTC
From: got@srv.net
Message-ID: <36170a33.2031684@news.srv.net>
Source record: 142463

I am not sure that this is the best place to ask but I figure that someone reading this group will be able to help. I recently installed a tv antenna outside and get interference on all VHF channels (3, 6, 8, 10 in my area) but not UHF ch 31. The interference is a couple of bands of crawling dots of different colors (mostly white and about twenty or thirty per line) that move up the screen slowly. Interference is continuous all day and usually goes turns sporadic about 10:30 pm or so.

My best guess is intereference from cellular due to the times in which it happens but I have been unable to find any filters other than an FM trap and a ham radio/cb filter. Anyone have any suggestions?

411. Re: Pro-34 light mod ?

Newsgroup: rec.radio.scanner
Date: 1998-10-04 00:00:00 UTC
From: Joe Sullivan <iam1953@mb.sympatico.ca>
Message-ID: <3617121F.84D6E130@mb.sympatico.ca>
Source record: 142465

You need to look at the schematic of the radio and find the point that gets grounded when the light button is press. Add a wire to that point and bring it to the power jacks ground point. When you plug in the external power source it turns on the light. I have done this mod to the Pro 34,37,43. If you want it on with no external power source then you may have to add a switch, some have used the key lock switch but every RS scanner I have owned that switch has failed. On the Pro 37 the ground point for the light is the base of Q14, the Pro 34 ground point is the base of Q21. If you test with a voltmeter you can find the ground point of the power jack.

Hope this helps, Jose from down the way (Canada).

> mod with the 2,9,MON and then 2,9,L/O and the test frequencies come up.
> However, channel 23, which should be 888.68mhz, is instead 857.2125mhz. Why
Uniden got wise to the fact that people were using their test
program sequence to access the cellular range. So rather than get in
trouble, the newer ones were reprogrammed to omit the one test frequency
in the cellular range, rendering the test useless for the purpose of
opening up cellular on all but the very early models.

420. Radio Shack Pro-43 scanning frequencies question.

Newsgroup: rec.radio.scanner
Date: 1998-10-04 00:00:00 UTC
From: kb5eau@grnco.net
Message-ID: <36175A77.4081@grnco.net>
Source record: 142474

My Pro-43 Radio Shack Scanner lost the #6 function on the keypad. It was under warrantee .
The repair was not made because it was economically unfeasible to repair.
They were kind enough to offer me a new 300 channel Trunk Tracker portable in exchange. I looked at the frequencies coverage and I would lose the 200-400 section.

My question is what is on this block that I will lose and why the deletion.

AND

Doesnï¿½t the ham band still occupy the 220 section?

I read that the Pro-43 is one of the most easily modified scanners that have been built.

Might they be trying to get these out of circulation.

The lady at Radio Shack said when asked what frequencies would be lost in the trade and she replied, "you will not lose any frequencies, you will gain frequencies".

Any one who relies on Radio Shack employees for information on their products might as well ask a light pole, at least there would be less misinformation.

I read that the Pro-43 is one of the most easily modified scanners that have been built.

Any thoughts on this subject?

Dan L. Watson, KB5EAU

Just got one yesterday. My observations;

1 This is an analog phone. Can be monitored on a scanner.

2 Range sucks. One block away I lost signal. (small town on a
main street.) At 1/2 block noisey (static).

3 Panasonics meaning of spread spectrum is transmitting on one
frequency and receiving on another. Listening on a scanner
a 5 minute conversation stayed on the same channel.

4 Overpriced for its dismal performance. Junk in my opinion.
Going back for a refund Monday.

WRONG! That will induce, at very least, stray capacitance. PLUS,
grounding self with a wrist strap is a technique used to protect
CMOS devices. Doing so around RF can actually CAUSE the person
a severe shock! (besides altering the resonance of the RF circuit)

> Are you honestly surprised that your little plan blew up

I had no plan.

> Funny how someone who has never been there knows EXACTLY where it is.

I have never been to Harvard or UCLA or U of Minnesota but I know
EXACTLY where those schools are also. Why would it surprise you that
I would know where Clark College is??

> Again, YOU haven't caused any problems with him because he hasn't called you the

Newsgroups: rec.radio.scanner,alt.radio.scanner
Subject: Baseband Audio Pins (Discriminator Chips)
Date: Wed, 31 Jan 1996 20:18:21 GMT
Organization: COMMtronics Engineering

This file is for the benefit of all.

(c) 1995 <All Rights Reserved> Bill Cheek-COMMtronics Engineering

This file is for personal use only and may NOT be placed on a
CD-ROM nor any other media that conveys, stores, or transports
for any monetary cost to the end user, without expressed permission
of the author. This file can only be given away, absolutely free of
charge.

-Bill Cheek-

There is a growing interest in tapping the baseband audio out of
various scanners for decoding of a variety of esoteric signals,
including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such
signals cannot be take from TAPE REC jacks, headphone jacks, and
EXT SPEAKER jacks because of the voice-band filtering that is done
between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. The
below Table shows a list of scanners, the discriminator chip(s)
used in the scanner, circuit symbols of those chips, and three
pins of general interest on the chips: RF-Input, Scan Control,
and, of course, the baseband audio pin.

Even though your scanner may not be listed, if you can find its
discriminator chip, it will be listed with one or more scanners
below, the pins of which will be the same for your unlisted scanner!
Corrections and additions to this list are requested. See my email
and other addresses at the end of this file.

It think it was Sarin nerve gas. I heard a call Saturday advising to
treat it with atropene. It was on a San Mateo Co. fire frequency.

O K A Y - Here Ya Go Once Again:

A N O T H E R R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX. We do not believe this to be a coincidence ....

Pro 26 handheld scanner by Radio Shack in wonderful condition. Used very little. PROBLEM FREE. To many features to list them all but here are the important ones: Continuous coverage from 25Mhz to 1.3Ghz(excluding cellular). Recieves FM and television broadcasts(great for football and talk shows). Has 200 programamble channels,Hyperscan,ten channel storage banks,Limit search,Direct search,Hypersearch,Weather Band Key, Memory Backup,Low Battery Indicator and much more! Original price was $399.00. Comes with 50 page owners manual. Have fun with this one. I'm looking for $260.00 for this one. You can modify this for Cell Phones. You can see a picture on my website as well as other radio goodies I have forsale at:
http://homepages.infoseek.com/~radionuts Thanks George

Got a Bearcat 310 scanner at a hamfest a while back, and it's not in that great of shape... Looks like someone spilled glue all over the front, meaning the labels are impossible to read and scraping ooff the glue takes all the markings with it. So, if someone could tell me what the buttons do I would greatly appreciate it... Also been having trouble finding any other info on this scanner, so if anyone knows the basic specs on this unit... TIA

Source record: 142239

Hello. I'm interested in getting a BC9000XLT base scanner. All I require is that the scanner works 100% and is at least a 7/10 cosmetically, and that it comes with a manual and a power cord. I would prefer to trade for the scanner, but will consider a trade/money agreement. Here is what I have for trade:

-RS 4 Channel Microphone Mixer
-RS Stereo Pre-Amp
-RS PRO-43 Handheld Scanner
-RS Powerhorn 5w Directional External Speaker
-RS Handheld 1-1300 MHz Frequency Counter
-Panasonic BC-4C AA/D Battery Charger

I can provide conditions, and what comes with each item on request. Please let me
know if you interested in trading.

spelling is not an issue...the fingers
don't always catch up with the thoughts...

as for proper English: what's that?

corpse-like badge...u know, the
blood on the chest splurting out
as the body ceases to "thump-thump'

on a NG the theme is predominant and
if one misses with an a or an e on
a word like "make" or meke" or
dask or desk, the majority
of viewers understand that one whose
fingers cannot keep up with thoughts
they do it also...

this is not a paid process...no one
is paying. if so, thenfine. I'll
go back and "edit"....

no, i'll not go to that store. with
those people who don't know their
business. I'll call a store, which
i have already done, ask for the pro
2066 and if i get a "yes, we have the
unit here and would be happy for you
to come buy one...we givea free
catalogue for you to view".

it will never happen.

but it might!

Sure, there is EDACS trunktracking available......it involves a computer
based application and two scanner setup. One scanner is used to monitor the
EDACS control channel, and another scanner is used to "be tuned." I use
this to monitor the City of Irving TX, City of Richardson TX, and the DFW
Airport dept of public safety.

It requires descriminator output from the control channel monitoring
scanner, a standard "hamcom" interface to the computer, the etrunk.exe
application, and a computer controlled scanner. It sounds complicated (and
it is..), but it works.......

See http://web2.airmail.net/lblant1/dfw/digital.htm for schematics,
downloads, and instructions on how to get started!

You need to use Etrunk, which is a software program to control a scanner to
follow EDACS systems.

Hello, all...

I wondering if anybody had an up-to-date list of Public Safety frequencies for Summit County, Ohio. I have leafed through several resources on the web, only to find them cluttered with old information and long-unused frequencies.

I am looking for a current channelization list.

Thanks in advance,

Sean

Not so fast John. Conduit's got one up on you with his "poetic babble"... it may not always make a lot of sense but it usually rhymes. Compare that to your dreck that never makes sense and never rhymes. Hmmm... Bad form, John.

A note: Radio Shack has a WWW page or many

http://www.radioshack.com

A further note: the PRO 2066 TrunkTracker/CB/Conventional mode MOBILE scanner...

Call 1-800-the-Shack.

Answers forth with.

They are at the Big Warehouse. They are being quality-controlled and checked over even.

New Concept, no.

The new Moble Mounting Scanner, the PRO 2066 will be shipping soon...as soon as they ship it it will be known, but you have to call them up to find out when.

"when?" I asked.

Lady says: you will have to talk to the Retail Stores in your area. We have no information on who will get the item you want first?" or last.

So, I asked her if I could order one over the Phone. She says "YES, but not until we have them for sale".

I asked her: "what about a "advanced" order you can take and then fill it when available."

she says: you will have to call tomorrow. I'm just about to get off work. parenthesis and end parenthesis.

will this story ever end.
question mark.

will i get a new PRO 2066 faster by ordering ahead of time or just wait for GODOT?

What a paradox.

that's 1800TheShack.

for answers that get you "more wait"

what a concept.

He probably was serious. I am not very impressed with most of the
"answer" people that work at radio shack.

I called a few the other day and asked if they had any pro-64 scanners left and most of them drew a blank. I also called a radio shack near me the other day and asked what scanners they had that were on sale. This guy told me the pro-91 was on sale for $219. It was actually the pro-91 that was on sale for that price - if I had known that then I would have rushed out and gotten one (I have since). He also told me another one was on sale for such and such a price. The "sale" price was more than this scanner listed for in the catalog! I have little faith in most of the radioshack "answer" people.
What makes it even more pathetic is that the slogan "You got questions? We got answers." leaves Radio shack even more open to critisism. The real slogan should be "You got questions?!.....Uh...."

I don't know how this can be true! I've been looking at the 2004 and
2005 at Oakland Park Blvd and 441 for almost two months now when just
the other day I decided to see if they would take $200 for both and
they bit! I wasn't going to announce it in the group because I was
going to sell one of them to get a free scanner and make a few bucks
but I love them both so much I'm keeping them both!.. Anyway, there
are SO SO SO many pawnshops around that just when you think you've
seen them all, over your shoulder you see two more!!
A good tip, If you are in the area of Sunrise and 441 go into that one
in the middle of the construction on the NE corner..there are about 75
scanners there and about 35 two-way radios!

I picked mine up for $12.97 at one of my local shack stores a few months ago, and its a great little scanner. I use it to monitor the marine freq's I doubt the canada version is any different then the USA one. They were in the 1996 catalog someone once mentioned in the group. It could use a few more channels but other then that...

I regularly hook up a scanner tuned to a wireless mic to a cam corder. Only problem I've had is over driving the cam corder with the audio from the external speaker jack. A better choice would be the low level tape out or aux jack on some scanners. You could also use an attenuating patch cord. I like to use an item radio shack has. It's an inline volume control for headphones. I connect the inline volume control between the scanner earphone jack and the cam corder mic input and monitor the cam corder with headphones. Adjust the inline volume control for proper audio.

489. Seattle area mall security freqs?

Newsgroup: rec.radio.scanner
Date: 1998-10-05 00:00:00 UTC
From: Metacom1 <metacom1@diespammerdieearthlink.net>
Message-ID: <36195262.161E@earthlink.net>
Source record: 142269
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I really like to listen to mall security - hear them about to nab shoplifters and whatever else. Beyond police call has some but they are not used much and don't sound like security to me - probably maintainence.I am wondering if anyone in the area south of Seattle has mall security frequencies for the following malls-
*Supermall of the Great Northwest (Auburn) A mere mile away.
*Sea Tac Mall - (Federal Way) Just up the hill.
*South Center Mall - (Tukwila)
*Tacoma Mall
*Westlake Center (Seattle)
Does anyone know (if not the actuall frequencies) where I can find out myself or what freq. ranges store/mall security usually operates in?
Thanks!

OK, but hold on a minute bucko. He wouldn't have been flaming you unless you deserved to be flamed. And before you comment towards that end, remember that you yourself have said that your actions are influenced by others, therefore you are not responsible.

Secondly, sure one could go get the super expensive porcelain diddle sticks to which you refer, but if one is smart enough to properly ground themselves with a static strap then metal works just fine - just thought I'd share that since you *obviously* didn't know that.

> > Evil tactics? Clutches? What are you talking about?!?!?
>
> You know good & well we have been talking about Bill.

Ah yes. Bill. What is your obsession going to focus on now that he has left? You thought once he was gone, all would turn and kiss your feet for doing them such a great service, didn't you? Are you honestly surprised that your little plan blew up in your face?

> > You mean like your

Interesting the spin Panasonic marketing puts on this.....

They could make the claim that the old 1.7 MHz/49 MHz phones are better
than the 46/49 phones because they use different bands and "are less likely
to interfere with each other."

It isn't the duplexer that causes echo in these phones anyway. It's the 2-4
wire hybrid which is required regardless of which RF band the phone uses.

I agree with Paul...We'll see when someone actually tests one of these...

Man! NYC! Must be scannist nirvana.
My first intro to the hobby took place on a B/W portable TV's
upper uhf band. I was in Queens in a (top) 7th floor, SE corner
apartment in the late 80s. I guess it never occurred to me buy
a scanner. My only NYC regret. Good luck on your freq search ...
and I don't mean the locals.

> > Thanks for any info,
> > Michael

OK, this can be done, and I did it (albeit not with a rather expensive FRS radio, but with a voice activated RS walkie talkie). You can get them for less than $20 buck in most cases and the range is close to that of the FRS radios. Plus, the connection is so simple, I'd venture to say even our resident loon could do it. (Maybe. With help. And a color by numbers book.)

Anyhow open up the radio and cut the little microphone piece off. Throw the microphone at the wall and listen to the pleasant "tink!" as it richochets off into oblivion. ;-) Seriously, you won't need it, and unless you are making radio bugs or something you can't use them for squat.

Now you have two nice exposed leads onto which a 1/8 inch mono earphone cord can be spliced with incredible ease. If you want to be really slick, you can cut a small notch in the case for the cord to poke out of.

Now, simply plug the scanner in and adjust the volume. You guessed it, when the scanner pipes up, it activates the VOX circuits in the walkie and transmits away. Cool!

Now one could adapt the same setup in the FRS radio, but a better idea might be to pick up a VOX mike for it and hack that, rather than risking damage to a $150+ radio.

I think that falls under the "just because you're paranoid doesn't mean we're not after you" FCC ruling of 1986. (Not to be confused with the "show me the money" IRS legislation passed that same year.)

-Phil

P.S. To all of those paranoid yahoos that are gonna come back with stupid questions, yes, you fools, it was a joke. Carry on - WHOA! LOOK OUT BEHIND YOU! Ha, ha, made you look....

Oh yeah, like it's only me. At least posts aren't another request for cell mods on a 235xlt, or frequencies for the Bunghole Alabama police department. If it bothers you so much why even make mention of it? Unless of course.... you're bored or something.

writes:
>
>what happened here that caused Cheek's web page to be shut down?

not his web page shut down....

seems the stink of mackeral, stunk up
Bill cheek's character enough so that
the ISP of which the Cheek GUY fell for
it...the fool. must be a relative of
the stink of Mackeral...you know him by
Mackey.

this aberrancy caused enough consternation
about the cheek guy posting against the
mackeral's existence as a human being that
the ISP of which CHeek was on got a boner
for the mackeral and hand-jobbed the cheek
guy off that ISP.

plenty people have demanded CHeek be let
back on...but this futt of untold odiferous
likings to the Mackeral's stink won't have
any of it. this ISP don't even answer
requests for why in the hell he took the
cheek guy off his "domain-inane"....

Cheek just don't give a damn about it.
He's just had it and i guess he's right
in that he don't have to worry about the
stupidity of an ISP who don't know what is
real from what he uses to make it with
whomever he does it with. artificially
made stuff.

Cheek got a bad rap.

mackeral got a "mute-point" award and
it was the size of his "brain"...it's
between his legs. It's called his
third knee...

Now we don't have the cheek guy helping
people with their scanner questions and
that is sad. Much like what Clinton is
going through with the Senate/Congress.

It's none of their business. He wants to
give Presidential Head, that's his biz. Just
like some idiot of a human being called the
Pope can make people kneel at his calling
and kiss his ass in front of millions and
not be impeached is ludicrous.

Kissing some piece of bacteria-laden metal
and not getting off on it...what a concept.

The keypad trick will only get the cell freq. test frequency for sure
on scanners with a date code *before*July 1994 (7A4). It will work
on *some* 7A4 dated scanners but not all.

I have tried several methods of recording the scanner on a camcorder at an airshow. Pluging the scanner directly into the microphone input was no good. You could only hear the scanner and not the planes, and when the scanner played it was over modulated and distorted.

Instructions: Strap the scanner to the camcorder. If your camera has a mount for a light, then build a mount to your scanner and put it there (this looks real cool). I used walkman type headphones from the scanner and placed one of the earpieces to the microphone. I was lucky in that my headphones stayed in place. You might have to tape the headphones down. Get a second set of headphones and plug them into the camcorder to monitor the audio. You should be able to get good sound of the planes and of the audio from your scanner.

The battery will take a 12 hour charge
The charge should last 8 hours
The only priority channels that can set are the first channels of each bank (channels 1,21,41, etc.)
I don't remember if there is a priority status indicator but if it is activated you should notice the selected priority channels blink intermittently as you scan all the channels

To search between limits, stop the radio from scanning by pressing the " manual " button

enter the low end frequency you want to start your search with, then press the " limit " button

then enter the high end frequency that your want to stop on, and press " limit "

then press the "search" button

when you find a frequency you want to listen to then press "hold"

I recommend activating the "delay" button when you are searching so that you don't miss any frequencies when the search stops

Are you new at shopping at radioshack? You went there without the
catalog number? You didn't just walk in and grab a flyer or catalog
and find what you want and walk the drone to the counter and watch
them type in the number? If not, you should start..you might even
begin to like the place..

On Sun, 4 Oct 1998 11:00:32 -0400,
in the newsgroup rec.radio.scanner,
"Clay Schneider" <clayxschneider@lucent.com>
from FASTNET(tm) PA/NJ/DE Internet thoughtfully posted:

> Fred -
>
> Please read my post carefully. My question was, basically, "how can 900 mhz
> spread spectrum have twice the range of 900 mhz spread spectrum [!?!?!]" --
> 'cause that's what their web page says.
>
> The handset to base transmits 900 mhz spread spectrum just like my several
> year old uniden. Only the base to handset works at 2.4 ghz. -- yes?
>
> Is the 2X range increase [as compared to 800 mhz spread spectrum, which is
> what they claim] only one way? What are they trying to say?

I would guess half-marketing hype and half engineering theory.

Here is a critical quote from their page:

http://www.panasonic.com/consumer_electronics/telephone/giga.htm
-
"Ordinary cordless phones use 2 signals to transmit and receive
(talk and listen) which operate on a single band. These two
signals can interfere with one another. The Panasonic GigaRange
phones actually use two different bands--one for sending and one
for receiving. A 2.4 GHz signal is transmitted from the base to
the handset, while the handset uses a 900 MHz signal back to the
base. The result is true duplex (two-way conversation) sound with
virtually no echo and greatly enhanced distance performance."
-

They are claiming that they can use more power because they use
"separate bands".

Using two separate bands eliminates the complicated antenna
diplexer, filter and receiver de-sens problems inherent to single
band duplex comms.

Even with a half-assed high-pass filter - the 900MHz transmitter
would not overload the 2.4GHz receiver front end like it would a
900MHz receiver - and visa-versa.

Now their maximum power output is only limited by FCC emissions
regulations - and not by receiver overload design
constraints/compromises.

That's what they are claiming...We'll see when someone actually
compares them.

Cheers,
Paul Grohe

I picked up one of these at a sale at R/S but I've never seen this model mentioned here. Is it any good or is it just a toy? Is it a Canadian variation of a more common model sold elsewhere?

For more info about this thing look at:

If your camcorder has stereo audio input, then it might be neat to have the scanner input on one channel, and the sound of the planes from your position on the ground on the other. But if you plug into your camcorder, it will usually totally disconnect the mic so you'll have to also carry some kind of mixer and mic.

If you do record this way, it could make an impressive tape when you copy to another tape and mix the audio.

On the other hand, will the PRO-64 pick up the Blue Angles? (Hey, must be their new name. Wouldn't be a typo, right?) Don't they use some wierd frequencies around 260Mhz?

Here is the original post you tried to quote out of context, looney....

Mackey and his cohorts like Healey have been playing basically the same game for over two years. It is called "kill a news group or two". You should take their harassment as a compliment. They would not be harassing you if they did not percieve you to be knowledgable on the subject at hand. These are the people they want to drive off the group, for several reasons. they have a problem with anyone they perceive to be an authority on the subject of scanners , or even radio in general. As a matter of fact, they have trouble with ANYONE they perceive as an authority figure. This is a carry - over from childhood, and they fit a certain profile. I will not bore you with the details , at least not now. They are a definite "type". Let`s just say they hunger for respect, Which they deem to be "attention" because they have no self - respect, and leave it at that for the time being. They have the typical adolescent way of getting "attention" - they agitate and harrass. I don`t see where anythiing Mackey ever posted "terrorized" this news group to any great degree. I think his prattlings are similar to what you hear on the CB band. And there are always a certain number of those who fit the same profile. These are the ones that jump on the band wagon and follow. Being basically immature, they don`t lie very well, and contradict

themselves constantly, depending what suits their purpose at the moment. They will literally swear "black is white", so to speak. This is what happened whenever Kendrick`s data was re-posted. He would try to "prove" the FACTS were NOT the facts. The pattern here never varies. He is losing ground just hanging around here, since nobody of any intelligence lends his babbling any credence. Have faith in your fellow news group denizen. People are really fed up with him. He is "old hat".

You should have no problem connecting to your camcorder's ext.mic from the scanner's ext.spk. jack. but the freqencies that the blue angles use not all will you be able to pick up with a conventional scanner. you need to find a site with the freqencies listing for the blue angles and see which ones you can pick up with your scanner. (I dont know anything about the pro-64)I can tell you this I have used my scanner with my camcorder and it works good.

If you have problems with ScanStar, you may have even more with ScanCat. I have both and can tell you that in my opinion, ScanStar is easier to use, more intuitive and gathers more info for you. ScanCat has a very nice display and works with a lot of radios, but its functionality is (for my uses anyway) less capable.

The European CPU has 12.5 khz steps in the cellular band BUT,,,,
The Pro-26 has selectable step size all you have to do is switch
the 12.5 to 5 khzs and you good.
Granted the the search might take a little longer but we cant have
everything can we !!

G'day

Can anyone help me decide on whether to get a mobile or base scanner... I'm looking at the BC3000 or the UBC9000xlt.

Could I use the 9000xlt in a vehicle? (is it practical?)

Thanx

Paul

Well, I kinda figured that since this a Amateur HT that *MAYBE* I wouldn't need to tap the discriminator. I guess I was wrong. I also tried it on my new IC IC-Q7A Mini HT and still no luck. Both attempts were using a wire going from the earphone jack directly to the PC sound card.

Message-ID: <19981004210726.24758.00006450@ng73.aol.com>
Source record: 142374

I have seen where someone has connected a baby monitor to their base scanner and used the handheld reciever to listen to the scanner and also by connecting a "soundfeeder" to the scanner and using a walkman radio to listen to the scanner.

My question is, is it possible to use an FRS radio to do the same thing? By connecting a cable to the transmitter of the radio (disable the push to talk button) and connecting it to the headphone jack of the scanner. That way when a transmission comes on the scanner it will be sent to the FRS and transmitted to another FRS radio that can be carried with you.

Please advise if anyone knows if this is possible and if so, is there a diagram that points out where the connections need to be made to the FRS?.

Thanks for any info,
Michael

Ok, since this operates the same as my 100, I'll take on the chore of
explaining the priority channels.
The first channel of each bank is considered a "priority" channel.
Therefore, with 10 banks....you could have 10 priority channels, the
highest priority being the channel 1 in bank 1.
If you have a priority channel programmed, and it is not locked out,
the scanner will check back to this channel on a periodic basis.....I
think every 1.5 secs.(?)
I personally like this feature of the BC's I load the first channel
of each bank with High importance channels, then fill the rest with
the rarely used, but hate-to-be-missed channels.
I think I put it all there.........any other questions?

Hello. I'm interested in getting a BC9000XLT, PRO-2042, OR PRO-2035 base scanner. All I require is that the scanner works 100% and is at least a 7/10 cosmetically, and that it comes with a manual and a power cord. I would prefer to trade for the scanner, but will consider a trade/money agreement. Here is what I have for trade:

-RS 4 Channel Microphone Mixer
-RS Stereo Pre-Amp
-RS PRO-43 Handheld Scanner
-RS Powerhorn 5w Directional External Speaker
-RS Handheld 1-1300 MHz Frequency Counter
-Panasonic BC-4C AA/D Battery Charger

I can provide conditions, and what comes with each item on request. Please let me
know if you interested in trading.

Michael:

I did exactly this, using the Motorola TalkAbout+, with the external ear-bud/VOX microphone setup!

You run your scanner as you normally would, place the mic from the FRS radio, near the speaker output of the scanner. When, and only when, there is audio output from the scanner, the FRS radio will kick in, and transmit the signal over your FRS radio. This way you don't tie up the FRS channel with a dead carrier when there is no scanner activity. Works great! It made me think, this might be a way to monitor scanner frequencies in a car, without having a scanner in the car! Too bad the range is so short.

Yup.

The "scenario" was a "bomb" going off in the city council
chambers during a council meeting. Part of the "fun" was for them
to figure out what "whaahappend", the type of gas, and how to
treat it.

There was a big article about the drill in the Sunday SJ Mercury
News (10/4).

Primary comms seemed to be on the fire "White" channel (154.28) -
that is probably what you heard.

in the newsgroup rec.radio.scanner,
johng@comm.mot.com (John Gilbert)
from Motorola LMPS thoughtfully posted:

> Interesting the spin Panasonic marketing puts on this.....
>
> They could make the claim that the old 1.7 MHz/49 MHz phones are better
> than the 46/49 phones because they use different bands and "are less likely
> to interfere with each other."

In a way it's true - but the 1.7MHz antenna system - to put it
nicely - sucked, because:

1. The ferrite loop antenna was directional - you had to
tilt/twist your neck to get rid of the "buzz".

2. If your home was wired with conduit or BX armored cable, there
was not enough exposed wiring to radiate the signal.

Years ago, I "inherited" my grandparents old 1.7/49 cordless
phone. It worked fine at their house - which was 1950's fabric
sheath wiring and wood frame construction. That phone worked for
up to a block or two (along the power lines). Farther than their
"new" 46/49 phone.

But when I got it out here, where we have armored cable and
stucco walls (embedded w/chickenwire), the phone could hardly
make it to the next room. Going outside was out-of-the-question.

The biggest problem for the 1.7 and 46/49 bands is the physical
size of the antennas. Those 6-8" whips are simply waaaaay to
short for the wavelengths - the electrical equivalent of a "wet
noodle". They are electrically "lengthened", but still physically
too short.

The 900MHz phones "went the distance" because just a 3" stub is
about a half-wave. 900MHz phones were now operating with "full
size" antennas - thus higher efficiency. That's why 900MHz phones
could boast about increased distance over 46/49 units - because
they could operate into a full-size antenna and not into a "wet
noodle".

> It isn't the duplexer that causes echo in these phones anyway. It's the 2-4
> wire hybrid which is required regardless of which RF band the phone uses.

You have confused duplexer with diplexer. I guess you could say a diplexer is the RF equivalent of a hybrid network. It allows the transmitter and receiver to share the same antenna w/o "talking" to each other.

A diplexer is a fancy 3-port frequency-selective filter that makes sure "A" goes to "B" and "B" goes to "C" and "A" does not go to "C" - where "A" is the transmitter, "B" is the antenna and "C" is the receiver. Every commercial repeater in the world has one.

Simply - it keeps the large transmitter signal out of the receivers input and sends it to the antenna. In a commercial repeater, this is a multi-thousand dollar item capable of greater than 90dB rejection. The $0.50 "diplexer" in a cordless phone (IF they even use one!) may top out at 30-40dB rejection.

Remember how your CB's sensitivity "dropped" when the guy down the street transmitted on another channel? Or how your scanner goes nuts when the high-power pager transmitter pipes up a few MHz down the band? This is receiver de-sens. Now imagine the problems when the transmitter and receiver are in the same unit - and running at the same time - sharing the same antenna.

At 40dB rejection, and 100mW transmitter power, there is still 1mW "leaking" into the receiver - quite a bit to a receiver. That "leaking" power can overload the receivers front end. So they either have to drop the receiver front-end sensitivity - or drop the transmitter power - or both. It's a compromise made at design time.

When the separation in frequencies is more than 3X, as it is in the case of the Panasonic unit, the diplexer is fairly simple and there is plenty of rejection available. They can run the 900MHz receiver at full sensitivity and the 2.4GHz transmitter up to the legal limit without major problems.

This is a greatly simplified example, but you get the idea.

> I agree with Paul...We'll see when someone actually tests one of these...

Somebody did....Theory does not always match reality...

I bought this scanner a few weeks ago.
Since then I have been trying to find some information
about the radio's computer interface (unsucessfully
so far).

So 2 questions:
1. I have the optional pc-cloning cable. Does anyone
know where to find out the command set for this receiver?
I have been planning to make my own cloning software.

2. Does this radio support Icom CI-V protocol (when using
the CI-V converter), or is there any other way to control
the receiver with computer (not just clone/edit the memory)?

Thanks in advance

Matti M.

Dick,

Check http://www.aorusa.com for the new AOR USA web site. AOR has recently established a corporate office in California and they are handling repairs. You'll find instructions on the web site. There's a $20 charge for an estimate. The $20 is applied to the cost of the repair if you have them do the work. EDCO/EEB no longer has any affiliation with AOR.

From: "Todd (kb0udf)" <tyler@nightowl.net>
Message-ID: <3619D592.7AC80324@nightowl.net>
Source record: 142086

The CORRECT (I just tested it again to make sure it
was correct) mod is 2, 9, and LOCKOUT while turning on the scanner. This
also wipes all of your memory locations but gives you the following
frequencies:
Channel-Frequency
1-138.150
2-162.400
3-173.225
4-406.875
5-453.250
6-511.9125
7-108.500
8-118.800
9-127.1750
10-135.500
11-157.800
12-482.3625
13-806.000
14-857.200
15-888.960
16-911.500
17-954.9125

The last 3 or 4 are out of the normal coverage area for the PRO-23 and
will allow you to scan up and down in the full cellular range. Hope this
helps.

MODIFICATIONS FOR THE PRO-37

The disassembly instructions are based on the excellent PRO-34 instructions
provided by Chris Scholefield (chriss@mid.com). I have added my own comments.

First of all, what modifications are possible?

The PRO-37 uses a diode array to tell its microprocessor what model it is, and thus which frequency bands to allow and what channel spacing to use. European and Australian models have full 800 MHz coverage (at an unknown channel spacing) and a VHF-Mid band (68-88 MHz) rather than a VHF-Low band (30-54 MHz).

The Canadian and US models differ in the amount of care taken to reduce EMI. The Canadian model has additional screening, and one or two other minor component additions to achieve this. Therefore, if you have the choice,
the Canadian model is preferable to the US model.

Changing from VHF-Low to VHF-Mid band coverage requires many component value changes (and realignment of the appropriate RF stage). Given that the PRO-37 uses SMT technology, it's not worth trying. (You can change the diode array easily enough, but just don't expect reasonable performance!)

The only sensible (straightforward) modification is the restoration of full 800 MHz coverage on Canadian and US models. The ranges restored appear with a 30kHz channel spacing - which just happens to coincide with the N. American cellular telephone channel spacing. A remarkable coincidence.

The modification described is therefore applicable ONLY to Canadian and US models. (European and Australian readers could always remove 800 MHz coverage if they wished:-).

You will need:

Soldering iron - with a fine point. (The components desoldered
and soldered are not SMT, but ....)
Desoldering tool - to remove excess solder
Philips screwdriver - if it fits the screws on the back of the

case it's the right size.
Small pliers - bending component leads while
unsoldering
and removing hexagonal posts
Earthing wrist strap - strongly advisable with CMOS
components.
(Static can cause premature, if not
immediate
failure of components). Wear this at
all
times.
Small screwdriver - for prying components etc.

Experience and confidence in working with modern electronics

A couple of hours without interruptions...

Instructions
---

0. READ THROUGH ALL OF THESE INSTRUCTIONS BEFORE STARTING!

1. Remove the battery

2. Remove the antenna

3. Pull to remove squelch and volume knobs

4. Unscrew the 4 screw on the back of the case

5. Separate the case beginning at the battery end and work over the
circuit
board and knobs at the top

6. Unsolder both connections to the antenna - ground can be bent away
and the
centre has a link to the board

7. Unsolder the two power switch links at the board end

8. Unsolder the ground connections to the metal shield

9. Disconnect the two connectors to the squelch and volume controls

10.Remove 4 hexagonal posts

11.The top board may now be removed by separating it gently from the
connector on the adjacent board

12.Remove 3 screws holding the shield in place

13.Lift the shield to separate it from the lower control circuit board

14.Identify diodes D12,D13 on the control board

15.EITHER cut the diode D13 and SKIP to reassembly OR continue to desolder diode

16.Remove last two screws and remove control board. Take care not to dislocate the KEY LOCK switch when doing this.

17.Unsolder screening from side of control board near diode array, and bend back out of way.

18.Unsolder and remove diode D13. Keep it somewhere so that you can replace
it if required to do so by US legislation.

Reassembly is the reverse of the above procedure.

If you performed steps 16-18 CHECK REALLY CAREFULLY that the metal part of
the KEY LOCK switch is in the right location. (Otherwise, you may find yourself having to disassemble the whole thing again - I know, I did!)

NOTES.

1. One must exercise great caution in the procedure. Check that no flakes
of solder get dropped on the boards. Take anti-static precautions by doing the work on a mat and wearing a wrist strap. Do
not make any adjustments to the upper analogue board or bend any of the
other wire links on it, which are tuned circuits.

2. Another caution is that doing any of the work will probably violate any warranty you may have on the scanner. Might be worth burning the scanner in for ~150 hrs before attempting this to reduce the risk of a latent component fault appearing after you have made the modification.

3. YOU PERFORM THE ABOVE PROCEDURE ENTIRELY AT YOUR OWN RISK. You may wish to obtain a copy of the PRO-37 Service Manual from Radio Shack before attempting this. (Cost about $20 - well written - just wish I could afford all the service gear required!)

4. If you happen to find out what adding D14 does (another difference between N. American and European/Australian versions), I'd be interested to know. It's not mentioned in the service manual. I think
it could affect 800 MHz channel spacing - any info on the European Australian PRO-37 specs in this area would be appreciated.

5. If you found something wrong in the above instructions, let me know and I will try and post an update.

6. If you found all this helpful, help someone else and donate $5.00 *today* to your favourite charity.

Share and Enjoy!

Realistic PRO-62 handheld 200 channel direct entry scanner. Works good, has a few scratches and catalogu sticker on back has been rubbed clear. It does come with rechargable batteries. Still has warantee sticker good till 1/29/2000, was originally purchased on 1/29/95. Frequency Coverage: 30-54 MHz (in 5 kHz steps) 118.0000-136.9750 MHz (in 25 kHz steps) 137.0000-174.0000 MHz (in 5 kHz steps) 380.0000-512.0000 MHz (in 12.5 kHz steps) 806.0000-823.9875 MHz (in 12.5 kHz steps) 849.0125-868.9875 MHz (in 12.5 kHz steps) 894.0125-960.0000 MHz (in 12.5 kHz steps)
For picture and other scanner/radio items I have forsale check out my web site at http://homepages.infoseek.com/~radionuts
Thanks
George

Brad: As a Funeral Director many years ago,both in Ontario,Canada and in Vancouver, B.C. The laws do differ. In Ont. as in Mich. funeral pro. have the right away were as in B.C. No laws or courtesy are given. I must look up the history of the right away question.

It's not just children who don't pay attention it also is adults. As a city bus driver, passengers get off the bus and cross in front of bus,(without looking) thinking they got off a school bus. We can say educate but as we know (in one ear out other)

All the best
David
Van.B.C.

Same as 20 years ago with some changes. See my page for the info:

http://www.erols.com/jcardani/sepascan.htm

The 30 some 800 frequencies are reserved for a future trunked system
that is still in the very early planning stages.

I will be moving soon and will not have time to keep up with scanning.
Have the following used radios for sale, all are in excellent working and
cosmetic shape, no modifications to any. All original parts, software
included. Not trying to make anything on these, just need to sell before I
go.
Email me if interested in any.

BC895XLT (no manual, no box)
BC9000XLT
AR8000B
IC-R10
Sony Wavehawk SC1PC w/software and cable
Alinco DJ-X10 (3rd generation)

Opto Scout w\reaction tune cables for IC-R10, AR8000 and N100 FM notch
filter, BP800 filter and BP70 filter, also all Opto Scout antennas for
Scout.
Opto TechToyz Micro Counter w/antenna
Opto TechToyz Micro DTMF Decoder
Opto TechToyz RF Detector w/ antenna
Icom CT17 level converter w/cables (2)

Dick,
I repair scanners as one of my hobbys.
I have repaired quite a few AR8000s.
Lots of simple fixes also, sputtering squelch, audio-scan fix,ect.
I am a electronics tech. and enjoy my scanning hobby very
much and am always willing to help a fellow hobbiest.
Let me know,
Eddie Kosloski

He is intelligent, has excellent insight but the conclusion is correct. He just doesn't see the need to overstate the obvious..

> > I see a common thread between Bill Cheek, allsafe and I.
>
> Yea, you all cause problems!

And what problems would that be John? Tell me ONE thing that I have done that you have not. You can't. I'm no angel, that's for sure, but you are no better than me. And I have noticed something. That REALLY bothers you, don't it?

Meanwhile, I can claim innocence to several things that you have done. Canceling posts, forging posts, exploiting open servers, creating false identities, etc. Oh, but that couldn't have been me, you claim...

Yeah, right, chicken little... in your desperate attempt to destroy everyone you don't agree with, you have proven only one thing:

John Mackey is a petty, childish, dimwitted liar.

And the more you try to deny it, the more it becomes obvious to us all. Go ahead, Pinocchio. Tell us another whopper, and watch that nose grow more and more...

I would think that it would be easy to have your automatic call distributor prioritize the trunks. I know that ours does. 9-1-1 calls come first, and then the published non-emergency 7-digit number.

It seems to me:

1) That 3-1-1 calls could be easily slipped into this as the third category/priority.

2) True 3-1-1 is going to need more operators, since you're also picking up calls for service that would normally go to other agencies, such as public utilities, streets, and just general information.

3) People will always dial 9-1-1 (or 3-1-1) with inappropriate calls because:

a) they can't remember any other number
b) the call is free
c) they have cellular phones that are not subscribed to any services, but the
cell companies have to provide free 9-1-1 calls.
d) they don't know any better
e) they have it programmed on a speed call button
f) they don't know which agency they need (e.g., snake calls: is it fire department,
police department, public works?)

Well, Mackalooney - Tune would define shizophrenia differently, depending on just who he thinks he is at the moment. You know the drill, everything is relative, including truth at the time of the telling versus the last time, etc, etc, etc
With the looney, "shizophrenia" would be when he thinks one of his old forged posts is actually from somebody else, and starts drafting nasty replies to himself. Other times, he might "meet himself coming back", so to speak. (Most Mackaloonies employ cricular logic, you see).
then again, it could be "paranoid" shizophrenia (with the emphasis on the "noid" part. This would really be a bitch if a message he had done a rogue cancel on came back again to haunt him.
Of course, in this case, he would think everybody was "out to get him" all the time. (Would we do something like that ?)
Of course, if he thinks he is Bill Cheek at the moment, he might TRY to expouse on radio theory, but it just comes out " pseudo science".
And of course , there is the "Captain America" personality, where he tries to save the world, (or the news group) from "evil dark forces" that are "plotting against the news group". And of course there are his comments about the "other repoonsible members of this news group" who "aided him in his crusade against the evil Cheek".
Yes, indeed , it is a full day every day, when you are a Mackalooney!

From: trev@aero51.demon.co.uk
Message-ID: <36209e74.2732077@news.demon.co.uk>
Source record: 142139

Hi,

Can anyone help. I am using WACARS v0.6 and have selected the "Use DDE link to AirMaster 2000" to plot aircraft positions via the Air Master 2000 V1.22. The demodulator for the AirMaster 2000 is connected to my COM port, so I am not using the old/new sound driver option.

My problem is that when an aircraft position is plotted on the map I only get a blank, white box where the serial number should go. How do I get the serial number plotted next to the aircraft position.

I am using a Pentium II MMX 333, 192 Mb, AWE64 sound card and the AR8000 scanner.

Thanks

Trevor

I always have to laugh at these anti-radio shack postings.

We all know that radio shack employees are not fit to sell ass-lint, yet so many of us insist on shopping there, or whining about the sales droids... Granted, they are idiots, but we are all fully aware of that obvious fact when we CHOOSE to shop there. The point being, unless you are educated enough to do your own homework and know what you want before you go there, you should not shop there, or at least not whine about it. They obviously have no desire to change, because this problem has existed since tandy's birth.

At least stop taking up bandwith in the newsgroups with this rambling. take up radioshack's bandwith instead.

At 10:10 AM the call came through on the fire department dispatch
frequency:
"Explosion in the council chambers...repored that something was released
into the air...victims are convulsing".

Sounded like the chemical attack scenario.

FD switched to the white channel - 154.28
PD was on SJ 9 - 460.1
Heavy med activity on the basic life support frequency (453.1) due to a
"multiple casualty activation"
Minor radio traffic on county fire 3 (153.845), SJ Search and Rescue
(155.925), and the usual medical dispatch frequency (856.4375)

had mine with original batteries for several years. I charge 'em up when
their dead for the usual ni-cad battery charge time of 16 hours.
I usually can get say 7 hours of use from it.
I leave it hooked up to my car cigarette lighter power 99% of the time.
Say 1 or 2 times a year I'll run it dead and then recharge it for the 16
hours.

Okie-dokey dude. So how's it going there ya lil' "Defender of the nonmetallic Tool" man? You're quite a tool yourself, ya know. Are ya working on legislation? Don't mean to be presumptuous; but I would assume that a person so passionate about the use of nonmetallic tools wouldn't limit his efforts to a mere NG. Noooooooo. I bet you've copies of the drafts you sent your congressmen? Don't you?

Any chance we could get a peek?

I, for one, am curious about the extent of your activities to further the use of nonmetallic tools. Just how far will you go?

Oh,...I'm not challenging your technical info. (Although I suspect it's faulty....I mean everything *else* is faulty about you....why should this be any different?)

But in all fairness: I've seen a manufacturer service manual recommendation for adjusting an RF oscillator. Special tools. I've seen 'em referenced before. Lotsa times. 15 years of automotive service manuals. You should see all the wing-ding "Special Tools" those manuals say you should use. But most of the time, you don't need to buy that tool. Chances are,....you've already got something that'll work just as good or even better in your toolbox.

The trick is knowing the full capabilities of the tools you *already* have. A few examples:

SERVICE MANUAL: Depress single brake caliper piston with FMOCO Service Tool #234433 until lip of piston cup is flush with caliper housing. Labor: 20 min.

WHAT THE GUY IN THE BAY DOES: Squeezes that puppy back into the caliper with his largest pair of Channel Locks. Done: 18 seconds

But specialty vehicles often require creativity. This is when you need to know the *full* potential of your arsenal of tools

SERVICE MANUAL: Depress dual brake caliper pistons with FMOCO Service Tools #234713 and #234714 until the lip of each piston cup is flush with caliper housing(s). Labor: 25 min.

WHAT THE GUY IN THE BAY DOES: Squeezes those puppies back into their caliper housings with his largest pair of Channel Locks and a piece of flat steel across both pistons. Done: 19 seconds and maybe an extra "grunt".

I imagine there's lotsa stuff in service manuals about radios that people simply don't do.

So you don't agree. The risks aren't worth it. No big deal. Most folks just offer their opinion and then move on. You, on the other hand, have turned it into your own personal loony crusade. How many years have you been carrying on about this "Nonmetallic Boy?" (Just a tip: methinks you've attached yourself a tad too closely to this cause; downright "obsessive-like," if ya ask me.)

Dont'ja see it?

You friggin' loon.

Try "Scanners Unlimited" in San Carlos its in the yellow pages.
They make up pretty good freq. lists/books for any part of the bay area.
Accually i think they have lists for just about anywhere in the state.

Happy scanning,
JF

I recently came across 4 of these and was wondering if there is any info on them available

they all are simplex and have 8 dip switches under the battery - what are they for? and there is a 1-2 switch that doesn't do anything either - are these programmable? or set at factory - any info appreciated as they are on the same freq. as our neighbors

The truth is Mackey baited Bill and Bill fell for i! .He should have been civil to the jerk while he hired a lawyer to get the jerk off his ass. But it is too late for now. If you follow Mackeys posts you will see very little that is positive or helpful but little that is obviously abusive to someone looking in from the outside, it is the lies and the persistence that he uses to provoke his victims to indescretion. Be warned he will save your posts about him and use them against you.

I think your logic did not take into consideration the fact that when you have a transceiver with a dedicated transmitter on one frequency and a dedicated receiver on a totally separate frequency with their own separate antennas, they can be optimized for performance. In this case the handset has a dedicated transmitter on 900mhz with it's own antenna and no duplexer to attenuate the transmitted signal and thereby can have a cleaner and more powerful signal. Handhelds with totally 900mhz rec/xmt capability are compromises at best. Does that clear things up?........enjoy...

Depends on the condition but if you use channel 40 (highest channel =
highest frequency) with full power (4W AM), you should be able to
transmit at least 4-5 km direct. If you live in the rural area with
flat land, the distance may be twice or triple as much.

i've used mine at several race tracks(indy 500)walking up and down the pits
and get hit after hit of conversations between drivers and crews, mine
reaction tunes an AR2700.
distance from transmitter is not necessarily the determining factor
relative background signal noise plays an important factor.
maybe some one with more expertise could explain this further.
all in all i'm pleased with my scout/AR2700 setup.
hope this sheds some light.

I'm looking for another Uniden MR8100A mobile scanner similar to one I purchased several years ago from Scanner World. The unit is no longer manufactured by Uniden. The scanner has 100 channels and is PC programmable allowing for an alpha display. It has a smal, flat control head with a separate speaker.

If anyone has suggestions for a source, please email to cadams@aeneas.net.

Thanks ...

There's "Moderation" already offered in scanning mailing lists. Are you under the impression that the forces of the "USENET" will bring moderation to bear on the NG if levels of "spam, flame and generic crap-o-la" aren't at acceptable levels?

Usually doesn't work that way. Quite often, a "moderated" NG will spin off of an
unmoderated NG. Then off you go!

> These two newsgroups
> remind me so much of the CB bands in the mid 70's when anyone and their

> spout off about the most mindless blather...

So lemme see if I got this straight, you dealt with exerting control over CB'ers you didn't like by embarking on trespassing and destruction of private property, but the current "level of anonymity for knuckleheads" denies you a target for similar criminal activities on the Internet. Is that it?

> I will speak of this no more.
>

That's probably a good idea. But I dunno if you'll do it. That's up to you.

From: Kenneth Chirko <chirko@xnet.com>
Message-ID: <6vhc7olro1@flood.xnet.com>
Source record: 141987

Hi David,

I'll try to help... I have the service manual for the PRO2005.
According to the trouble shooting section, the backlight is
driven by: T501 and Q508. One recommendation is to
replace the defective component when the backlight does
not light. Q508 is a chip NPN transistor: 2SC1623.
T501 is a transformer inverter: 5N75TK.

The other recommendation is to replace the EL if it is defective.
EL501: GE-88D-7738

I sincerely hope that helps!

Regards,
Ken

You dont NEED to get the goop off!!! Just get the service
manual and follow the circuit traces out from under the goop!
U would be surprised at where they go and that it is much more
EZ than soldering to the chip.

Oh, BTW, this mod forces the UHF filter ON when U are listening to
standard comms in the unblocked 800mHz range, so you will pick up
a lot of crap from 300-500 in the 800mHz range.

Also, this puts the gooped up chip under an exterme amount of stress
by FORCING a LOW gate output HIGH (the two filters are NOT meant
to be on at the same time) since they are now SHORTED TOGETHER.
I've seen a few of these with toasted boards becuz of this. Since they
are gooped up, guess what??? You throw it away and get a new one!

To prove a point, just measure the current consumption of the scanner
before you do the mod in the MANUAL mode with the unit squelched and
rx in the 300-500 range. Do the Mod then check the current just like
before.
You'll see quite a difference. (I noticed this when one I was working on
flashed
the "low batt" signal when it scanned the UHF & 800 freqs programmed into
it.)

I have spent all day (and night) moving and improving my website "HoustonScan." AOL's 2 megs of webspace just wasn't enough. I think it looks pretty cool, but I am concerned that the navigation console might not work with some of the older browsers. If you have an older browser and have problems navigating the site, please email me. I have added a chatroom that I plan to have open for regular discussion on monitoring Houston's communications on Sunday nights at 8pm CST.

In article <6uk0ba$f2n@ssbunews.ih.lucent.com>, parnass@marconi.ih.lucent.com
blathered on about...
>
>If your Wards BC220-clone works ok and has a bright display,
>I wouldn't replace C98 just yet.

Check. Everything seems to work OK. Also added some heat-sinks,
as advised. I did resolder about a dozen of the nastier-looking
solder joints and left the rest alone. With that and the keypad,
the radio works fine.

>Hope you can locate the proper Chromerics keypad to replace
>the worn pad.

Yep; ordered a used, tested one from G&G as they didn't have any new
ones. It was a perfect replacement and worked fine. It was actually
a "Chromerics" with "Chromerics" logo and stickers; the one I replaced
was the same design but from "Amp" (Amphenol, I think).

The trouble with my original keypad was mostly that the melted-over
plastic studs that hold all the layers together were broken off in
several places. The owner of the scanner kept it in a dusty location
and attemped to clean it with a shop air hose, which I think did in
(delaminated, basically) the keyboard.

Before I found out they had replacement keypads, I toyed with the idea
of making my own. I think that some of the tiny square pushbuttons as
found behind the front panel of VCRs and TVs would work; possibly with
a bit of filing on the button for height clearance. I made some
measurements and there seemed to be enough room; the only thing that
would seem to be problematic is that the buttons I looked at aren't on
a standard 0.1" pin spacing for use with perfboard. Nothing you
couldn't fix with solid pc board material and really tiny drill bits.

After the mechanical part is done, it would be simple to wire up the
buttons in the same matrix as the original keypad. I would remove
the flat-cable connector on the processor board and connect the new
keypad to the processor board with a short piece of ribbon cable.
Maybe a ribbon cable with DIP plug on one end to facilitate later
removal. At any rate, I got the "correct" keyboard so I didn't have
to go this far; just wanted to put this idea out for any comments.

Thanks very much for the advice! I appreciate it.

The software I use has programming only.

It programs Frequency / Tones-PL/DPL / Alpha Title (7 Characters)

It allows you to save an infinte amount of files, so you program different lists.

If you have any further questions email request.

satellite subcarrier audio freq. are typically 5 to 8 MHz... you are thinking
of the actual DOWNLINK freq, which must be received by a "dish"

692. FS: Icom R-100 Scanner/Receiver

Newsgroup: rec.radio.scanner
Date: 1998-10-07 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <6vfq58$c9k$1@eve.enteract.com>
Source record: 142047

Hi! I have an Icom R-100 mobile scanner/receiver for sale; some specs:

100 kHz - 1856 MHz *continuous*, 800 MHz unblocked
AM, FM, WFM
100 Memories
20 Scan Edge Memories
AFC
Auto Noise Limiter
Keyboard Entry

Dimensions: 5.9 (W), 2.0 (H), 7.1 (D), 3.1 lb

The only functional problem with the radio is that the display backlight is out; it works perfectly otherwise. It is a cosmetic 6-7/10 (just normal wear for a mobile rig). Includes the manual, mounting bracket, power cord, and factory box.

$400 + shipping. No trades, please.

Please drop me a note if interested.

73,

Paul WD8DKY

Body handling: HTML body converted to readable text

You can use any ICOM CI-V converter. The ARRL handbook (I think 1997
but may 1996) has one in it. You can build it for less than $20 bucks.
I am using it for both my ICOM 706 and the Alinco and it works fine.
You could go an buy a standard ICOM CI-V box from somebody and then
all you would have to do is build a special cable for the Alinco.

Have Fun...

Source record: 142052
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Does anyone know who uses 162.225 in the Los Angeles/Long Beach area. I am getting fairly strong voice traffic on it. I had it as a USCG frequency but I'm no longer convinced of that. The quality of the radio sort of sounds like a marine radio, but the traffic seems like pick ups and deliveries. I am picking up both sides of traffic. Only thing I can think of is that maybe it is some sort of USCG maintenance frequency for Long Beach or Terminal Island. The radio discipline does not appear military, however, I've not been able to dope out exactly who uses it or the locations they are referring to.

Someone has suggested that it is a possible USPS input frequency. Given that I can hear both sides of the traffic, I'm not sure of this. Nothing that I've heard would allow me to confirm or deny it.

As a separate note, if anyone has any other USCG frequencies for the LA/LB area, apart from the
standard Marine channels (1-83) I'd greatly appreciate hearing from you.

Thanks.

Well, one would hope that any antenna mounted outside would at least perform as well as the antenna that comes with the scanner! Various indoor and outdoor antenna configurations have given me varying results over the past several years.

Despite the type of antenna, the one chief reason I have found to be the culprit when troubleshooting poor performance as more often than not comes down to finding and fixing a problem with the coax cable or the connectors on the coax.

1) Adapters between the various connectors and scanner sometimes do not make good contact.

2) Connectors are improperly assembled. A short circuit between the outer braid and the center conductor of the coax seems to be a common problem. (Those little metal hairs will get ya.)

3) The coax cable has a break in its length. This is inconvienient to check if it's already installed on the roof, etc. Easiest way to test is to disconnect from antenna and short one end with a clip lead. Measure with an ohmmeter across the inner and outer conductors at the other end. You should see some low resistance, usually less than 100 ohms. Remove the clip lead. Measure the resistance again. The ohmmeter should show an "open circuit" between the inner and outer conductors now. If there is not an open circuit then check for the connector shorts in #2, above.

Just how much "off-topic" spam, flame and generic crap-o-la do we all have to suffer here, before we get moderated? These two newsgroups remind me so much of the CB bands in the mid 70's when anyone and their brother were on, blah blah blah, and didn't have a clue. And the only way to get them off the air was to have a coax cutting expedition sent over to the offending parties. Too bad that the technology of the internet brings with it a certain level of anonymity for knuckleheads to spout off about the most mindless blather...

P.S. For those who remain on topic and within the scope of the groups, my apologies for this bandwith. For those who perpetuate the roots of stupidity and continue with the endless threading of garbage and nonsense in this newsgroup, my contempt.

I will speak of this no more.

707. Antennas.

Newsgroup: rec.radio.scanner
Date: 1998-10-07 00:00:00 UTC
From: stevek@io360.com
Message-ID: <slrn71nejc.ej9.stevek@spheara.horizonlive.com>
Source record: 142062

I'm looking for some technical information about antenna design and construction. I've been looking on the web, and naturally what I find is lots of Ham antenna designs.

Of course, Hams are transmitting as well as recieving, so their needs are different than ours. But how much of what I read about ham antennas is applicable?

1) Is impedance mismatch as much of an issue? Obviously we don't have the same concerns of blowing up our equipment with a high SWR, but we do want the signals coming from the antenna to make it into our scanners, and not get reflected back to the antenna..

2) Are ground planes necessary for reception? I haven't seen anything clear about this, but I've read some stuff that would infer that ground planes are bad for reception, and result in a "loss of sensitivity" (I'm not sure what this means in terms of the antenna/transmission line system).

When I had this problem (BC100) it turned out to be a bad solder joint
on the board where the power adaptor plugs into. The thingy that the
A/C adaptor plugs into had broke loose from the board. If that's not
it, I suggest looking around that board for other solder related
problems.

Did you mean BC-235XLT and BC-895XLT?

I found the IFs while testing these scanner for Monitoring Times
and placed them in the FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with
300 channels in 10 banks. Can scan or search in
conventional or trunked domains but not at the same time.
Scans Motorola Type I, II, IIa 800 MHz trunked systems, but
only one trunked system at a time. Programming Type I and
IIa systems requires knowing the Fleet Map ahead of time or
else using exhaustive trial and error. A query feature
identifies duplicate memory channels. Very fast scan and
search rates. Scans 64 channels/sec and skips empty
channels. Service search. Data skip. Triple conversion,
254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and
intermod immunity. Fairly good audio. See "The Uniden
Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring
Times, July 1997 or an on-line version at http://www.grove-
ent.com for a review which includes quantitative test
results.

[...]

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300
channels in 10 banks. Covers military air band, but other
frequency coverage is limited compared with the BC9000XLT.
Predetermined AM and NFM modes not selectable. Can scan or
search in conventional or trunked domains but not at the
same time. Scans Motorola Type I, II, IIa 800 MHz trunked
systems, but only one trunked system at a time. Programming
Type I and IIa systems requires knowing the Fleet Map ahead
of time or else using exhaustive trial and error. Weather
alert siren. Built-in CTCSS decoder and tone finder. A
query feature identifies duplicate memory channels. Test
unit scans 85 channels/sec and skips empty channels. Triple
conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800

MHz images in commercial and military air bands attenuated
over 35 dB. For technical test results and a review, see
"The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in
Monitoring Times, December 1997.

715. PRO-51 Resetting?

Newsgroup: rec.radio.scanner
Date: 1998-10-07 00:00:00 UTC
From: John Harper <j..harper@att.net>
Message-ID: <361BDC71.4EC2@att.net>
Source record: 142070

Can anyone tell me how to clear all the
memory channels in my PRO-51? I lost the
owner's manual :-(

Gracias,

Turn the scanner off.
Press and hold the 2 and 9 keys and turn on the scanner. This will
reset.....

They are crystal controlled, the 1/2 allows for second channel if chrytals installed....The dip switch is for PL or DPL the code is set by the switch locations.....if you put PL or DPL on different code than neighbors you won't hear them, you can tell if they or someone else is xmitting on the frequency the red LED will flash when receiving a signal....hope this helps

Why not just carry the scanner with you?? They are just about as small as FRS radios, and you'll have the controls with you.

I had the same problem with two different battery packs for my BC-200.
Actually I think the BC-200 and BC-100 use the same pack. Anyway, as
stated below, my problem was also a loose solder joint where the power
jack was soldered to the pc board.

For sale:
I'm clearing out the shack!!!!

PRO 51
200 channels with Hyperscan.
29-956mhz(no cell).
Very small and compact.
Works perfectly, but case has a few minor scratches. Keyboard button paint is slightly worn off. But let me reiterate it works perfectly. LCD is in good condition. Includes NICAD battery pack and a new flex antenna.
Asking $135 or best offer. Price includes shipping.

PRO 46
100 channels.
29-956mhz(cell?????).
For parts or repair only. Missing antenna jack. Thats all that I can see wrong. I am told it can be modded for cell, but I am unsure. Its yours for $40...as-is. Free shipping.

Please respond via email.

Source record: 142160

Hi John,

It just depends on what you want to do with them, and on your budget. The Cub is a low-cost (however very good quality for it's price) frequency counter, which plain and simple captures the strongest signal around, and displays it on the screen.
The Scout, however, has 400 memory channels, backlight, signal strength display, beep and vibrating capture alerts, and can be connected to an AR8000 for reaction tune, or to a PC to download the captured data.

Both work absolutely great, but my experience is that the Scout is more sensitive than the Cub.

Cheers,

Mike

Anyone know if the RS-232 computer control aspect of the Relm MS200 is just for programming the frequencies, CTCSS tones, etc., into the scanner only. Or does it also perform logging functions, ie logigng date, time, frequency, CTCSS tones recieved, etc., or does that depend on the software program used ?

743. North Atlantic Radar View Last Night and Log

Newsgroup: rec.radio.scanner
Date: 1998-10-07 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981007040407.13230D-100000@alfa.ist.utl.pt>
Source record: 142177

Hello

North Atlantic Airspace is better each day!
43 flights in 51 minutes received using only 3 different
frequencies.
Many SELCALs received and some interesting flights including a
German Airforce A310 flight GAF875 which I think was carrying german
ministers from the G7 meeting in the USA.
The frequencies received were 5598, 6628 and 8906 KHz all with
excellent signals and very busy. The centers were, as usual, New York,
Gander, Shanwick and Santa Maria.
If you want to take a look at the airspace at that hour just
download:

'http://www.geocities.com/SiliconValley/Lakes/9420/shotex9.gif'

The log file follows.
Hope you enjoy this post.

Best regards, Andre Brandao

744. BC200xlt power problems

Newsgroup: rec.radio.scanner
Date: 1998-10-07 00:00:00 UTC
From: mpincock@juno.com
Message-ID: <361b0388.1674039@news.ida.net>
Source record: 142178

I own a BC200XLT. Great handheld. Of late, I am having power problems. The problem is that the scanner will not turn on unless it is plugged in to the charger. When the charger is then removed, the battery symbol turns on and of course the scanner shuts off in 10 minutes automatically. I thought it was the battery, so I replaced it. The new battery did not help. I know the battery voltage is fine (over 7.5V). Any ideas?

Bill is gone from this newsgroup and apparently not coming back. Why don't you people knock this crap off and get on with your lives and quit cluttering up the newsgroup for the rest of us? Of course, the fact that he hasn't posted a message in two months and this shit still goes on sure points to who the real troublemakers were all along, doesn't it?

747. Bearcat 220 Problems

Newsgroup: rec.radio.scanner
Date: 1998-10-08 00:00:00 UTC
From: Mike Derryberry <michael.derryberry@cwix.com>
Message-ID: <361D139F.C0027531@cwix.com>
Source record: 141932

I have an old Beacat 220 that up until recently has been working great.
It still receives everything with no problem. The problem is it loses
it's memory one channel at a time. I'll program it and within 5-6 hours
channels will one by one start showing "Error" with an out range
frequency, or just have a different frequency than programmed with.

Any suguestions ??? Help ...

Thanks
Mike

Please reply to e-mail & the newsgroup

If you haven't fried the radio yet then that cord won't hurt the radio. If there was going to be a problem you would have known it the first time you tried it.

751. Re: A TALE about Radio Shack u never knew about....and is it raw-esque

Newsgroup: rec.radio.scanner
Date: 1998-10-08 00:00:00 UTC
From: Tim Wood <timfy@csi.com>
Message-ID: <O#aVJiv89GA.287@ntawwabp.compuserve.com>
Source record: 141936

Although I have to admit that RS assistants are cerebrally challenged, if it wasn't for the fact that they make radio equipment freely available on every high street then I'm sure that our hobby would be long buried by now. I for one bought my first scanner from RS and if it wasn't for that.albeit crappy, scanner then I would not be so deeply into it now. If you buy from a store that pays it's staff peanuts then you can't expect too much in the way of one on one backup. From what I can make out they sell to the lowest common denominator. I dont think that they have ever stated that they are experts in the field of radio communications but they do feed the "newbies" of our hobby.

oh oh....here comes the flames.....Timfy

Yes you have, you just don't realize it. A cordless phone is divided into two pieces, the mic is connected to a transmitter, the earphone is connected to a receiver, there is practically no connect between these two parts. When you talk your handset sends your voice to the base, the base receives it and puts it on the 2 wire hybrid, this hybrid makes your voice go to the transmitter of the base and the receiver of your handset. In essence you are hearing an echo of your voice, the difference is that the time delay is so small you can't hear it. TTYL

>FRS radios, and you'll have the controls with you.
>

Where I live, A handheld scanner will not pick-up very well, lots of static and breakup.
Using a base scanner and an outdoor antenna, the signals come in great. Need something to transmit from base scanner to handheld for good reception.
Michael

..It's the SAME answer for the last couple of years......you need to change out the CPU chip which has the look up tables for the frequencies. The cellphone freqs are just NOT in there anymore. AND the chip is not available to anyone in the US (wxcept Uniden.....(;>)...)!.....better yet just take a trip to Europe and buy a BC235 over there and bring it back,,,,it's a lot simpler in the long run....enjoy.....

Fred

760. FS: Voice Logging Recorders

Newsgroup: rec.radio.scanner
Date: 1998-10-08 00:00:00 UTC
From: n3jpu@erols.com
Message-ID: <361f4c11.8494239@news.erols.com>
Source record: 141945

I have some Racal Wordsafe VHS voice logging recorders for sale or trade.

These are recorders used by 911 centers and other applications for recording Radio and/or Telephone. These units record 32 channels on 2 T160 VHS tapes for 48+ hours (24+ hours per tape with automatic change over). The dimensions are 19" wide, 8.75" high.

The recorders on playback can automatically fast forward or reverse to the next message, play it and then go on to the next messages. Microprocessor controlled with many features. I can e-mail additional info if interested.

I have 2 rackmount recorders and 1 desktop version (and a 4th for spares).

All units are in extremely clean and have shipping boxes. These recorders originally sold for about $25K new. These were trade-in's that we took back and I can only get rid of them for hobbyist use (i.e. SWL, Scanning or Ham).

So if are looking for a professional way to record multiple radios this is it. They also work great as an audio multiplex unit as you can listen live to any combination of channels.

I am interested in trading for high quality radio equipment (commercial or mil-spec radio's, Ham equipment (looking for a 50 Mhz and 144 Mhz Amp of 400+ watts), wideband V/UHF receivers). Or possibly cash of $1000-$1500 plus shipping from MD.

Hi Dan,
You don't need to order a unblocked from the UK, order one from CEI
for less money and no worry (customs). Yes it's blocked, BUT not for
long when you run the program you will find here:

You simply need to replace the EL. To "see" what one looks like,
visit http://dune.globe-net.net/~rc123/Robert/
To learn how to replace it, visit:
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner/Repair_Tips_for_Radio_Shack_Scanner_Radios

Takes about $30 and 1/2 hr. If you know how to solder and own
a screwdriver, this isn't a tough job! The correct part number
for the PRO-2005 EL is 10800050. The cost is $29.69 plus tax
and shipping. Replaced mine last month.

Do you have a ZIP drive? If so, the answer is simple. Iomega is
offering a free program on their website called Recordit. It
stores audio in an MPEG2 format (I believe) onto the Zip disk.
It has 4 audio quality settings. The least will record up to 10 hours.

Get it at http://apps.iomega.com/product/recordit/index.html

or at the un-official page:
http://www.juip.com/

Zip drives are going for $119 locally now. Certainly less than one
of the modified tape recorders you are referring to.

Yup. Uh-huh! That VCR recording thing. Done that. Works just great. Great audio quality too. If you need long record time, that's surely the cheapest way to do that.

To do it, your VCR source selection should have an option for "Auxillary Input" right along with "Cable", or "Antenna". With "Auxillary Input, the two RCA jacks in the back for video and audio are live. Just feed the scanner audio to the VCR audio RCA jack and ignore the video RCA jack. If you play it back through the TV, you'll either get static screen or a blue screen and all of the audio you recorded. If the VCR supports "indexing", that's even better, that way you can mark points on a recording for easier cueing when you rewind.

It works. Cheaply.

> http://broward.home.ml.org

2004's were notorious for bad solder joints on the circuit boards. If you have an intermittent unit, examine all the solder joints and touch up all the questionable ones. When the battery goes dead, the scanner will beep repeatedly. Replace the battery with the radio rurned on and you won't lose the channel data.
Good Signals,
-- Chuck

CALIFORNIA CODES
PENAL CODE
SECTION 635

635. (a) Every person who manufactures, assembles, sells, offers for sale, advertises for sale, possesses, transports, imports, or furnishes to another any device which is primarily or exclusively designed or intended for eavesdropping upon the communication of another, or any device which is primarily or exclusively designed or intended for the unauthorized interception or reception of communications between cellular radio telephones or between a cellular radio telephone and a landline telephone in violation of Section 632.5, or communications between cordless telephones or between a cordless telephone and a landline telephone in violation of Section 632.6, shall be punished by a fine not exceeding two thousand five hundred dollars ($2,500), by imprisonment in the county jail not exceeding one year, or in the state prison, or by both that fine and imprisonment. If the person has previously been convicted of a violation of this section, the person shall be punished by a fine not exceeding ten thousand dollars ($10,000), by imprisonment in the county jail not exceeding one year, or in the state prison, or by both that fine and imprisonment.
(b) This section does not apply to either of the following:
(1) An act otherwise prohibited by this section when performed by any of the following:
(A) A communication utility or an officer, employee or agent thereof for the purpose of construction, maintenance, conduct, or operation of, or otherwise incident to the use of, the services or facilities of the utility.
(B) A state, county, or municipal law enforcement agency or an agency of the federal government.
(C) A person engaged in selling devices specified in subdivision (a) for use by, or resale to, agencies of a foreign government under terms approved by the federal government, communication utilities, state, county, or municipal law enforcement agencies, or agencies of the federal government.
(2) Possession by a subscriber to communication utility service of a device specified in subdivision (a) furnished by the utility pursuant to its tariffs.

Now since noncellcapable scanner equivilents exist for this scanner, it would imply that this scanner is designed different from the noncell model only to eavesdrop, which makes it illegal to manufacture, assemble, sell, offer for sale, advertise for sale, possess, transport, import, etc...

No what busta.

You don't need to hold an individual licence (ok, license for you US
types!) for a cellular phone! The network company holds a single licence
covering all users of the system. At least that's the way it works in
the UK.

CALIFORNIA CODES
PENAL CODE SECTION 653x

653x. (a) Any person who telephones the 911 emergency line with the intent to annoy or harass another person is guilty of a misdemeanor punishable by a fine of not more than one thousand dollars ($1,000), by imprisonment in a county jail for not more than six months, or by both the fine and imprisonment. Nothing in this section shall apply to telephone calls made in good faith.
(b) An intent to annoy or harass is established by proof of repeated calls over a period of time, however short, that are unreasonable under the circumstances.
(c) Upon conviction of a violation of this section, a person also shall be liable for all reasonable costs incurred by any unnecessary emergency response.

I've been hearing transmissions on 460.425 (Countywide) to/from ECHO
and VICTOR. Anyone know which agencies use these designators?

Also does Monroe utilize any of the low band frequencies that they
used prior to the switch to UHF?

I am getting ready to purchase an Icom PCR1000 computer controled receiver. My question are:

I want to order one unblocked.....from Javiation. Has anyone dealt with them with this model and if so what if any are the risks?

How long did it take to get it?

What is the best way to ship to avoid "problems"

Is there any other dealers that are as repitable as Javiation?

Info? Comments? Let me know what you think of yours...I have reads Rich Wells reviews and a couple of others and I am sold on it!

> the radio works fine.

Actually..I would replace C98 anyways. It *is* going to go out
eventually (and usually at a bad time). So you might as well do
it while you have it on the operating table.

You have already done some "preventative maintenance" - go the
extra "mile" and replace the cap. Cheap insurance for a buck!

Replace it with a high-temp (105'), high-frequency rated "HF
series" or "switcher grade" electrolytic (Available from
DigiKey), or use a "conventional" electrolytic - but also place a
0.1uF Ceramic in parallel with the electrolytic.

If you are not using a high-temp capacitor - contrary to
generally accepted practices - mount the cap with some extra
lead-length so that it is not resting directly on the PC board.
Insulate the leads with "spaghetti" and let it "float" about an
inch above the board. The board in that area gets VERY warm -
shortening the life of the cap (which is already under a lot of
electrical strain). Getting it up and off the board will lower
it's operating temperature a bit.

Good Luck.

Cheers,
Paul Grohe

802. Re: Computer Interference Help

Newsgroup: rec.radio.scanner
Date: 1998-10-08 00:00:00 UTC
From: James <jamesgrv@bellsouth.net>
Message-ID: <361C5D8E.185D6D18@bellsouth.net>
Source record: 142006

Joshua,
The first thing you need to do is find the source. You said the hiss gets less? Does that mean that you get the same hiss with the computer off except less loud? If so it may not be the computer making the noise. The noise could be coming in on your power line and the computer is acting as an antenna for it.

Try this. Try tracking the noise down with no antenna connected to the scanner. The noise will, of course, get louder as the scanner gets closer. Once you find it then you can set about curing it.

If you think it is coming from a computer cable or power line you can buy some neat ferrite cores at Radio Shack. They call them RF chokes. They come apart into two pieces, so that you can wind wire around them. They have some general instructions on the package. The basic way that they work is to present a high impedance to RF so it will not pass through the choke. You can trial and error them on the lines coming from your computer. If it helps leave it on, if not try it on another line.

Try one on the power cord going to your scanner too.

Also, they can be used as a balum on your coax. By wrapping a few turns of your coax through one, you can choke off currents on your coax shield. With a mismatched antenna the shield may act as part of the antenna. (and believe me all commercial scanner antennas are mismatched) The balum will choke this off. I think everyone should do this. It hurts nothing and can help a lot. This is a very common practice used on Ham Radio antennas. I swear by these chokes. They can help on any line that is emitting RF.

Also look inside you computer to see if the ground wire is connected to the chassis. They sometimes leave it loose and hanging. It may not help, but it does not hurt to connect it to the chassis.

Does you computer surge protector have an RF filter? It should.

Try plugging your computer into another power socket. Try that with your scanner too.

I hope this helps, RF problems are 20 century witchcraft, I have only given you only a few basic moves that are easy. There is much more that you can try. There is a small paperback book printed by the American Radio Relay League (the amateur radio organization) that deals with the subject. You should check out their web site, they have information there too. Use a search engine to find it. -James

I'm trying to find frequency listings for the Norfolk, Hampton Roads, Virginia Beach, VA areas but am not having much luck. Everyone's web site how has links to pages that might have these frequencies do not exist anymore. What's up? Can anyone give me a working web site with these? Thanks George http://home.ptd.net/~georgef or for a radio forsale listing check out http://homepages.infoseek.com/~radionuts

It is too late to moderate an already unmoderated group. My suggestion
would be to create a mailing list, where off-topic discussion can be
deleted, and problem users can be removed. http://www.onelist.com is a
good place to start a list... all you need is a web browser and you can
set up a list.

I have a BC3000 that I run in the car.

I bought a coiled cigarette lighter power adapter from Radio Shack, with the right plug on it for the radio, and the radio seems to run fine.

Will I hurt the scanner if I run it off the Radio Shack power cord, or do I need a special cord from Uniden, to run it in the car?

Your receiver is suffering from "microphonics". As you go higher in
frequency there is much greater risk of microphonics. I suspect what is
happening is that slight vibrations to the TCXO (oscillator) will result
in noise coming through the speaker. If it gets really bad, like in
your case, the unit will self oscillate.

Here's some ideas on how to fix it. Replace the TCXO.

Or.......you can try padding the TCXO to "de-Q" it mechanically from the
rest of the unit. For example, you can use a piece of weatherstripping
wedged between it and something else solid inside the scanner. In fact,
I've seen production radios that have weatherstripping stuck like this
in them!

Also, you can apply the same weatherstripping to the speaker basket in
such a manner that it will decouple it from the rest of the radio.

This will probably do it!

Cheers1
Andy

interesting thought on the 3-1-1 number.. most of us working in Public Safety and answering 9-1-1 calls now will also be the ones answering 3-1-1 calls if that were ever implemented. What's an emergency? It is different for everybody. Some people do not understand the concept of 9-1-1 being used for true emergencies, i.e.. life or property in danger. In some areas of the country it is also used to reporting noise complaints and other non emergency types of calls for service..It seems we already have a working 3-1-1/9-1-1 number. It has been combined into 1 number 9-1-1. Does it really make a difference?? Not if you are going to be the one answering no matter what line it comes in on.

John:
I have noticed this on all the NG I frequent. Aquarium, Las Vegas,
scanner, DBS, CDR. , beekeeping. It seems the threads that get the biggest
and I mean big are arguments that have nothing to do with the subject and
the self appointed spell checkers. There seems to be a couple of ass holes
in every group that who's job it is is to make the group useless so that
everyone leaves.

It is legal to have any scanner and buy and sell it. The only laws that deal with it are a federal law stating that one may not listen to cordless phones or cellular. Some states have laws that deal with these radios in cars. But most of these laws do not apply to ham radio op. Tec plus and above.

Can anyone cite ONE documented case (other than the Newt Gingrich caper) where someone was charged with or prosecuted for violating a so-called "scanner law." And can anyone cite one documented case where a cellular-capable scanner was confiscated at the border?

I've asked these questions numerous times and have yet to find anyone who could cited a documented case. Lots of speculation, recital of laws, etc., but no documented cases!

Actually, the higher the freq, the more the transmitted signal behaves
like light. Bouncing off metal, but such signals are absorbed by water
in trees which will cut the range if you live in an area of dense
forest.

>

Jeff,

DSC data is transmitted in a modified variant of the SITOR-B mode.
The variation is that it uses a special set of 127 symbols as well as a
10-bit error correction code. Transmissions are (usually) on marine VHF
channel 70, 156.525 NFM.

I do not know of a programme that will decode it, but decoding is not my
interest. No doubt someone on the newsgroup will be able to help there.

Hope this helps.

Best regards,
--
Pat Martindale.

832. Re: Long record time mod.

Newsgroup: rec.radio.scanner

From: grohe@galaxy.nsc.com
Message-ID: <361fbc2f.8290705@139.187.81.1>
Source record: 141886

On Thu, 08 Oct 1998 11:32:20 -0500,
in the newsgroup rec.radio.scanner,
Homer <mslovjoy@inlink.com>
from Springfield P&L thoughtfully posted:

> I need a long play tape recorder, 10 hours or so for late night radio
> programs. I see many cheap recorders modified by someone selling for
> outrageous bucks. Can anyone help me with this mod? Electrical or
> mechanical? Or, can I trick a vcr into recording audio without a video
> signal? Thanks, Howard.

Years ago I used to use a Hi-Fi VCR to record morning radio programs. The built-in timer sure comes in handy! Up to 8 hours (with T-160 tape) of hi-fi audio. Add another deck for another 8 hours. However - I would recommend two decks using high quality T-120 tapes. T-160 tapes are thin and don't hold up too well to everyday use - they would frequently wrap-up when skipping through commercials.

Get a cheap o Hi-Fi VHS deck - new or used (Goodwill is a good place to try) - You don't need 4-heads or anything fancy. Invest in some quality tapes (BASF, 3M, etc).

Some VCR's have to have a video signal, and some do not. Some may record the audio without a video signal - but may "blue screen" mute on playback because there is no video signal.

Early Hi-Fi decks - up until the mid 90's - had a "simulcast" ("SC") setting, where the video comes off the tuner and the audio comes off the audio jacks. This is either a front-panel switch or part of the "source" setting. Some would switch when cables were inserted only in the audio-in jacks.

When I did my taping - I had the video tuned to the cable companies "information" channel - this channel had both the time and date at the bottom of the screen - which came in handy as it "stamped" the tape with the time and date of recording

If you do not have "simulcast" capabilities - you may want to use the video output of a camcorder with the lens cap on (for a black screen). Turn on the day/date display to provide a time/date stamp.

Before the VCR - I used an old 7" reel-to-reel deck running at 1 7/8 ips. With a 3600' tape - I was able to get up to 7 hours per side (capstan speed was a little slow). Not "Hi-Fi", but acceptable audio for talk shows.

Have you considered using your computer's sound card? 4.2GB HD's
are now under 100$ - that should be plenty of room. Use a program
like Chron to launch the sound recorder at the appropriate time.

Cheers,
Paul Grohe

HAMFEST October 25, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 25, 1998

LINDENHURST, LI - NY

On October 25, 1998 the Great South Bay Amateur Radio Club will again
sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and
access-
ories, softeware, books, technical manulas, ARRL information, Amateur
Radio
License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are
$20.00
each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table
reserations.
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space
available.

General admission is $ 6.00. $5.00 with coupon. (Coupons will be
available
at the door.)

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur
Radio license (if licensed), any C.S.C.E. forms that are pending, plus a
photocopy of each, pens, calculator, formal form of ID (preferably photo
ID),
and the examination fee, to the exam seesion. 1998 ARRL/VEC fee is $
6.35,
exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the
Knights
of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Make sure:

1) there is a low current (less than 1 AMP fast blow)
fuse between the cigarette lighter and the scanner.

2) you have the correct polarity.

Other notes:

1) You will be charging the BC3000XLT's battery as long as 12 VDC
is applied to it from the car.

2) If you get alternator whine, you will need a filter on the
power lead.

Barry you and I have a basic difference of opinion about the future of digital communications.
I will not argue with about what you are missing by not using HTML for passing messages through the Internet as you may have a very slow connection or other limited resources. But for those who have a more powerful setup, HTML on the mailing list at 4phun-scanning@onelist.com can't be beat. The messages are informative and FUN.
BTW Barry you down under limey there was a scanner page from Australia just the other day complete with an animated AUS flag.

With regard OutLook Express your post is simply from a position of lacking knowledge about a extremely powerful software product. I am sure that those who know how to use OE are ROTFL at your assertion "Outlook Express is a piece of junk. It is hard to use and has no features." It can do anything that can be done with MSIE 4, which now has over 50 percent of the mindshare of those using browsers on the Internet. And for features OUTLOOK 98 is for those who get many email messages each day. It is comparable to the Anawave Gravity newsreader for USENET but much easier to use after you learn about all of it's features. OUTLOOK 98 is not a USENET reader.

Now you are correct that it is harder to use the most powerful features of OE 4 for sending messages then it is for receiving them. To include sound, animations, and / or speech requires a little VBasic code also in your message.
Pictures and RTF are a no brainier with OE 4. To learn about that and to have fun with other aspects of modern HTML / RTF there is the companion list at 4phun@onelist.com and also there is OutlookFun@onelist.com which has many impressive emails containing rich music and scrolling artwork with the messages. You almost need a SBLive! sound card to truly experience those posts.

To subscribe and see for yourself
http://www.onelist.com/subscribe.cgi/4phun-scanning
http://www.onelist.com/subscribe.cgi/4phun
http://www.onelist.com/subscribe.cgi/OutlookFun

And don't forget there is an old fashioned plain text scanner list for the lowest common denominator at
http://www.onelist.com/subscribe.cgi/Scanning

But if you want to kick back and have some FUN join
http://www.onelist.com/subscribe.cgi/4phun-scanning

(Introduced in the Senate)

S 608 IS

105th CONGRESS

1st Session

S. 608

To authorize the enforcement by State and local governments of certain
Federal Communications Commission regulations regarding use of citizens
band radio equipment.

IN THE SENATE OF THE UNITED STATES

April 17, 1997

Mr. FEINGOLD introduced the following bill; which was read twice and
referred to the Committee on Commerce, Science, and Transportation

A BILL

To authorize the enforcement by State and local governments of certain
Federal Communications Commission regulations regarding use of citizens
band radio equipment.

Be it enacted by the Senate and House of Representatives of the United
States of America in Congress assembled,

SECTION 1. ENFORCEMENT OF REGULATIONS REGARDING
CITIZENS BAND RADIO EQUIPMENT.

Section 302 of the Communications Act of 1934 (47 U.S.C. 302) is
amended by adding at the end the following:

`(f)(1) Except as provided in paragraph (2), a State or local
government may enforce the following regulations of the Commission
under this section:

`(A) A regulation that prohibits a use of citizens band radio
equipment not authorized by the Commission.

`(B) A regulation that prohibits the unauthorized operation of
citizens band radio
equipment on a frequency between 24 MHz and 35 MHz.

`(2) Possession of a station license issued by the Commission pursuant
to section 301 in any radio service for the operation at issue shall
preclude action by a State or local government
under this subsection.

`(3) The Commission shall provide technical guidance to State and local
governments regarding the detection and determination of violations of
the regulations specified in paragraph (1).

`(4)(A) In addition to any other remedy authorized by law, a person
affected by the decision
of a State or local government enforcing a regulation under paragraph
(1) may submit to the Commission an appeal of the decision on the
grounds that the State or local government, as
the case may be, acted outside the authority provided in this subsection.

`(B) A person shall submit an appeal on a decision of a State or
local government to the Commission under this paragraph, if at all,
not later than 30 days after the date on which the
decision by the State or local government becomes final.

`(C) The Commission shall make a determination on an appeal submitted
under subparagraph
(B) not later than 180 days after its submittal.

`(D) If the Commission determines under subparagraph (C) that a State
or local government
has acted outside its authority in enforcing a regulation, the
Commission shall reverse the decision enforcing the regulation.

`(5) The enforcement of a regulation by a State or local government
under paragraph (1) in a particular case shall not preclude the
Commission from enforcing the regulation in that case
concurrently.

`(6) Nothing in this subsection shall be construed to diminish or
otherwise affect the jurisdiction of the Commission under this
section over devices capable of interfering with radio
communications.'.

CALIFORNIA CODES: PENAL CODE SECTION 653t

653t. (a) A person commits a public offense if the person knowingly
and maliciously interrupts, disrupts, impedes, or otherwise

interferes with the transmission of a communication over an amateur or a citizen's band radio frequency, the purpose of which communication is to inform or inquire about an emergency.
(b) For purposes of this section, "emergency" means a condition or circumstance in which an individual is or is reasonably believed by the person transmitting the communication to be in imminent danger of serious bodily injury, in which property is or is reasonably believed by the person transmitting the communication to be in imminent danger of extensive damage or destruction, or in which that injury or destruction has occurred and the person transmitting is attempting to summon assistance.
(c) A violation of subdivision (a) is a misdemeanor punishable by a fine not to exceed one thousand dollars ($1,000), by imprisonment in a county jail not to exceed six months, or by both, unless, as a result of the commission of the offense, serious bodily injury or property loss in excess of ten thousand dollars ($10,000) occurs, in which event the offense is a felony.
(d) Any person who knowingly and maliciously interrupts, disrupts, impedes, or otherwise interferes with the transmission of an emergency communication over a police radio frequency, when the offense results in serious bodily injury or property loss in excess of ten thousand dollars (10,000), is guilty of a felony.

The following link lists the frequencies used by ARCA. It is a very long URL. You will most likely need to cut and paste it into your browser address window.
http://www.radioscanner.com/Frequencies/General_Frequency_Listings/Racing/ARCA_-_Automobile_Racing_Club_/arca_-_automobile_racing_club_.html or you can just go to www.radioscanner.com and go to the "frequency" links.

Hi All,

I uneathed an AOR AR160 at a garage sale, and got it for a steal of $10.00, at least I think it is a steal. To me it looks like it can be programed by the keypad on top, however, I have tried all I can think of to do just that. Any body out there know how to use one, or better yet, could send me a copy via E-Mail or FAX, it would be greatly appreciated. Please answere via E-Mail.

Thanx
Mike

Not only did they have bad solder joints, but they used the componet leads going through the circuit board as the contact path(instead of plated through holes).

I lost power on my 2004 and finally found that the leads on the bridge rectifier circuit had to be soldered on the top and the bottom of the board for reliable contact. I ended up checking several componets associated with the power supply circuit and resoldering the top and bottom of the circuit board to make it work.

Regards,
Minor K7YJ

Aaron-
This Bill seems a little peculiar to me. Firstly, per 47 USC 152(b)(1), the FCC has no intrastate jurisdiction. So, to have them meddling in matters that are intratstate in nature is dangerous. Secondly, due to the nature of the 27 Mhz part of the spectrum, it is subject to skip at both day and night times. Therefore, the FCC may have concurrent jurisdiction anyway. This bill is the proverbial "foot in the door". In my opinion, the FCC should concentrate upon that which it has on its plate and stay out of the internal affairs o fthe 50 states.

>calls if that were ever implemented.

The workload would probably be transparent if your agency has been answering the switchboard for a while, but for those who have separate "operators" to assist the public, if the call has to bounce to you first to see if there's an emergency component, that's a BIG (and probably uncompensated) increase in workload!

>What's an emergency? It is different
>for everybody. Some people do not understand the concept of 9-1-1 being used
>for true emergencies, i.e.. life or property in danger. In some areas of the

>3-1-1/9-1-1 number. It has been combined into 1 number 9-1-1. Does it really
>make a difference??

Well, don't tell that to our professional organizations who are doing the "one number" thing :o) When we began the 9-1-1 business, we wanted EVERYONE to call 9-1-1 for police, fire and ambulance matters. We took the numbers off the vehicles and we put 9-1-1 on. PUBLIC EDUCATION STOPPED THERE! Then we realized, gee... I've only got 4 inbound lines for this and everyone is calling about nonsense; 9-1-1 is clogged! Then the rules were invented to compensate for the prohibitive cost of additional facilities and virtually NO early public education (except handing out stickers that say "Police, Fire, Ambulance - 9-1-1." Heck, we asked and they did.

Here we go again using technology to try to correct a dismal failure in the public education department.

There's no easy answer to not doing your "due dilligence" when it comes to dealing with the public! Sometimes we (public safety communications in general, not anyone specifically) have to go out there and tell people what we expect.

I can imagine the hoakey TV ads: "3-1-1, when it's Bull____, 9-1-1 when it's real" Hey! Let's get Howard Stern to do the PSAs! (If Al "Grandpa Munster" Lewis gets elected Governor of NY, they can do the PSA together!)

Steve

Sean, I wish to personally invite you and anyone who shares your view, which I have quoted below, to join http://www.onelist.com home of thousands of mailing lists.
Once you are verified as a legitimate person you may start your own rec.radio.scanning list or join an existing mailing list sponsored by the folks at onelist.
There are several mailing lists devoted to scanning already located there.
One new scanning list is subscribed to via http://www.onelist.com/subscribe.cgi/Scanning .

There is also a general interest high tech list with a similar name called ---&#65533; 4phun-Scanning .&#65533;---
---&#65533; 4PHUN-Scanning &#65533;--- was started Oct 2, 1998.

There are five moderators who quietly watch that list. These are mature people, two of which are doctors, who can turn off the posting attribute for anyone who is being uncivil.
They are not unsubscribe and can still read messages. After a few days or a week or so to think about it we feel the person should have the right to again join our community as a full member who can post on any suitable subject. Basically they are being sent to the corner for "time out" as one wit put it. One can unsubscribe just as easily as they subscribe to this list. They can also ask the list to hold list email while they are away on trips and unable to deal with it without unsubscribing completely.

---&#65533; 4PHUN-Scanning &#65533;--- is for all types of high tech gadgets from radio scanners to GPS, to the new types of cellular phones and technology. Just about anything a ham radio type geek would be interested in discussing at one time or another. These are the same type of conversations you hear on any active 2 meter repeater in the 144-148 band. ---&#65533; 4PHUN-Scanning &#65533;--- is also unique in that we like, yes encourage the use of HTML format for posting messages. This way we can send pictures, drawings, schematics, tables of frequencies, codes, and much more in our messages. The best software to use with this list is MSIE 4 and the free OUTLOOK EXPRESS email program. OUTLOOK 98 works fine and to a lesser degree users report fairly good results using Netscape for an email program. Netscape can not properly process a number of items but unless you knew what the document was supposed to look like most users would be completely unaware as to what they are missing. MSIE 4's OE and O 98 support advanced active stationary with embedded music and animation, but I am currently the only one who knows how to post with these feature in that list. One can learn more about fancy communications using HTML by subscribing to http://www.onelist.com/subscribe.cgi/4phun or http://www.onelist.com/subscribe.cgi/outlookfun . The latter list has an

active group of mainly females who are graphic artists that enjoy posting their daily creations. You can learn a lot by watching them.

One user is successful using Eudora 4 with ---&#65533; 4PHUN-Scanning &#65533;---

You can even follow the conversations to a degree if the user doesn't use frames or background stationery when they posted the message to ---&#65533; 4PHUN-Scanning &#65533;--- by using the DIGEST FEATURE. Please use our DIGEST FEATURE if you can not process Microsoft compatible HTML email and you would like to be a member of our community. That format strips all attachments and sends you one or more posts daily of a number of messages combined - text only.

Sean Murphy wrote in message <361BAD1E.B5C967F7@jps.net>...
Just how much "off-topic" spam, flame and generic crap-o-la do we all have to suffer here, before we get moderated? These two newsgroups remind me so much of the CB bands in the mid 70's when anyone and their brother were on, blah blah blah, and didn't have a clue. And the only way to get them off the air was to have a coax cutting expedition sent over to the offending parties. Too bad that the technology of the internet brings with it a certain level of anonymity for knuckleheads to spout off about the most mindless blather...

P.S. For those who remain on topic and within the scope of the groups, my apologies for this bandwith. For those who perpetuate the roots of stupidity and continue with the endless threading of garbage and nonsense in this newsgroup, my contempt.

I will speak of this no more.

Mike; Dennis from SCANNIST - seems to me that when freq's disappear or change, the memory cells might be to blame (if there ARE memory cells in this unit). Maybe they're bad, or you had bad ones in there at one time that leaked into the circuitry and corrupted some of the connections? My car's in the shop right now with a bad computer - seems a rain leak got onto the computer's circuit board and gradually caused some weird running problems due to corrosion of various solder points on the board. Good luck
-

874. THIS IS A REPOST, WAS POSTED BY "Your Humble Scribe"

Newsgroup: rec.radio.scanner
Date: 1998-10-09 00:00:00 UTC
From: this1s4you@hotmail.com
Message-ID: <361d7ca9.3375021@news.prodigy.net>
Source record: 141976

IS THIS OLD POST COPIED BELOW ABOUT YOUR PAL AND YOU JOHN MACKEY (sjohnm@bellsouth.net) which was posted by "Your Humble Scibe, scribe@Ennui.dom"?

Behold brothers and sisters, I bring you the profound story of how King Gumby Damnit the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Triangledot, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Gumby was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardians SJohnM trembled when faced with Positive and Negative. Armed with his trusty

screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Gumby maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Gumby with their highest honor, the Diddler of the Spark.

Gumby, hoisted by his own petard, began the journey home. In the land of Triangledot, he was attacked by the Legions of

Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay siege to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, too many fell before the great Gumby. I survived to tell this tale. No one could understand how a single man could withstand such an onslaught as was heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repelled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Gumby surrounded, he was in everybody's kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where, except for SJohnM, he stood alone armed only with a 300 baud modem and a Commodore 64.

Sadly, we were almost all victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaiming him Master of Communication Technology smote almost all of us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses with his trusted stead SJohnM guarding his rear as he had become accustomed to, they began thier journey home.

Upon returning to Triangledot, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Beanie-Babies proclaimed him King and the great sage and visionary Pope Gurk presided over the coronation and everyone was smerpy. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Gumby Damnit the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark,

Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Gumby Damnit the Great Liar.

: In article <6uk0ba$f2n@ssbunews.ih.lucent.com>, parnass@marconi.ih.lucent.com
: blathered on about...
: >
: >If your Wards BC220-clone works ok and has a bright display,
: >I wouldn't replace C98 just yet.

: Check. Everything seems to work OK. Also added some heat-sinks,
: as advised. I did resolder about a dozen of the nastier-looking
: solder joints and left the rest alone. With that and the keypad,
: the radio works fine.

: >Hope you can locate the proper Chromerics keypad to replace
: >the worn pad.

: Yep; ordered a used, tested one from G&G as they didn't have any new
: ones. It was a perfect replacement and worked fine. It was actually
: a "Chromerics" with "Chromerics" logo and stickers; the one I replaced
: was the same design but from "Amp" (Amphenol, I think).

: The trouble with my original keypad was mostly that the melted-over
: plastic studs that hold all the layers together were broken off in
: several places. The owner of the scanner kept it in a dusty location
: and attemped to clean it with a shop air hose, which I think did in
: (delaminated, basically) the keyboard.

: Before I found out they had replacement keypads, I toyed with the idea
: of making my own. I think that some of the tiny square pushbuttons as
: found behind the front panel of VCRs and TVs would work; possibly with
: a bit of filing on the button for height clearance. I made some
: measurements and there seemed to be enough room; the only thing that
: would seem to be problematic is that the buttons I looked at aren't on
: a standard 0.1" pin spacing for use with perfboard. Nothing you
: couldn't fix with solid pc board material and really tiny drill bits.

: After the mechanical part is done, it would be simple to wire up the
: buttons in the same matrix as the original keypad. I would remove
: the flat-cable connector on the processor board and connect the new
: keypad to the processor board with a short piece of ribbon cable.
: Maybe a ribbon cable with DIP plug on one end to facilitate later
: removal. At any rate, I got the "correct" keyboard so I didn't have
: to go this far; just wanted to put this idea out for any comments.

: Thanks very much for the advice! I appreciate it.

: Matt Roberds
: mroberds@worldnet.att.net

: Tulsa, Oklahoma USA

A hint:if enough of the posts are there(and are long enough) a SMALL self-tapping screw can replace the missing portion of the post-I used to rebuild keypads which had the "melted down" portions broken off-so the back would not stay on.

I've been running mine in the car with a radio shack cord like you mention for a while now. Don't do it all the time, just when I am concerned about the battery level. I know alot of scanners will automaticly override the battery if a alternate power sorce is present, the 3000 may do this also.

Adam Brock wrote:

why not get yourself a Voltage Converter

you can find them at radio shack...expensive

or go to http://www.damark.com

they have them for under 50 bucks for
just scanner use....

I have them in my Jeep and they
work great for scanners and tv's
and speakers and u figure it based
on the wattage it handles...they
go up to 500.

bill conduit
etc.

some come with two inputs from
your gizmos

then you hook it up
with a three-way electrical
hook-up that goes into your
cig lighter and you now have
three variations on a theme

what else is there to do?

John, do you remember that deal Cheek offered to you, but you refused to accept unless *he* accepted two of *your* conditions? Remember he would not accept them?

Well, John, it seems that he has NOW indeed tacitly accepted *your* terms as well as his own. So why haven't *you* lived up to your side of that agreement? I suspect that you *never* intended to live up to it anyway, even if (and now since) Cheek has (tacitly) accepted *your* terms.

Most new scanning receivers range in price from the $100 (US) range up to
say $400, and there are some even higher.

See:

http://www.strongsignals.net/htm/new_user.htm

A very informative webiste by Rich Wells.

904. North Atlantic Airspace Radar View and Log

Newsgroup: rec.radio.scanner
Date: 1998-10-10 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981010155811.11290O-100000@alfa.ist.utl.pt>
Source record: 141806

Hello

Another excellent log for the North Atlantic.
In my opinion listening to the North Atlantic is the easiest way
to start an 'airband listening career'.
Strong signals, organized airspace, many flights and easy to
understand communications.
If you take a look at the following .gif file which shows the a
radar view of the North Atlantic airspace created with the log, there is a
very interesting route between Canary Isl and the UK and used by many
charter flights: this route is not a a straight line between these 2
locations but a huge circle around Madrid and some part of Lisbon
controlled airspace. I was wondering why...perhaps to avoid the high taxes
of overflying these airspaces...does anyone have any more suggestions?
The gif file with the radar view is at:

'http://www.geocities.com/SiliconValley/Lakes/9420/shotex10.gif'

Really hope you enjoy the logs.
Note: the flight labels in the radar view contain a small circle
around each aircraft representing the minimum horizontal separation
between flights at the same altitude to avoid mid air collisions.

Best regards, Andre Brandao

FS: Uniden BC3000XLT, $200 shipped

Unit is in excellent+ condition. Comes with 1 used battery
which seems to hold the charge just fine. Sorry I don't have the
charger (the charger is a simple coaxial type as available from Radio
Shack). Price inludes shipping COD (within cont. US).
I bought the BC3000XLT to upgrade from my BC2500XLT but found that I
am happier with the older model.

This radio is identical to the Uniden Bearcat 890XLT. Check the specs under www.uniden.com

Nice features, but very prone to intermod and images. Yours may be modifiable for cellular, based on the mfg. date. Optional CTCSS board helps control the intermod and image problem. Does receive the 225-400 military aviation band. Good buy for $50.

Congratulations. You have just confessed to committing a federal offense, as well as to breaking state law in many areas. I've forwarded your note to www.fbi.gov and www.fcc.gov as I think they may find it very interesting.

910. Blue Angels - Wings Over Houston

Newsgroup: rec.radio.scanner
Date: 1998-10-10 00:00:00 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <6vmqkv$i68$1@news4.wt.net>
Source record: 141836

The Wings Over Houston Airshow is coming up and I am wanting to verify and update my list of Blue Angels frequencies.
This is what I have:

121.900 241.400 319.800
141.560 250.800 384.400
142.000 251.600 391.900
142.025 263.350 395.900
143.000 263.500
143.600 275.350
238.150 305.900

I used these frequencies at the airshow about two years ago and didn't hear a lot of traffic. While the Angels were flying I did hear some communications on the UHF airband. It seemed the leader barked of a word like "Duece!" and that was it. Perhaps he was calling for a certain formation or routine. Any help on what kind of communications traffic I might hear would be great.
Thanks, John

Nope..... What u need to do is ISOLATE those two Bandpass
filters with some diodes so the one doesn't try to "feed back"
to the chip under the goop.

BTW, If U take off the metal covers on the OTHER side of the
board with the gooped-up chip, You will find that the Bandpass
filters are completely gooped up INSIDE the metal boxes in which
they reside!

It all depends on the amount of Money you have to spend... The more money the more features on the receiver. For Instance if there are lots of Trunked Systems in your area you will probably want a trunk tracker. Otherwise its really a matter of taste - I have a trunk tracker and an ICOM R10 love em both. I am currently waiting for my AR8200 which will become my main scanner along with the trunk tracker. I don't use the wideband scanners for SW though. I have a HF Receiver to use for it. I got the R10 and 8200 because of the Number of Channels and Computer Programabity. Also got the R10 because it is one of the smallest handheld scanners on the market.

Sorry Don't know anything about the Super High end base stations like the IC8500 or the AR5000 but those are near 2000 each

916. AOR AR2000 question

Date: 1998-10-10 00:00:00 UTC
From: Hairlip <slurpage@golden.net>
Message-ID: <361F1A4B.9D19F311@golden.net>
Source record: 141842

Most scanners on the market that I know of have a delay button. This gives you the choice of having a 2 second delay if you so choose. Otherwise, the scanner will start scanning immediately when the transmision is complete. My AR2000 has a delay/hold button. The hold button makes the scanner stay on the next chanel that a transmision is received on and won't start to scan until I press scan. Otherwise I have to have the 2 second delay. I want to know if it's possible to make my scanner capable of having "no delay". I have no use for the "hold" setting.

My mail reader does not allow HTML to be seen. So the message would look a
right mess.

Also not everyone on the Internet uses a PC. I for one use an Acorn.

John.

Anyone know where I can find a windows based scanner frequency manager which will list freqs in the order they are entered into a scanner? I've tried a couple of dos based...not enough room for notes, and Saldino's Frequency manager, which doesnt keep them in the order I need.

Thanks in advance for any suggestions!

It is one of the actual ATT branded ones that were made before the name
changed to Lucent. It came out in January, 1995.

From the FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which
covers civil and military air bands only. Good audio.
Large display shows frequency only out to 2 digits. Slow
scanning and odd keystroke sequences. No key press
confirmation beep. Cannot lock out channels from memory
scan. Powered by AA batteries. Battery saver circuit. See
"Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in
Monitoring Times, November 1997.

Maybe a missed a point here, but isn't radio communication possible
across state lines, and therefore inherently regulated at the federal
level? So the FCC has authority to regulate, right? The bill, if passed,
would authorize local jurisdictions to enforce existing federal laws
which address such issues and out of band operation and excessive power
usage.

You are a sick and disgusting person. It's bad enough that you listen to your neighbors conversations, but to tell the whole world about it. Get e life buddy, or at least get a clue. It's MORONS like you that give the government reasons to ban scanners.

Next time, stop and think before you tell everyone that you are breaking the law. I would laugh my a** off if a cop read this and came knocking on your door.

WAKE UP !!!

You could replace and reprogram the microprocessor. But that's the
only option unless you want to employ some sort of external frequency
converter.

In the past it was often possible to unlock various frequency ranges
by snipping a diode or two. But that's because they were designed that
way, before the Feds were really serious about cellular blocking.
Manufacturers built those scanners with a wink and a nod to the
regulators knowing the radios could be easily modified but still meet
the letter of the law. No more. Congress and the FCC have made it very
clear; they are serious about cellular lockout and won't certify
radios that are easily circumvented in this respect.

The Trunktrackers were designed with the cellular range blocked in the
microprocessor code, you can't "reasonably" defeat it.

What most people dom't realize is that you weren't really "modifing" the older scanners for cellular, but rather "unmodifing" them. They were built & designed to get cellular & then blocked. The new scanners aren't built or designed to recieve cellular so there is nothing in there to "unblock" or undo.

954. New Grove catalog

I just received the new Grove Enterprises catalog in the mail the other day, and I'm curious about something I saw on page 19. Specifically, I'm interested in getting feedback on the Optoelectronics Micro Counter for $98.95. Has anyone had any experience using this thing? Does it work? I'm attracted to this unit because of it's size (it's actually in a Motorola-style pager case with belt clip) and the price is pretty reasonable.

Any thoughts, comments, etc., are apprecaited.

Please email all replies directly. Thanks..

>UPS (Although it might have been FedEx).

You should get the callsign from the FCC database for the freq , and then do a search of the callsign, it will reveal a group of freq's most likely if it is trunked, you can then plug all of them into a bank in your scanner to listen to the trunked system. If it is a busy one you would need the trunktracker, but for a very small system you won't.

The ORCO 800 MHz system used to have 3 data channels. Now ther are
4 data channels on the 20 channel trunked radio system. Where does the
additional data channel come from?

Also, what is "metro net"? There used to be just the "north net"
"central net" and "county net". Each "net" had it's own data channel.

I am thinking about suscribing to the Ricochet Wireless Internet service
I am concerned that the Ricochet signals could be intercepted.

here is a snip from the Ricochet webpage:
>

Q: What is Ricochet?

The next generation in
Wireless Communication.

Ricochet provides you with a
wireless connection to the
Internet, giving your laptop
unparalleled freedom. Stay in
touch with the office in your
car, on the subway, in the
airport, in meetings...you'll
never be tied to a phone line.
Connect with the office LAN,
the company Intranet, surf the
web or check your e-mail...on
the run...in seconds at
28.8Kbps, thanks to the
convenience of Ricochet.

Q: How does it work?

21st Century Technology

The Ricochet network uses
hundreds of small sized,
inexpensive transmitter/receivers attached
to utility polls....you're never
more than a half mile from a receiver.
>

For a picture of a Ricochet Transmitter, (they are all over town)
click here: http://www.koast.com/ricochet.html

About the only mod you can do is the Virtual Downconversion mod. There are different ways to do this mod, but one way is at:
http://w5gb.nmsu.edu/kc5kto/mods/pro26cell.html

There was talk on this group that this mod overloads the CPU but I've never had any trouble with any mine, and I have three of them. I did mount a switch on one of them to turn the mod off or on whenever I want. I feel better about it, but I still question whether it was necessary. Better safe than sorry I guess.

Good luck,
Brian

Hi All:

I've been a lurker for years and have enjoyed this group immensely. I don't have a question per se, but I want to bounce something off you all and see what you think.

I live in a rural area and purchased a sportcat 150 over the internet about a year ago. While I like it, It has kind of a wierd search function (non programmable) so I upgraded to a pro-90 being that it was on sale at RS for $200. The three hundred Channels is probably overkill around here but that's okay. Anyway, I have noticed that there is a huge difference in reception. The Trunktracker can't even compare to the SC150. BTW the SC150 even picks up some Cell freqs, (although around here there isn't too much to begin with. Much too boring anyway), while the pro-90 gets Zero cell.

Now for the main thing, I have held both scanners in each hand and had the sportcat pick up stuff that the trunktracker can't get. I'm wondering if the unit is defective. (Although when I go to the nearest large city it seems to work fine.) My Question is why the big difference in reception? I'll tell you this, it has left me wondering why I forked over $200 bucks for a supposedly better unit. Maybe I got a bad antenna or something. Any suggestion? Thoughts?

Thanks,

Shanbo

To Anyone Interested In The New ICOM IC-R2,
I have just posted my review of this new micro-receiver to
my web pages. If you are interested in a look-see, point your
web browser to:

http://www.strongsignals.net/htm/revr2.htm

Happy reading!

Strong Signals,
Rich Wells N2MCA

984. FA: Icom R-9000 relisted on eBay

Newsgroup: rec.radio.scanner
Date: 1998-10-11 00:00:00 UTC
From: Manuel W4SSB <mmaseda@gte.net>
Message-ID: <6vrf7m$ic2$1@news-1.news.gte.net>
Source record: 141604

I've relisted my R-9000 on eBay. This receiver looks and works as new. I just spent $800 having a new case and front panel assembly installed. This will be a 3 day auction. If I don't get my $4000 reserve I will just keep it.

Wow, it's cheap! I wonder if their claim of 28.8 is true, I'll bet
they are fudging that just a bit...still it looks like a deal!

990. FS PRO-26 Price Increase

Newsgroup: rec.radio.scanner
Date: 1998-10-11 00:00:00 UTC
From: bfwinstead <winstead@airmail.net>
Message-ID: <1F272730B67EAFDF.15ED48E002DC3DEC.D8C205F1EC6A9ED5@library-proxy.airnews.net>
Source record: 141610
Cross-posted to: rec.radio.swap,rec.radio.scanner

I sorta regret to announce that the previously listed
flawless PRO-26 for $225 shipped is now $300 shipped to 48.
As I re-researched this rig I was reminded of why I bought
it new in the first place -- 25 to 1300 minus cell, #2 ranked
of ALL handhelds at Rich Wells' www.strongsignals.net and on
and on. If yer a Rockyfeller or somethin' remove UNT to reply.

991. Dallas / Ft. Worth Area Scanning Mailing List

Newsgroup: rec.radio.scanner

The DFW Mailing scanning list has now been actively busy for over 6 months now.....over 150 subscribers today!

Do you live in Dallas and want to correspond with Fellow DFW scanner listeners?

Point your browser to http://www.onelist.com/isregistered.cgi?listname=dfwscan and subscribe today. Its totally free, and probably the best resource for DFW scanner listeners. See you there!

For more information, see http://web2.airmail.net/lblant1/dfw.htm

I presume you had so many offers to buy at $225 that you raised the
price to $300. Give us a break.

___ Blue Wave/QWK v2.12

1010. Why do police use codes

Newsgroup: rec.radio.scanner
Date: 1998-10-11 00:00:00 UTC
From: joe.nicholson@fanciful.org
Message-ID: <908084989@fanciful.org>
Source record: 141744

-=> Quoting Frcarson@mail.idt.net to All <=-

> One reason that codes are used (especially clearance codes) is that
> it is entered into the CAD computer by the dispatcher, and then goes
> to tha mainframe (or server, whichever). The information can then be
> pulled up later and sorted, searched, etc, by a clearance code (which
> is more standard) for statistical purposes.

How do you explain how agencies which
use clear text enters data, since they
have no codes?

A long time ago I had to go into the FCC
office to look up some information
I ask the FCC about montering cordless phones and they told me there
is nothing they can do about it and it is really a stupid law, and they
have NO_way to enforce it also they told me they don,t give a damn
about it

born to be wild (thats my theam)

WANTED: "APF Tools" or "apf40.exe).

APF tools can extract frequencies from almost any text (or other) file and put it into a form usable to load into scanners.

I used to have a copy, but can't find it anymore (it is several years old).

If any of you scannerists have a copy, I would appreciate it.

Doug,
I still have the Pro2005 unit for sale . You are the first email response in my mailbox, so you've got "dibbs" on it. I have three of these 2005 units, so this is an extra one that I'm selling. I think that these aresome of the best units ever made as far as scanners go, and hate to part with the unit, but at least still have two other units to play with. I have had several emails on this unit, so if you want to buy it, drop me a money order and email me so I can tell these other emails that the unit is sold. Thanks, Chuck Ezell

Hi,

I'm a Canadian scanner, I live in Windsor, ON.
I can use it in my car, truck whatever, it's legal, I have the cell blocked, but don't care, i wanna listen to planes and the good stuff, not some private things that I'm not supposed to. We are different, we don't post that we love listening to cordless phones, that's why we don't have strict scanner laws, shame on people who make you guys look like everyone who lives in an apartment have ascanner to listen to their neighbours. I know you don't all do it. We have people like these ********* but we have less, they're growing, we GOT TO STOP that, stop these people because in a couple years no more scanners in the US and in no time no scanners in canada. i'm sorry if ou take this the wrong way, I'm not talking US=bad and canadian = super good .
you know what kind of people i'm talking about, Thanx,

gabe

The Minitor II has a fairly narrow frequency spread in all models.

1. Did you realign the receiver section?

2. Did you make sure the option jumpers were set correctly?

3. The last but most important, did the pager work before the crystal
was swapped?

Just my $0.02 worth.

Last night was very slow for the high tech 4phun-scanning mailing list as it covered only these few subjects.

1. Re: DeLorme, etc.

2. Re: Set up OUTLOOK EXPRESS for Microsoft News

3. Scanning on Onelist

4. HTML vs. Text in e-mail

5. Have Fun and Make Some Money of Off What You Hear

6. Scanning or HTML?

7. Re: Have Fun and Make Some Money of Off What You Hear

8. Tracking collars

9. Re: Scanning on Onelist

10. Want to Buy Scanner

11. Re: [scanning] Tracking collars

You must be HTML compatible with Outlook 98 or Outlook Express 4 or 5 and MSIE 4 or 5 to subscribe. Almost all messages on the 4phun lists are email messages that are HTML formatted. To subscribe go to http://www.onelist.com/subscribe.cgi/4phun-scanning

So far today (Sunday 10/11/98) the topics have touched on a few of the above topics plus

1.. Cellular Phone Band A
2.. Cellular Phone Band B
3.. Secret service
4.. USA Drug enforcement
5.. More nextel 911 woes
6.. GMR and FRS frequencies
7.. Cordless phone frequencies
8.. Build An Inexpensive Computer Control Interface For Your Scanner
9.. The Micro Counter- frequency counter
10.. Do NOT LISTEN to these frequencies!
So if you are into not just scanning but have powerful software and scanners and want to have FUN using them subscribe to our free email list at http://www.onelist.com/subscribe.cgi/4phun-scanning

Source record: 141772

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 obo and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.

1039. Vhf/Uhf Military recption in Virginia?

Newsgroup: rec.radio.scanner
Date: 1998-10-11 00:00:00 UTC
From: Theodore Bittner <tb4jesus@earthlink.net>
Message-ID: <3620F132.57202CA4@earthlink.net>
Source record: 141773

I am currently living in central Virginia about 90 mi. sw of Wash DC
and 65 mi west of Richmond. I have been an SWL for 30+ yrs and have been
interested mostly in HF utility monitoring. Living in western Kansas in
the past I found very little Vhf/Uhf activity there but having moved to
my present location , I would like to try a hand at military and
aviation monitoring.
I realize this is somewhat of a subjective question, but do I have a
chance of hearing enough Uhf/Vhf activity to justify a scanner
purchase? I am limited to indoor or hiden antennas as per covenants and
the like. I am able to pick up some DC and Richmond packet activity
using an attic mounted 2mtr vertical. Would a small attic
omnidirectional vertical work with the scanner or am I probably too far
from andrews etc to pick up any traffic? We do get a fair amount of fly
over from the military and would like monitor if feaseable. With Andrews
to the northeast and the Norfolk to the southeast it seems a shame to
have these goldmines of activity just out of my reach.
Any and all thoughts are most appreciated. Thanks

Ted

I moved this site last week (from AOL) and added a chatroom to it. Sunday night at 8 pm Central Standard Time there will be a scheduled chat for those interested in monitoring Houston, TX area communications. Go to http://members.xoom.com/houstonscan/ and click on "Chat." You will need a JAVA capable browser such as Microsoft Explorer (recommended), AOL or Netscape Navigator. I am not sure if WebTV users will be able to participate. The topic will be open, but I expect to have some discussion on scanning the Wings Over Houston Airshow.

Thanks
John Habbinga

1046. Re: Why do police use codes

Newsgroup: rec.radio.scanner
Date: 1998-10-11 00:00:00 UTC
From: scosgt@worldnet.att.net
Message-ID: <6vr1ua$rni@bgtnsc02.worldnet.att.net>
Source record: 141780

Police ten codes have been in use since long before the "computer age". The main reason is for clarity, especially since radio systems were not always as good as they are today. A signal "10-13" (officer needs help in many jurisdictions) leaves no room for misunderstanding. Giving a code that means an auto accident with injuries again tells the Officer exactly what is happening, and how fast he needs to respond, and what to expect when he gets there.
A call of "auto accident - no injury" could easily be heard as "auto accident - injury" by an Officer with radio static and traffic being what it is. It also tends to be faster - more information can be transmitted in a shorter time - on a busy radio channel.
In addition, many codes are used so that a bystander "probably" could not understand. IOW, instead of saying "that guy you have stopped has an outstanding murder warrant" within the earshot of the perp, the dispatcher says "you have a 10-27 (or whatever)", to protect the Officer until help arrives.

Hello,
I am selling my Uniden BearCat 200xlt handheld 800mhz scanner. This scanner is cellular capable, the kind that are now banned in the US. These scanners are becoming more and more scarce. I am auctioning it on Ebay some come take a look, place a bid. Good Luck, happy scanning.

Ooh, entre CAN$ 120 jusqu'au CAN$ 1400 ou plus, selon les
frequences que ce balayeur peut recevoir, et tout les "extras". Allez
au Radio Shack, ou un autre vendeur des radios pour voir les prix.

A+,

The sounds you are reffering to are handshake channels. They control the fleet channels and so forth in a trunked radio system.

Image response is a different issue. No mod is required to exploit
whatever image response might be "useful". Although the Trunktrackers
are triple conversion designs they are not entirely immune to the
problem, though better than many scanners. Wide frequency range
scanners have wide front ends and image performance is a problem.

Because it is not against the law to publish the frequencies, the
legal issue comes in if that information is used improperly. Heck,
you can go to a library and find out how to make bombs.....but making
one (and using it) is illegal.

Just my $0.02,
howard

Steve,
The ham antenna designs will do well for scanning, though you are
right that the impedance matching is not really an issue for use in
receiving with a scanner. The relevant concern is loss in the
transmission line, you would be well served to spend the extra money
up front for good coaxial cable. If you are building your antenna(s)
design around 'F' connectors so you can easily use 75-ohm cable (this
way you do not need an adapter on the antenna side, though you will
need an F-female to BNC-male adapter to attach to your scanner - most
use a BNC connector), it's loss is similar to RG-8 and is thinner and
easier to work with. For premium cable, use Belden type 9913 or LMR
400, though these are notably thicker and more expensive (about 20 to
25 cents a foot more), they do have half as much loss as the RG-6
75-ohm cable. Keep your cable run as short as possible whichever

cable you use.

Use of ground planes is a function of antenna type, a dipole would not need one whereas a 1/4 wave or similar antenna would. The ground plane, in and of itself, will not damage your radio (cause 'desense'): it may cause you to receive the signal with enough 'stength' to overload the receiver (due to the antenna functioning properly). For instance, I have a Bearcat 890 that is fairly sensitive (receives signals well), but not very selective (cannot differentiate between two or more strong signals close to each other) and is prone to overload; when used with anything more than the stock whip (such as when hooked up to my VHF/UHF ham antenna's) the local pager site (within a mile of my home) comes in on many frequencies outside of the actual transmitted frequency.

For general VHF/UHF scanning, an antenna designed for 144 MHz ham use is a good first project. It can be made with 5 @ 19" pieces of wire, a connector and your transmission line. I do not have an url handy to give you, but you would likely find it described on any of the sites for ham antenna's you have visited. Another good source is the ARRL Antenna Handbook, it is $30 new and will have what you need and a whole lot more (there are also many other publications available, but I am most familiar with the ARRL book mentioned). You might find one at a library, and it does not need to be the newest one either.

Heck, I just realized that my response is getting to be far too long for a newsgroup posting so I will close, you can e-mail me with particular questions, remove the ~~ and # from my address to respond via e-mail.

Howard

The only place I've seen it is on Bill Cheek's FTP page. However,
some idiot (I'm being nice here) got him in trouble. He no longer has
an ISP to offer his files. If you e-mail me I can zip up a copy for
you. Remove NoSpam#Please from my e-mail address to reply.

No, YOU get it straight. Monitoring cordless phone links was MADE illegal,
in a later update to the law that made monitoring cellular phones illegal,
in the USA.

Let's just pass another law, that will solve the problem.

Wireless Privacy Enhancement Act of 1998 (Passed by the House)

105th CONGRESS

2d Session

H. R. 2369

AN ACT

To amend the Communications Act of 1934 to strengthen and clarify
prohibitions on electronic eavesdropping, and for other purposes.

HR 2369 EH

105th CONGRESS

2d Session

H. R. 2369

AN ACT

To amend the Communications Act of 1934 to strengthen and clarify
prohibitions on electronic eavesdropping, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United
States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the `Wireless Privacy Enhancement Act of 1998'.

SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.

(a) PROHIBITION ON MODIFICATION- Section 302(b) of the Communications Act of 1934 (47 U.S.C. 302a(b)) is amended by inserting before the period at the end thereof the following: `, or modify any such device, equipment, or system in any manner that causes such device, equipment, or system to fail to comply with such regulations'.

(b) PROHIBITION ON COMMERCE IN SCANNING RECEIVERS- Section 302(d) of such Act (47 U.S.C. 302a(d)) is amended to read as follows:

`(d) EQUIPMENT AUTHORIZATION REGULATIONS-

`(1) PRIVACY PROTECTIONS REQUIRED- The Commission shall prescribe regulations, and review and revise such regulations as necessary in response to subsequent changes in technology or behavior, denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--

`(A) receiving transmissions in the frequencies that are allocated to the domestic cellular radio telecommunications service or the personal communications service;

`(B) readily being altered to receive transmissions in such frequencies;

`(C) being equipped with decoders that--

`(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service transmissions to analog voice audio; or

`(ii) convert protected paging service transmissions to alphanumeric text; or

`(D) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception.

`(2) PRIVACY PROTECTIONS FOR SHARED FREQUENCIES- The Commission shall, with respect to scanning receivers capable of receiving transmissions in frequencies that are used by commercial mobile services and that are shared by public safety users, examine methods, and may prescribe such regulations as may be necessary, to enhance the privacy of users of such frequencies.

`(3) TAMPERING PREVENTION- In prescribing regulations pursuant
to paragraph
(1), the Commission shall consider defining `capable of readily
being altered' to require
scanning receivers to be manufactured in a manner that
effectively precludes alteration
of equipment features and functions as necessary to prevent
commerce in devices that
may be used unlawfully to intercept or divulge radio
communication.

`(4) WARNING LABELS- In prescribing regulations under paragraph
(1),
the Commission shall consider requiring labels on scanning
receivers
warning of the
prohibitions in Federal law on intentionally intercepting or
divulging radio communications.

`(5) DEFINITIONS- As used in this subsection, the term
`protected' means secured
by an electronic method that is not published or disclosed
except to authorized users,
as further defined by Commission regulation.'.

(c) IMPLEMENTING REGULATIONS- Within 90 days after the date of
enactment of this Act, the Federal Communications Commission
shall prescribe amendments to its regulations
for the purposes of implementing the amendments made by this section.

SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF
COMMUNICATIONS.

Section 705 of the Communications Act of 1934 (47 U.S.C. 605) is
amended--

(1) in the heading of such section, by inserting `interception
or' after `unauthorized';

(2) in the first sentence of subsection (a), by striking
`Except as authorized by chapter
119, title 18, United States Code, no person' and inserting
`No person';

(3) in the second sentence of subsection (a)--

(A) by inserting `intentionally' before `intercept'; and

(B) by striking `and divulge' and inserting `or divulge';

(4) by striking the last sentence of subsection (a) and
inserting the following: `Nothing in
this subsection prohibits an interception or disclosure of
a communication as authorized
by chapter 119 of title 18, United States Code.';

(5) in subsection (e)(1)--

(A) by striking `fined not more than $2,000 or'; and

(B) by inserting `or fined under title 18, United States
Code,'
after `6 months,';
and

(6) in subsection (e)(3), by striking `any violation' and
inserting `any receipt,
interception, divulgence, publication, or utilization of any
communication in violation';

(7) in subsection (e)(4), by striking `any other activity
prohibited by subsection (a)' and
inserting `any receipt, interception, divulgence, publication,
or utilization of any
communication in violation of subsection (a)'; and

(8) by adding at the end of subsection (e) the following new
paragraph:

`(7) Notwithstanding any other investigative or enforcement activities
of any other Federal
agency, the Commission shall investigate alleged violations of this
section and may proceed to
initiate action under section 503 of this Act to impose forfeiture
penalties with respect to such
violation upon conclusion of the Commission's investigation.'.

Passed the House of Representatives March 5, 1998.

VHF low band was open again today into south Texas. The spanish station on 30.22 sounds like a taxi service with a bored dispatcher.

Also monitored:

31.140 'need a supervisor on the bus...'

30.160 taxis in spanish

30.620 female in spanish

30.580 business with northeast us accents

31.200 business

30.920 spanish, not mexican, taxis

30.820 ditto

30.620 ditto

33.140 spanish

>on other women.

Why, we KNOW that it simply can't be true! Cops are above mortal
limitations, and must be TRUSTED - that's why it's insulting to expect
THEM to submit to fulltime audiovideo surveillance while in uniform,
just like bank employees and supermarket checkout clerks.

Source record: 141636
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just got a new battery pack for my BC100XLT, and I'm now looking for the mod to extend the battery life. I've seen the mod before, opened the scanner, and pulled off the top board in an attempt to do it, but the specific location wasn't clear to me, and the dam components on the board are so tiny, I decided to just put it back together till I got a microscope or something to get me in the right place. Now ready to try again.
Anyone got the mod ? or have actually done it, any pointers if so ?

TIA
KM

Congratulations. You purchased a scanner that was specifically designed to prevent modification to receive cellular frequencies, as well as to prevent the reception of most cellular images. Enjoy your new scanner. ;-)

I think the 'scanner' laws in New Zealand state that anyone can listen, but cannot profit or divulge to a third party anything they hear on their scanners. That is the way I use my scanners anyway.
A good site to visit would be :

http://homepages.ihug.co.nz/~mainland/

frequency info, equipment info, etc.

NZ Ham radio operators site is at :

http://www.nzart.org.nz/

1098. For Sale: BC 890XLT Scanner

Newsgroup: rec.radio.scanner
Date: 1998-10-12 00:00:00 UTC
From: BCreasey@juno.com
Message-ID: <35c928f5.6117387@news>
Source record: 141644

Would you like to know more about what is happening in
your local community? Buy this Bearcat BC 890XLT
auto scanner and you will be able to hear all of the action.

For those of you not familiar with this base/mobile
scanner, it has the following features:

1. Turbo Scan - Scan and searches up to 100 channels
per second.
2. VFO Control - Turn the variable frequency oscillator
tuner to select the desired frequency or channel.
3. 200 Channels - You can program up to 200 frequencies.
4. 10 Banks - Each bank contains 20 channels.
5. 29 - 956 MHz - Frequency range that can be searched
(not totally continuous from 29 - 956 MHz, receives some cell
transmissions).
6. 10 Priority Channels - You can assign one priority
channel from each of the 10 banks.
7. Weather Alert - Lets your scanner function as a severe
weather warning radio.
8. Auto Store - Automatically stores all active
frequencies within the specified bank(s).
9. Auto Sorting - Programmed frequencies are
automatically sorted within each bank for faster
scanning.
10. Auto Recording - You can record from the scanner
onto a tape recorder.

The scanner includes the power supply, original
telescoping antenna, and operating manual.

If interested, e-mail me at BCreasey@JUNO.COM

1104. looking for programming instructions for motorola sp-10 radio

Newsgroup: rec.radio.scanner
Date: 1998-10-12 00:00:00 UTC
From: Ron Ling <rling@cad3.uccb.ns.ca>
Message-ID: <3621FA20.472D@cad3.uccb.ns.ca>
Source record: 141650

Help...

I've just purchased 2 motorola radios.

first radio is motorola P-10 fixed to 154.600 and seems to be
transmitting fine to second radio.

second radio is motorola SP-10 which has 2 sets of dip switches inside,
which are under the battery. This radio seems to be transmitting but
does not break the squelch on the first radio.

I've checked both radios on a freq counter and they are both
transmitting on 154.600 mhz.

I just hoping this is just a minor adjustment with the dip switches
inside the sp-10.

If someone can help me, it would be greatly appreciated,
Thanks in advance ,
Ron

It sounds to me like you have a broken connection just under the top of the case where the wire goes from the BNC to the mainboard.
Near a large city and strong signals the unit will still more or less work because the signals saturate the inside of the case and it is snesitive enough to work with that little bit. The Trunktracker is bad about this IMHO. The cse can flex slight with pressure on the antenna which eventually leads to this break.

It is some what easy to fix, pull apart the unit and resolder the lead if not under warranty. If it is the make Radio Shack fix it.
When you look at the connection it may look ok. You may have to push at it with a probe to discover the break.
You may learn all about this and more bypassing USENET and the crap found here if you are HTML capable with Outlook Express.

Shanbo wrote in message ...
Hi All:

I've been a lurker for years and have enjoyed this group immensely. I don't have a question per se, but I want to bounce something off you all and see what you think.

I live in a rural area and purchased a sportcat 150 over the internet about a year ago. While I like it, It has kind of a wierd search function (non programmable) so I upgraded to a pro-90 being that it was on sale at RS for $200. The three hundred Channels is probably overkill around here but that's okay. Anyway, I have noticed that there is a huge difference in reception. The Trunktracker can't even compare to the SC150. BTW the SC150 even picks up some Cell freqs, (although around here there isn't too much to begin with. Much too boring anyway), while the pro-90 gets Zero cell.

Now for the main thing, I have held both scanners in each hand and had the sportcat pick up stuff that the trunktracker can't get. I'm wondering if the unit is defective. (Although when I go to the nearest large city it seems to work fine.) My Question is why the big difference in reception? I'll tell you this, it has left me wondering why I forked over $200 bucks for a supposedly better unit. Maybe I got a bad antenna or something. Any suggestion? Thoughts?

Thanks,

Shanbo

>ILLEGAL TO DISCUSS WHAT YOU HEAR ON THEM!!!! READ MORE CAREFULLY!

You are wrong. According to the ECPA, it is illegal to monitor any conversation over any type of radiotelephone. That includes cordless, cellular, mobile, etc.

It has been illegal for decades to disclose what you've heard on any transmission that is not designed for broadcast to the general public. I think that law is from 1934, while the ECPA is from 1986, recently amended.

From: reckman@WPI.EDU
Message-ID: <6vsvs5gqq1@bigboote.WPI.EDU>
Source record: 141660

or is the user broken...

I just purchased a BCT-12 from Uniden. I have a couple of questions about its operation, from someone with experience.

First, has anyone used it in Massachusetts? For some reason, the Priority Alert doesn't seem to be triggered here by the State Police. I've driven by troopers out of their cars helping motorists, I've been in toll lanes next to a trooper, and I was at Logan airport in Boston on Friday night where about 10 troopers were directing traffic. In none of these locations did I get a single hit on the Priority Alert.

I can get the radio audio ok, in Highway Patrol and Local modes.

To anticipate some questions, I've tried both antennas, I've fiddled with the squelch, and yes, the alert is turned on.

Also, I can't seem to tune into the NOAA weather stations? When I put it in WX mode, I get a display of W2 or W3, but no audio. I assume that the W# is telling me which NOAA frequency its locked on to, but no sound.

So, is it me, or my new toy?

Thanks in advance,
Rob

Source record: 141663

I realize that opinions are like noses, everybody has one. I have typically owned the "State of the Art" type scanners over the last 20 years and I can say without reservation that the Q-7A is one of the most amazing scanners ever to come of the assembly line. My personal experience is based on continual travel using it in both high transmitter density areas as well as rural areas. While it did take me a couple of days to master the programming technique (as there is no keyboard for this) once you get the hang of it it is quite logical and "fast". While you are limited to 2 scan banks of 100 channels each, you also have 20 "search" banks or ranges if you will. For me this is ideal traveling across the country all the time and not needing a lot of preset channels. I use Bank 0 for my local police and fire and other interesting stuff, and then use Bank 1 for phone stuff. My search banks are set for typical band plans of Police, Fire, Air, Business etc. The sensitivity in my opinion is the only one I have played with to equal the Yupiteru. Scan speed is a bit slow but not a real problem. I live the light that goes on when the channel is found, and the audio is virtually the best I have ever heard for intelligibility. My battery life is nothing short of a marvel as it goes for at least 2 weeks used at least an hour or two per day. The construction quality is military spec so this little thing is a brick. Bottom line, for 2 hundred bucks, I feel this is by far and away the best scanner for performance out there. If you absolutely need more scan banks, my second choice without reservation is the Relm HS-200 for about the same price. I got mine next day air from Scanners Unlimited (650)-573-1624. Glen can tell you all you want to know. Good Luck.

well. There it is. Anyone who knows of any mods for the Radio Shack
Pro-30 please tell me.
Thanks.

Hey if plan on knocking the pro-30 consider that I paid $7.50 for it!

Has anyone successfully registered POC32 (v2.05)? I have contacted every possible e.mail address regarding this program (obtained from the web site) in an attempt to pay for and receive a serial number, and have received no replies whatsoever. If you have registered the program, I would greatly appreciate the correct e.mail address.

In case some one doesn,t know that may be interested in listenning
to police scanners and aircraft on the net, I found a site about a year
ago. If your pc has a sound card you can listen in on police scanners
around the country, like Dallas-Ft.Worth, LAPD, etc. Also at the site
you can listen in on the Dallas-Ft. Worth air-traffic control tower.
Just go to www.policescanner.com
Just in case someone didn't know .

I found these NFL-related freqs in my files. I've been collecting this stuff
for quite a while, but I can't vouch for any of it.

463.4625 DPL Repeater San Diego Charger, QB headset
468.4625 DPL Input

464.4625 Repeater New England Patriots, QB headset
469.9375 DPL Input

461.6125 DPL Repeater Dallas Cowboys, QB headset
466.6125 DPL Input

461.3625 DPL Repeater Denver Broncos, QB headset

NFL Referee Wireless Mikes
174.400 Atlanta, Dallas
175.000 New Orleans
180.600 Chicago
183.000 Kansas City
184.000 Pittsburgh, Washington
184.400 Minneapolis, Seattle
185.400 San Francisco, Cleveland, Miami
187.800 San Diego
194.000 Indianapolis
195.800 Buffalo, Denver

Freqs used by NFL throughout the US.

463.2375
468.2375
457.5325
461.2375
461.3125
461.3375
461.4625
461.5375
461.6875
461.7875
461.8215
461.8375
461.8625

Motorola Spirit, Sport, and SP10 Frequency and "PL" DIP Switches

SP10, Spirit, and Sport Radios have a set of "DIP" switches to select the radio operation frequency. The switches are located under the battery on the right hand side. Frequency selection switches are in a single bank of 4, and can set to either "on" or "off". Radios with the optional "PL" board (sometimes called, CTCSS, "interference eliminator", coded squelch, or privacy board) have a second set of switches also located under the battery. "PL" selection switches are in a single bank of 8.

Fellow scanner enthusiast. Alot of people have been loosing money or not reciving what they paid their hard earn cash for, when dishonest people post junk for sale or don't have the product at all and just take your cash

and run, when you send it to them. Lets help each other out!!!!!!! I will for
no fee drive within a 30 mile radius of my area of WICHITA FALLS TX. to check out any scanner for you before you send your hard earned cash.
If everyone would do something simular to this the CONS WILL RUN from this great newsgroup.Lets start a data base for people who are willing to do the same as i am doing. Togeather we can cover the whole country!!!!!

Source record: 141678

Radio Shack does have the Pro 26 on closeout for $137.99. The close out does not mean anything when there aren't any left. I had the regional and district offices scan inventory in the total United States for this scanner. We turned up many stores that showed inventory levels of the Pro 26. I called each of the stores and their inventory levels were off or the inventory level was for a scanner that was in for repairs. To find a Pro 26 in new condition is a rarity. I picked mine up through fierce bidding on ebay. I found a guy that received it as a gift, opened it and played for a short time and repacked it and stored it in the closet. It was and is still in pristine condition. He did not enjoy scanning as a hobby. I managed to get it for $215.00 and wouldn't part with it for less than $300.00. With it's comparable features, you won't find a better scanner for less.

my 2 cents worth.....

1136. Re: Image of 46.20 at 453.7125 ?

Newsgroup: rec.radio.scanner
Date: 1998-10-12 00:00:00 UTC
From: KB9KEB@webtv.net
Message-ID: <23968-3622278F-20@newsd-152.iap.bryant.webtv.net>
Source record: 141682

The Bearcat IF frequency is usually 10.8 Mhz. An image would appear at + or - twice the IF frequency or, in this case 21.6 Mhz away from the actual transmit frequency. Say your local PD is on 453.150. Add 453.150 + 21.6 and the image would be on 474.750 Mhz. We use this a lot around here on older Radio Shack scanners (which use a 10.7 IF, BTW) as the scanners had an internal birdy on 453.150 that did not show up on the image.

As far as an image in a different band, I've never heard of that. You are probably receiving a relay transmitter of some sort, perhaps a link to a remote base.

Hope this helps.

Well, it sounds to me like you're a subversive. I'll send your postings to the US Secret Service so they will at least keep an eye on you. You have publicly and freely admitted to violating the nation's law against snooping on other people's telephone conversations and now you are advocating the overthrow of the government. You sound like someone who should be watched--very carefully!

I have found that rec* usually has about twice as many postings as the
alt* group. But, I have also found rec* to contain much more off
topic posting and other related crap, but that seems to be getting a
little bit better . . . . .

Lee,

I agree with you that for $200.00, it is a nice radio, however, it is NOT a scanner, but an amateur transceiver that could double as a scanner, albeit missing many of the basic scanner conveniences we've come to know and love.

The audio is outstanding for a radio this size, and it fits in your shirt pocket.

The ICOM R-2 which will be released soon, is the "Scanner" version of the Q-7A with PL Tone capabilities...

See Rich Well's Strong Signals page for a review of BOTH radios.

No. Had it passed, HR2369 would have banned scanners capable of decoding digital cellphone and PCS communications. Scanners capable of decoding digital public safety communications (if they are ever invented) would not have been affected.

>does not break the squelch on the first radio.

These radios have an option for something called PL tones, most likely
one of the radios is set to only break the squelch if it receives the
correct tone...and the other radio is not sending the correct tone.
The dip switches probably control the tones sent...I would experiment
with them!

The reason I asked was that one of my fellow workers is an EMT with a local volunteer fire department. The local guys are still using 154.37 but police and fire in the cities in on 800 Mhz trunked (Motorola). The state (Indiana) police are moving towards a plan that would put all government
radios on a single trunked system statewide. It would free up the VHF and UHF frequencies plus give all agencies statewide access.

He said that he had heard of the system but that they were waiting for digital radios, and that all radios were going to be SecureNet (encrypted). My reaction was that the media would be pissed, it would be expensive, and not everyone would need encrypted communications. Plus if everything was encrypted, little boys would revert to being little boys. Most of my objection was to the encryption which would be easier if the radios were digital.

Brian et al.,

I have found that while listening to the downconverted cell frequencies, battery usage is incredibly high! I am going to have to go to rechargables or an external power supply to circumvent this problem. Other than that, the conversion allows pretty good reception of the cell frequencies. PS. Thanks for the tip on the epoxy removal! I got brave and broke out the Dremel tool to get down to the pins!

Come on guys. There are so many different models, and frequency ranges, that this guy's work radios could be in any band. Could be 50, 150, 450, 800, 900Mhz. His question is so general, that it's difficult to answer. It would be best to get a GOOD description of the radio, along with a model number. It would make identification ALOT easier.

Dan

Just bought the above mentioned scanner, and I have already misplaced the users manual. How do you program in "trunked" frequencies? Whenever I hit the trunk button, I get a read out of 1,2,3,4....10... but then it wont accept any frequencies. Would someone be so kind as to provide me with this programming info? I am trying to listen to Culver City PD and they use 484.xxxx, can you use the trunk feature on frequencies below 800MHz.

"Victor Healey" <fourphun @ bellsouth.net> wrote:

:Barry you and I have a basic difference of opinion about the future of
:digital communications.
:I will not argue with about what you are missing by not using HTML for
:passing messages through the Internet as you may have a very slow connection
:or other limited resources. But for those who have a more powerful setup,
:HTML on the mailing list at 4phun-scanning@onelist.com can't be beat. The
:messages are informative and FUN.
:BTW Barry you down under limey there was a scanner page from Australia just
:the other day complete with an animated AUS flag.

You are quite right. A person who runs a mailing list is quite at liberty
to determine what they allow and encourage, especially when they make it
clear in their advertising. Anybody who does not approve who does not
own the required equipment can go elsewhere. I do not think, though,
that html should be encouraged in usenet or when emailing to someone
who has not indicated that they welcome html encodeing.

:With regard OutLook Express your post is simply from a position of lacking
:knowledge about a extremely powerful software product. I am sure that those
:who know how to use OE are ROTFL at your assertion "Outlook Express is a
:piece of junk. It is hard to use and has no features."

You could be right. When I installed IE4 on my computer it included
Outlook Express. Having grown used to the power and simplicity of
Free Agent I was unimpressed with the complexity and lack of conveniance
of OE. I promptly deleted it. Perhaps it has too many unneeded features
which result in it being complex and lacking in the important features.

:It can do anything
:that can be done with MSIE 4, which now has over 50 percent of the mindshare
:of those using browsers on the Internet. And for features OUTLOOK 98 is for
:those who get many email messages each day. It is comparable to the Anawave
:Gravity newsreader for USENET but much easier to use after you learn about
:all of it's features. OUTLOOK 98 is not a USENET reader.

It tries to be, but fails.

:Now you are correct that it is harder to use the most powerful features of
:OE 4 for sending messages then it is for receiving them. To include sound,
:animations, and / or speech requires a little VBasic code also in your
:message.
:Pictures and RTF are a no brainier with OE 4. To learn about that and to
:have fun with other aspects of modern HTML / RTF there is the companion list

:at 4phun@onelist.com and also there is OutlookFun@onelist.com which has
:many impressive emails containing rich music and scrolling artwork with the
:messages. You almost need a SBLive! sound card to truly experience those
:posts.

I have a humble 486/66 with a Sound Blaster compatable sound card and a
28.8K modem. Will that do?

:73 de ki4je fourphun<at>bellsouth.net

10-4 good buddy. Why the morse code referances?

::---&#65533; 4PHUN-Scanning &#65533;---

You made no comment on why the list name includes dashes and graphics.
Doing so makes the list name look odd and will result in the name
looking quite differant on differant computers which have non IBM
high bit character sets.

Barry

Is there anything we can do to stop this idiot from posting
his ad here everyday?

How about complaining to his ISP ?

Or hit him where it hurts most, his wallet, like posting the
schematic of his descrambler for all to see?

Tandy's support page should have the manual online. I can't remember
the address, it's something like www.tandy.com/support. If you type pro
2050 into Yahoo's search engine, it should come up to the right page.
Also, the 2050 and its handheld counterpart, the Pro 90, cannot trunk
below 800 mHz. I also live in the L.A. area, and the only Public Safety
trunked system that I know of that the Trunk Tracker is able to listen
to is the UCLA system. All other trunked PS systems in L.A., like the
county system, are Erikson, and are not able to be tracked by the 90 or
the 2050. Culver city isn't trunked though, so just select the channel
you want, type in the freq, and hit enter.

Hello folks.

Would be very appreciative if someone could suggest an INDOOR antenna for my Bearcat BC350A Scanner. I'm looking for something that can really optimize the reception in a very urban area. Alas, I'm in an apartment so something that might work best inside would be appropriate.

I believe the connector is of the BNC type and I'd be doubly appreciative of sourcing a web-based mail order source for any recommendations provided.

Thanks kindly in advance.

-John

P.S. The e-mail address is heavily fubared -- please respond in the newsgroups.

He asked a *simple* question which someone who also owns a PRO-2050 can probably answer quickly via private E-mail. What's wrong with that? Why does he need to purchase a manual from Grove as you sarcastically suggest?

I get tired of reading posts in this group from people who are too "high and mighty" to be bothered by a simple question. If you think the question isn't worthy of an answer, then DON'T RESPOND. It's responses like yours that stop people from exchanging useful information here.

Pat, done bickering for now

It'd help if the flames were based on valid information. Grove got hauled before Congress last year and shredded by clowns making sound bites and kissing the CTIA's (cellular lobbying organization) ass. I don't know if it is true or not but Grove claims he repeatedly asked for clarification on the laws regarding doing mods or publishing instructions for mods, and never got any response -- until Congress got involved. Then the FCC told him that doing the mods and publishing the mods were illegal.

1179. FS: Icom R-100 Receiver/Scanner

Newsgroup: rec.radio.scanner
Date: 1998-10-13 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <7009neiii1@eve.enteract.com>
Source record: 141552
Cross-posted to: rec.radio.scanner,rec.video.satellite.misc

Hi! I have an Icom R-100 mobile scanner/receiver for sale; some specs:

100 kHz - 1856 MHz *continuous*, 800 MHz unblocked
AM, FM, WFM
100 Memories
20 Scan Edge Memories
AFC
Auto Noise Limiter
Keyboard Entry

Dimensions: 5.9 (W), 2.0 (H), 7.1 (D), 3.1 lb

The radio works perfectly, and is a cosmetic 6-7/10 (just the normal wear for a mobile radio). It includes the manual, mounting bracket, power cord, and factory box.

$400, and I'll meet you somewhere in the Arlington Heights/Woodridge, IL area for delivery, or buyer pays shipping. No trades, please.

Please drop me a note if interested.

73,

Paul WD8DKY
paul.knight@prairiecomm.com

Radioshack also sells them....I'd also be willing to bet they would
let you look at one if you really wanted......for that matter I bet if
you were to tell the drone that it was missing that they would either
RSU one right to your house...or give you one on the spot..just a
thought...

What a crybaby! Why don't you get the service manual and figure it out
for yourself?...Or are you incapable of something this simple? Does
someone have to hold your hand for every little thing you do? How
pathetic you are!!!!!!! Especially since you have this fine receiver
and all you can think about are stupid ass cellphone calls!!! HAHAHAH

Actually if it was set up correctly it could help with reception in a mobile situation or for monitoring direct to mobile units. It could eliminate the "picket fencing" sound commonly heard when using a scanner mobile. I doubt that the antennas would become directional. I know that some dual CB antennas are designed to be directional, but they have to be set up the way the directions say in order to perform like advertised. I see a lot of rednecks with their dual antennas that are not set up correctly and I just have to chuckle. There might be a minor problem with impedance mismatch with the dual cable, but it really shouldn't be a big deal. If you are worried about that then use 75 ohm cable instead of 50 ohm cable and it should match up pretty closely. I use wireless microphones that have dual antennas on the receiver. The purpose is to reduce the number of "dead spots." You will just have to experiment to see what the best set up is. Give it a try and let us know how it works.

1192. Re: FS PRO-26 Price Increase

Newsgroup: rec.radio.scanner
Date: 1998-10-13 00:00:00 UTC
From: HP Authorized Customer <joe@user.com>
Message-ID: <6vvo3p$i29$1@fnord.systemsoft.com>
Source record: 141565

It might help to understand how Radio Shack actually reduces
the prices. I haven't been with them for a number of years, but
the way it USED to work was when an item was discontinued,
it stayed at full price unless the company declared a closeout.
But the closeout STILL referenced the original price, and while
technically it went back to the original price, in practice it didn't.
The real magic starts when ONE of the distribution warehouses
runs out of the item. When that happens, then the item went
into a periodic markdown process, including cost to the store
from the warehouse for any remaining units in a warehouse.

Units that are 'in repair' may in fact just be units on a shelf
in the back room. It usually means that the manager or
'good' employee wanted the unit, and they're just letting it
sit there till it's really devalued, and then the 'missing knob'
will suddenly appear and the unit will be sold dirt cheap.
A VERY common practice.

Hey, I could use any PRO 30 mods too; just fixed mine AGAIN...I think I've had it forever - it withstood being hit by a car at about 40 MPH. Different things go on it here and there, but I just pull it apart and fix whatever it is and put it back together.

1201. POC32 v2.05 Help Needed

Newsgroup: rec.radio.scanner
Date: 1998-10-13 00:00:00 UTC
From: Rick Kempe <rekempe@hotcoco.infi.net>
Message-ID: <01bdf641$31a8dfe0$52bd65ce@ibm>
Source record: 141711

I've been having trouble getting POC32 to decode paging frequencies. I've connected the input of my computer's soundcard to the 455khz discriminator output of my AR3000A, and I'm getting the software's indication of a valid signal (DCD icon flashes as does the L and R level indicators) but no decoding. The documentation's in German. Anyone have any experience with this program that can help me out?

If I'm not mistaken the 455khz output is different from the baseband
audio output..at least on my scanners. You've got to tap that one. If
you plug it into the lineout or speaker out and mess with the levels
you should decode most 512 & some 1200 baud pages..assuming they even
still have them in your area..but the baseband is where it's at..and
after you get tired of that lame soundcard based decoding system,

that's the fact Jack

say Jack

check your e-mail

i got one....and an
old bearcat 100...cased too...

both cased...manuals too

and old bcat 100...wow.
charger circuit won't charge

so i put nicads in...just
got tired of carrying around
25 nicad AA cells in camera bag

bill conduit
california

etc.

1212. Help programing BC-101....THANKS

Newsgroup: rec.radio.scanner

Greetings everyone, we have some news to share with you!!

We have a new home!! We are now located at http://www.batlabs.com
Please update your bookmarks.

Additionally, after 36 hours of work, we have a bunch of updates to
share as well. These include:

-Added the cloning cable pinout, cloning instructions, and 99 channel
scan programming info to the HT600/MT1000/P200 page

-Added Pac/RT and Type I to Type II/IIi trunking conversion infor to
the Maxtrac page

-Updated the model chart and added channel expansion info and the
power connector pinout to the MCX1000 page

-Re-scanned the MTSX model chart

-Added B5 to C7 conversion info the the Spectra page

-Added info on adding conventional personalities to trunking STX's

-Added some out of band info for 5-tone GP300's

-Added the R.I.C.K. schematic

-Added some info on the mic connector for the Maxar 50 and the power
connector for the Moxy

-Added a PROM conversion chart for the Syntrx

-Corrected an error on the pager RIB schematic

-Added the pinout and schematic of the PL board for the SP10

-Added the programming cable pinout for the MTR-2000 repeater

-Added some info on adding channels to an SM50

-Added another possible dongle pinout for TK

-Added a link to get MoSlo for slowing your machine down

-Made a correction to the Spectra 900 programming cable

-Updated the WANTED page.

SO, come visit the premier Motorola 2-way information page at our new
home on the internet. There is no one else who compares (actually,

there is no one else, period :)).

Thanks,

Bat Wing

Heres some interesting Adelaide AUSTRALIA frequencies:

473.975 Some taxi chat channel. Same regular users.

486.200 Used by security firm checking car dealers yards.

464.925 MYER CENTRE management Adelaide

131.600 Police air-ground

486.475 Transit police/Transadelaide supervisors

486.400 Chubb security

463.450 Royal Adelaide Hospital security

487.925 " " " " porters type staff

473.800 Adelaide Impressions Chaueffered Cars

473.650 Channel 7 .....not much though

489.500 Channel 9 " " "

154.575 Coast Guard

146.850 Amateur Repeater

147.000 " " " "

126.325 air - ground.......adel-kingscote

129.500 qantas air-ground

130.650 ansett " "

473.150 Adelaide Airport Operations

486.500 SA FM.......funny

411.750/412.100 St John Ambulance cadets local communications. Used
at sport events, Royal Show etc etc etc

418.100 AN Train Control....north to Pt Pirie etc

418.475 " " "

418.675 " " "

488.925/483.725 Suburban Taxi Voice base/car

484.550 Qantas operations Adelaide (local simplex)

463.600 Ansett operations Adelaide (repeater)

464.950 Qantas International (repeater)

134.500 Adelaide Airport ATIS.....weather, runway use etc

473.550 West Lakes Mall (repeater)

469.700 Westfield Kilkenny/Marion

485.600 Parking Inspectors Adelaide

463.575
464.225 Charles Sturt Council

487.325/488.850 Main RAA voice channels

1219. My SA scanning site - TOTALLY REDONE

> site) to a central location.

Agreed. Example: Washington, Pa., City fire department uses UHF HT's at 458.8125 MHz, which are picked up by its trucks and rebroadcast on the dispatch/command frequency, 46.440 MHz. That way, firefighters inside a burning structure don't have to worry about trying to hit the tower X miles away, only the truck just outside the door.

I believe Washington firefighters can also switch PL tones and use the UHF frequency as an operations/fireground channel to avoid cluttering up the dispatch channel.

Since I think 46.200 is also a public safety/fire frequency, it might be the same situation in your area.

Subject: Cell Mod for BC8500 XLT

From: Steve Donnell <sdonnell@nh.ultranet.com>

Bill Inabnett wrote:

>

> Would sincerely appreciate info on cell mod and other mods for BC8500 XLT

> scanner.

>

> Please Email : bill@unicomp.net

Hi, the BC-8500 is fairly easy to modify for Cellular. We first wrote this up two years ago in National Scanning. Basically, what you want to do, is to swap the logic control lines that drive transistors Q4 and Q5 on the receiver PC board. This can be done with a DPDT switch. Transistor Q4 controls activation of the 800 MHz band signal input filter. Q5 activates the 350 - 500 MHz band signal filter. By doing this logic line swap around, when you set the '8500 to search between 371.19 and 396.80 MHz, you are actually receiving signals from the 869.04 to 894.97 MHz(Cellular). This occurs because the radio uses the same range of Local Oscillator freqs to receive the 870 Mhz(blocked freqs) area as is used for 370 MHz reception(freqs the radioo can be programmed for). In the case of the BC8500, you also need to do an additional control line swap, to that of the control lines that drive transistors Q41 and Q42. These set the operating mode of the radio. In the 370 MHz range, the default(and only) operating mode the radio can be set for is AM. For Cellular reception you need to have Narrow FM mode activated. This is done by swapping the logic line that drives Q42(AM mode) to alternately activate Q41(for NFM mode).Again, this can easily be done with a DPDT

switch. This additional feature can also be used to permit AM/NFM mode switching for other types of reception as well. In most other scanners,like the BC9000, operating mode can be user controlled from the keypad.

One further step is the be sure and set your tuning/search frequency step rate to 5 KHz for acurate on-channel tuning.

Before starting this modification, I highly recomend obtaining a copy of the BC8500 service manual to serve as a guide. If you'd rather not attempt this work yourself, try contacting Cellular Security Group at 508-281-8892 .

There are a couple of other things you can do with the BC8500 that we documented in the former RCMA Journal. These mods include: improved preamp ICs, better Tape Out audio, and adding heat sinks to the voltage regs.(one on the far right and another near the front of the main PCB)

Have fun.

I use an indoor Comet Dual Band 2 meter/450 MHz antenna on my scanner when listening to LAPD and Sheriffs' 450-550 MHz. The 2 Meter part of the Antenna gets all of the 150 Mhz Frequencies perfectly, including all the Ham Radio Repeaters/simplex's. I use the "el cheapo" centerloaded Rat Shack telescoping antenna for frequencies below 100 MHz

Ther's a program called "Recall" which allows you to take your external speaker jack and connect it to the input of your sound card on your computer.
Set it for 8,000 Hz Mono and ADCM Compression, and you can monitor stuff for at least 12 hours using only about 4 Gigs. It's Vox activated and you end up with a bunch of mini .wav files. You first go through internet Explorer and delete everything under 100Kb, Then start looking from the largest size file down to the smallest. The large files will be pursuits, SWAT team, and suicide attempts. The small files are usually just junk. Trash 'em and your Hard Drive is ready for another night's work.

sounds like it's checking the priority channel (every 2 seconds or so)
i think you'd have to use "hold" on the channel you want to override
the priority checking (i think)

i think if you hold the "lockout" (delete?) button down for
2 (or is it 5 seconds) you will hear a "beep beep". this is
the procedure to release all locked out channels.

if this don't work - maybe find a operator's manual . . .

Try the Motorola "dot" frequencies. Often times these VHF or UHF radios
have a colored dot sticker on the bottom. The color of this dot refers
to the frequency of the radio. If there is no dot, try all of them.

This taken from the Frequently Asked Frequencies file:

scanner.faf
/pub/hamradio/docs/misc
ftp://oak.oakland.edu

Dot Frequencies

Dot color Other
Red 151.625 itinerant "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 GMRS Red Star 467.900
Black 462.625 GMRS Blue Star 467.925
Orange 462.675 GMRS
Brown 464.500 itinerant
Yellow 464.550 itinerant

"Dot" stickers are used by the manufacturer or distributer to
indicate the frequency of otherwise identical transceivers. They
are often found in rental inventories and on construction sites.
Additional itinerant frequencies include 27.49, 35.04, 43.04,
151.505, 158.400, 469.500 and 469.550 MHz.

There, now you have a REAL answer.. :)

Calm down dude. Try less caffine in your diet.
I did it for a while when it WAS legal. I must live in a boaring section
of the state because I just couldn`t get into it. Too boaring.
--
Happy Scanning,
Charlie

I didn`t do it.
Nobody saw me do it.
You can`t prove anything!

> Can someone give me (or tell me where to go to obtain) a list of KCMO
> trunking frequencies?

Here's what i've got on my web page:

"Kansas City Ericsson EDACS Analog Used by police and fire,
simulcast system. Frequencies: 856-860.2125, 856-860.2625,
856-860.4375, 856-860.4625, 856-860.7375"

There is a Motorola system used by the Metropolitan Ambulence Service
Trust but I do not know what the frequencies are.

Hello I am selling my Uniden BearCat 200xlt scanner at auction on Ebay. The high bid is currently $107.50. So the next bid of $110.00 would take it home if the auction ended right now. This scanner is cellular capable. But remember it is illegal to intercept cellular transmisions in the US. What you do with it is your bussiness. So come place a bid on it if you are interested. Thanks,

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=35102039

I was there on Saturday. 307.7 and 345.9 were the only two frequencies that lit up during the show that day. They may have been been using the 275.35 for pre/post show staging. The battery in my BC3000xlt was running a little low so I didn't turn it on until about 5 minutes before the show.

The 860 receives images nicely from 895 to 9--something. I'm not aware of a
mod,
short of buying a downconverter.

To remove the L/O on a channel:

press Manual,
type the channel number,
press Manual again to change to that channel,
press the Lockout key to toggle the L/O

After 2 attempts on eBay I'm offering my R-9000 for direct sale. It looks absolutely like new. Radio is 5 years old but has just had a new case and front panel assembly installed (costs $800). Includes original box and operators manual in Japanese and factory supplied copy in English. It also has a new UT-36 voice synth. Price is $4000 and I will pay for FedEx 2nd day air shipment to any U.S. address or for $4150 I will include a brand new Icom SP-20 speaker.

Source record: 141522

Ed I bet you are more confused
now then when you first asked this
question huh? The best way to find out
the freqs is to take the radio to your local
2 way radio shop and have it read.
I this is not feasible get the model number
off the back of the radio you will only
need the first three digits. The third digit
will tell you the frequency band at least
from there you will know what you are dealing
with. (CONVETIONAL OR TRUNKED)
A 3 is 150 or vhf
A 4 is 450 or uhf
And a 5 is 800
If these radios are of any age you can forget
about the 900 band. If not that number
would be a 7. Remember this will only get
you the band you will still have to find the exact
frequency by scannig or trial and error. If they are trunked you will
have to have
a scanner capable of trunking. I don't know if one exist's.
I hope this helps and does not cloud the picture
even more.

I was under the impression that antennas mounted next to each other
like this would be directional at certain freqs depending on the space
between them and the lengths of the antennas, just like the truckers
cb deal..except we deal across a very range...so who knows, I'm
certainly no antenna guru...thats for sure!

We had a statewide conference last week of Sheriff's Deputies from all over the state here in Central Florida..

It appears Monroe County is still using 150MHZ for all their government communications. However the state level is operating on a digital 800mhz radio system.

Try searching the 150-160 band... youll probably find it chuck full of activity, especially the marine radio service 156-158.

Message-ID: <01bdf716$1a8c85c0$545102d1@johngors>
Source record: 141572

I recently purchased a used MVT-7100 that works fine with the AC adaptor, but not with batteries. The low battery indicator flashes within a few seconds when NiCads are used. The unit appears to charge NiCads OK. The NiCads are good and measure about 1.35V each (open circuit) after the low battery indicator comes on. Symptoms are similar when fresh alkalines are installed.

On a whim, I removed the memory backup capacitor and reassembled the unit. Same symptoms.

Does anyone have a clue?
Does an English service manual exist?

Thanks,
John

I recently experimented by adding addition length to the top vertical whip on my Diamond D130J Discone antenna. I attached a Radio Shack stainless steel whip for CB band ($9.95) and wound it together with the existing whip using copper wire. There is about 4" of overlap on the connection. I then weather-proofed the connection. This added about 2-1/2 feet of extra length to the top element that is already base-loaded. Works great all the way down to the CB band and REALLY helps during periods of low band skip. Anybody else experimented with low band mods for the discone?

Frank

I've checked out the Motorola sp10's they use at the local HS, and then
looked on Motorola's website - from what I see, they're available in
v-lo,v-hi, & uhf, so it could be anything.

I have the non-PC version and Iove it!!!!
300 channels.
Excellent RX on it.
Also has great search features like Police, Air, Fire, Marine, FM radio, VHF TV, UHF TV and more.
After I got this one, I rarely use any of my other ones.
To put it simply...IT KICKS ASS!!!
Got mine from Scanners Unlimited out in California. They have a great website too.

I will argue with anyone, that the HS-200 Relm that can be purchased for 200 bucks is the best scanner under the Yupiteru 7100 or above. Anything under 200 bucks is a real compromise, but if you can afford this price range, don't hesitate, just get one. They are a no-brainer to use and have great audio and sensitivity without intermod problems.

1295. Antenna compromise ques.

Newsgroup: rec.radio.scanner
Date: 1998-10-15 00:00:00 UTC
From: Theodore Bittner <tb4jesus@earthlink.net>
Message-ID: <3626703E.E8B38522@earthlink.net>
Source record: 141342

I have a multiband vertical antenna I would like to use with my scanner
to hopefully improve reception. My problem is that I'm restricted
(covenants & restrictions) to an indoor antenna. The antenna has a
height of 7.5 ft and I only have 6'10" vertical clearence in my attic.
As a compromise, would I be better off cutting 6" off each end of the
longest element and mounting the ant. vertically or should I try to
mount the antenna horozontally.
I realise neither soultion is optimal, but any gain over the whip
antenna would be a step up. Thanks in advance for any thoughts.
Tnx -Ted-

Message-ID: <36278b4e.3208245@news.erols.com>
Source record: 141348

FS or Trade: Voice Logging recorders

I have some Racal Wordsafe VHS voice logging recorders for sale or trade.

These are recorders used by 911 centers, DoD ATC and other applications for recording Radio and/or Telephone. These units record 32 channels on 2 T160 VHS tapes for 48+ hours (24+ hours per tape with automatic change over). The dimensions are 19" wide, 8.75" high.

The recorders on playback can automatically fast forward or reverse to the next message, play it and then go on to the next messages. Microprocessor controlled with many features. I can e-mail additional info if interested.

I have 2 rackmount recorders and 1 desktop version (and a 4th for spares).

All units are in extremely clean and have shipping boxes. These recorders originally sold for about $25K new. These were trade-in's that we took back and I can only get rid of them for hobbyist use (i.e. SWL, Scanning or Ham).

So if are looking for a professional way to record multiple radios this is it. They also work great as an audio multiplex unit as you can listen live to any combination of channels.

I am interested in trading for high quality radio equipment (commercial or mil-spec radio's, Ham equipment (looking for a 50 Mhz and 144 Mhz Amp of 400+ watts), wideband V/UHF receivers). Or possibly cash of $1000-$1500 each.

1312. trunk freq info

Newsgroup: rec.radio.scanner
Date: 1998-10-15 00:00:00 UTC
From: jamoran@mail.goodnet.com
Message-ID: <22cV1.1$Xo2.8122@news.goodnet.com>
Source record: 141432

i noticed that ther are two different groupings of trunked frequencies

the first is 856-860 example 856-2375, 857-2375, 858.2375, 859.2375, 860.2375

I recently started programing an AOR-7000 scanner

I have entered the following xxx = 856-->860

.1125, .2375, .2875, .2625, .3125, .3875., .4125.,.4375., .5125. .5375.,.5875,.6125,. 6375. 6875. .7125, .7375, .7875, .8125, .8375, .8625 .8875, 9125, .9875

In addition, I have used the same scheme for the 866, 867, and 868 mhz frequencies

example 866.6375, 867.6375, 868.6375

I travel between Phoenix (Central Arizona) and the Southern and Central California (Los Angeles, Riverside, San Bernardino, Imperial counties as well as the counties near the SF bay)

using the above scheme, I am covered wherever I am. i just have to be sure to lock out the data channels for wherever I am.

If you really want a VERY GOOD antenna for 800 MHz and don't mind a little work, then you will be happy to know that plans for a discone antenna tuned for the 800 MHz range was published in the July 1996 edition of the Electronics Now magazine. You will even be happier to know that the same or similar article is on the internet at http://www.northcountryradio.com/discone.htm. This should give you everything that you need to get it completed. I had to make do with some items which I feel improved the design. I found the heavy sheet of copper at a "Hobby Lobby". It was intended for other hobby needs. This will pull in some distant freqs. This does improve reception in quite a few other bands also.

Source record: 141435

I just Installed the new EL panel, and it was not a problem at all. It seems
to me that it would be easy to splice in a small switch mounted in the rear
or on the side, Has any one ever done this successfully? It would help save
some Life of the EL to completely turn off the light during the day time.
Welcome any responses to this topic.

Thanks

Dave

Source record: 141442

CTCSS - Continuous Tone Coded Squelch System

Basically works as follows:
Radio emits a subaudible tone (cannot be heard by humans) as it transmits on the selected frequency. In the example he cited, it would be 114.8 Hz. If the receiving system employs the CTCSS system as well, and is tuned to the same tone, the transmission is heard. If the tones do not match, no transmission is heard.

You are probably wondering why you can hear your local FD/PD even though they use a PL or CTCSS system. This is because you are not using the system on your end. Basically, the system allows you to select what transmissions are heard and eliminates interference.

Ed there was published a photocopy of how to decode a Motorola serial number which would enable you to learn more then you would ever want to know about that radio on the private mailing list 4phun-scanning@onelist.com the other day.
May I suggest if you have suitable software that you subscribe and send your question there.
Then ask someone to privately email you that photocopy.
If you have powerful software and want to have fun with your scanner then you
belong on 4phun-scanning.

You must be HTML compatible with Outlook 98 or Outlook Express 4 or 5 and MSIE 4 or 5 to subscribe. Almost all messages on the 4phun lists are email messages that are HTML formatted. To subscribe go to
http://www.onelist.com/subscribe.cgi/4phun-scanning

Cross-posted to: rec.radio.amateur.swap,rec.radio.swap,rec.radio.shortwave,rec.radio.scanner

For Sale: Yaesu FRG-9600 multi-mode scanning communications receiver.
Receives 60-905 Mhz continuous
100 memory channels in 10 banks of 10
All mode - AMN, AMW, FMN, FMW, USB, SSB, CW
Can be computer controlled
Clock, timer
Triple conversion
Signal strength meter
Search, priority
Attenuator, tone control
Dial or keypad tuning
Base or mobile operation (mounting bracket, DC cable not included)

This receiver is ideal for those wanting to explore all signals between 60-905 Mhz. It will receive amateur radio (all modes), military (all non-digital), public service, business, FM broadcasts, TV broadcasts, etc. There is even an optional board (this radio does not have it) which will allow you to connect a monitor to it and view TV signals! In particular, this receiver should be of interest to amateur radio operators working satellite and DX. Radio is in mint condition and includes the whip antenna, AC adapter and manual.

This radio originally sold for $550 to $600 with dealers selling it used for around $400 currently. Price is $375 firm, I pay your choice of UPS or USPS shipping. Payment by postal money order only, no trades, US sales only. Please Email if interested. Thanks...

Tom, N0YGT

Hey, I've had the same antenna problems and joint problems that you have had with your Uniden BC 70XLT. If you take a look at my post in "alt.radio.scanner." you'll see I had just about the same comments.

1336. Opinions on scanner for Mot Type II system?

Newsgroup: rec.radio.scanner
Date: 1998-10-15 00:00:00 UTC
From: John Burch <occupant@syix.com>
Message-ID: <01bdf83f$3d0afbc0$e048abcd@default>
Source record: 141456
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Anyone with suggestions as to which trunking
scanner works the best on a Motorola Type II
system? Or more importantly, which scanners
on the market DON'T work well?

Opinions are OK, experiences are preferable.

Thanks

Where I work currently (as a communications dispatcher for an amusement park) and where I have worked previous (undercover loss prevention agent) we always used codes. One main reason, is to limit what the public knows. For example: if someone with a scanner is monitoring a frequency and does not know what the codes stand for, then they know as much info as they did before they turned their scanner on. Another example: If you are standing next to a law enforcement officer and they are speaking in code over the radio, you will not know who or what they are talking about. Of course, alot of the codes are published and there for the taking. In those cases, it is plain and simple. Codes are a way of being short, sweet, and to the point while on the radio. Trust me, every second of "busy" airtime, can mean life or death. Then again, there are numerous other reasons why codes are used, but I think you get the point.

There are only six scanners on the market that will track the Moto trunked systems. They are the Uniden 235XLT handheld and 895XLT base; and the RadioShack Pro-90 and Pro-91 handhelds, the Pro-2050 base model, and the Pro-2066 mobile.
The Uniden 235XLT and RS Pro-90 are clones. They are identical except for the name painted on the front. The Pro-91 is a stripped down version. The Pro-2050 is a stripped down version of the Uniden 895XLT, and the Pro-2066 mobile is in a class by itself, as Uniden is not marketing a mobile TrunkTracker.

1344. MAKE YOUR OWN ANTENNA

Newsgroup: rec.radio.scanner

Source record: 141464

Lately, we have been hearing a lot of inquiries about how to make your own antenna. Maybe you live in a neighborhood that has regulations about antennas, maybe you don`t have the hard - earned cash to plunk down for a "fancy" antenna, or maybe you just like to experiment. Whatever the reason, I hope this file helps. I am not going to get technical on you, so just hang in there. We will keep the tech jargon to a minimum.

The first thing we would consider in this project is just where we are going to put the antenna. A rule of thumb is "as high and in the clear as possible". This makes the attic a preferred location. As the antenna gets lower, we will get weaker reception, and we will tend to pick up more noise from inside the house. But if all you are running is a "rubber duck" antenna, you will still see substantial improvement.

By the way, this info doesn`t really apply to structures that have a metal "skin". The grounded metal "hide" on these dwellings blocks out radio signals anyway, so you have to use an outdoor antenna on those.

Once the location in the dwelling has been chosen, we need to figure out just what frequency band we are going to listen to. If we are interested in the police and fire bands in the 155 - MHZ area, then the antenna will be a lot different than other frequency bands. The standard formula for this is:

468 / frequency (in MHZ)

468 / 155 MHZ = 3.02 feet

This gives us the length of a half-wave antenna in the frequency band of interest, in feet and fr4actions of a foot. The reason that a half-wave was chosen for the design is, that half - wave antennas don`t generally require radials. Rounding off, I come up with about 3.02 feet. We can convert the fractional part this way:

12 x .02 = .24 inch (about a quarter inch)

Next, we have to consider how long the coax is going to be. We are going to add the length of the antenna to this measurement, plus a few feet for "fudge factor". If the coax is going to be more than 10 feet or so, then use good quality coax. Belden 9913 works very well indeed. Don`t forget to get one connector for the radio end, you can use a regular PL 259 and an adapter to convert to BNC. These can be had at just about any Radio shack store.

Once you have everything together, route the coax to where you are going to create the antenna. Now, strip off the outer hide of the coax for the specified length of the antenna, in this case, 3 feet for normal folks, and 3 feet, one - quarter inch for nit - pickers. Take a small pair of

scissors and clip the shield braid all the way around, even with the cut - off hide. The braid is like "chinese fingers". Just push it together in the middle and it will slip right off. Strip the plastic or foam insulation off the center wire in the coax. You now have your antenna made. Now, find a place to attach it, vertically, of course, to a convenient stud or upright structural member. Do NOT attach it to the rafters at a 45 - degree angle, as reception will be much poorer. I use electric fence insulators for this. They just tap into the stud, with a nail, and you just trap the wire in them before nailing them home.

Now, route the coax to where the scanner is going to be. You still have a little bit of work to do. If the scanner is a base unit, then look it over to see if there is a screw that is in contact with the metal chassis of the radio. If so, then cut a piece of wire about three feet long, and run it under the head of that screw. Tighten the screw again. Look for a nearby electrical outlet, and put the other end of the wire under the screw that holds the plastic face plate on the outlet.

Hand - held or no screw to put the wire under on the rig ? In this case, you will have to strip off about 1/2 inch of the outer hide of the coax, without cutting through the braid. Do this as close to the radio as possible. Strip off about 6 inches of the insulation from the ground wire, and give it a few turns around the bare shield wire of the coax. Tape up with plastic electrical tape, to keep things neat and keep things from tarnishing up. Connect the other end of the ground wire to the outlet as described above.

It is very important to do this last step. this is where most home - made indoor antenna installations go wrong. If you don`t do this step, then the scanner will lock onto every "birdie", electrical noise, and appliance in your home. This step even applies to outdoor antennas. You see, the shield braid on the coax is designed to keep noise OUT OF YOUR ANTENNA SYSTEM. But the shield braid doesn`t really "shield" anything unless you CONNECT IT TO GROUND. Besides, Not doing this step really "detunes" the antenna severely, since the WHOLE CENTER CONDUCTOR BECOMES AN ANTENNA if you don`t ground the braid. This will undo all our careful antenna length calculations !

Done ? Sit back and enjoy the increased range and clarity of your scanner. And it really didn`t run into "big bucks", either. Next time, I will get into modifying this system for multiband use.

1345. New: MDT Monitor Program for Windows

Newsgroup: rec.radio.scanner
Date: 1998-10-15 00:00:00 UTC
From: edwarg@geocities.com
Message-ID: <7056s5$4is$1@nnrp1.dejanews.com>
Source record: 141465

I'm writing a Windows program which allows you to monitor MDT traffic on systems that use Motorola's MDC-4800 protocol by plugging the discriminator output of your scanner into the
microphone input of your soundcard.

When trying the program out keep in mind I've only been working on it for a couple of weeks so it may not work perfectly for everyone.

Features so far...

- Uses the sound card to acquire the data to decode, doesn't require the use of a data slicer. Just plug the discriminator output of your scanner into the microphone input of your sound card and away you go. - An "MDT" window displays received MDT traffic the same way it appears on the terminal to which it was sent. - A "Terminals" window lists all of the terminals to which data has been sent since the program was started. You can select a terminal from this list to see the last 10 messages sent to that terminal. - Traffic of selected types (dispatches, MDT to MDT messages, etc.) is displayed in a "Messages" window for easy reviewing. - The raw ASCII MDT data which the program is interpreting can be viewed in a separate window and also captured to disk.

All of my development so far has been from monitoring only one public safety system so some things may not work quite the same for you (MDT to MDT messages may be in a different format on your system, so they may not display in the Messages window for example). If this is the case please let me know.

Note: If you run the program and have the discriminator output of your scanner plugged into the microphone input of your sound card and don't see anything happening try clicking on the "Reverse Polarity" menu item in the Actions menu. You might have to do this whether or not you have to reverse the polarity when using mdtw1234. This will vary from PC to PC when monitoring the same system, I'm not sure why though.

The program (and source code) are available at:

http://www.geocities.com/SiliconValley/Bridge/4681/MDTMonitor

Please send comments/suggestions to me at edwarg@geocities.com.

Enjoy,
Gordon

I have a 10 hours on it XL70 for sale

or is it xlt or is it 70 XLt?

will look later.

this has the battery or two.
the charger dc cord

the case to keep it in

a manual

40 bucks.

again...i no use it much. Never had time
to bring it out of my Press Coat...could
not find it most of the time...so
small. almost ....

good little radio...

and it has an antennae....oh jes...

40 bucks. from California.

bill

for 20 bucks more I'll throw in
a BearCat 100 with a charger cord.
but the unit does not take a charge.
you have to use nicads.

but if you know how to reconnect that
circuit...hey, it's a steal.

I think i have the case it came in also.

The 100 works just fine...but you use
4 AA nicads...goes about five hours.

bill conduit
etc.

SouthCenter has a 2 watt rptr on 462.1125 that has (or had 3 mos ago)
all the primary ops (security and maint) on it. I dunno if it's actually
2 watts because you can hear it in the south end of Kent...As for Seatac
Mall...They were on those Debartolo freqs awhile back...464.775 and
464.9125. The Supermallahs a ton of freqs listed but all I've heard on
them is janitors speaking spanish. The security vehicle they have there
has a VHF antenna on it, but the security office only has UHF radios in
there. TIP- try going to the security office to report something to
llost and found. You may notice something I didn't.

: Brett

All the Debartolo malls (Alderwood, Northgate, Sea-Tac) are definitely
still on 464.775. All 3 are on repeaters with autopatch & reverse
autopatch. Alderwood & Sea-Tac run tone PL and Northgate runs DPL.

Source record: 141475

CTCSS is a tone squelch. If it's in use, during transmissions, a low level AUDIO tone, between (usually) 67 Hertz and 260 Hertz, is sent, along with the other audio. It's filtered out, in the commercial radios, so the users don't hear it. You may hear it, if it's at a high enough level (CHP here in California is famous for this) as a low humming.

The use is simply that receivers using CTCSS don't 'open squelch' and listen, unless they hear the tone they're set to look for.

The 114.8 frequency is in HERTZ. As in, audio tone. That would, as MegaHertz, be in the aircraft band.

If you don't have PL/CTCSS, it just means you will hear ALL transmissions on frequency, if it's shared with several users.

About the only HANDY thing about CTCSS is on Federal freqs, using digital scrambling. Normally, NON-scrambled transmissions will have CTCSS, and scrambled don't, so if you've got CTCSS squelch working, you can listen to the unscrambled coms, without having to listen to the hissing of scrambled coms all the time.

1364. AirNav - Aircraft Database completely renewed

Newsgroup: rec.radio.scanner
Date: 1998-10-16 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981016234155.7138M-100000@alfa.ist.utl.pt>
Source record: 141283

Hello

Just to inform that AirNav (Aircraft Tracking Software) has a
completely updated aircraft database.
After years of monitoring aero-comms on HF, visiting several web
sites, using the All Heard Database included in AirNav, consulting several
books on the subject, we were able to update as best as possible a ever
changing registration/selcal/aircraft type database.
The database can be downloaded by going to the program homepage at
'http://www.fly.to/airnav' and follow the data files link. Anyway it is
already available with the program .zip file also downloadable in AirNav
homepage.
The new database as aprox 10000 records including military and biz
jets equiped with Selcal and is very accurate.
Hope this information is of your interest.

Best regards, Andre Brandao

Here in the store the other day we sold a Relm Hs-200 scanner. The
customer opened the box and said "hey there's an HS-100 in this HS-200 box".
Upon closer inspection the radio had the backplate of a 200 & the front face of
an hs-100. The radio was brand new, and we got it this way from the
distributor. So we loaded the floor model's batt. pack into the scanner to
see what it was. Sure enough it's a 200, PL, 800mHZ, DPL and all. (It must
have been built on a monday over in the orient). We were going to send it
back for an exchange, but if anyone is interested in a Brand new HS-200 w/a
100 faceplate, in the box w/ still factory sealed accessories & instr book,
We will let it go for $140 delivered lower 48. Call & let us know before Sat.
10/24. open 10-6 PM tues-fri, 10-2 sat. (eastern) closed sun & mon.

I've had one for a while and really like it. I particularly like the feature that lets you program an alpha name assigned to a frequency. However, you may be better off considering the new Uniden trunk tracker model. I think that has a computer control port which the 9000 lacks. Also, since the 9000 has been on the market for a while, you may want to check with Uniden to see if a replacement is planned soon. Hope this helps.

DHL0913,

How is the audio on your 9000?
I find that it sucks big time.
My Pro 2035 blows it away in loudness.
Is my 9000 messed up or does the audio really suck?

1372. Help/ Maxon SL-500, what is this

Judging from my e-mail (if not the calendar) the Holidays must be approaching!

With the dozen or more e-mails specific to T-Shirt swapping that arrive each day, I have gotten to the point where I simply cannot afford T-Shirt trading. I hope you understand.

However...

******You can easily purchase LAFD logo items******

LAFD T-Shirts, collector's edition Patches and a wide variety of other Fire Service memorabilia is available for public purchase through the Los Angeles Firemen's Relief Association Store. All store proceeds are donated to the Widows, Orphans and Disabled Firemen's Fund of this non-profit benevolent organization. You are welcome to contact the store directly:

Dalmatian's Firehouse
2900 West Temple Street, Suite B
Los Angeles, CA 90026 USA

Telephone: (800) 244-3439 xt 278 -or-
(213) 380-2900 xt 278

Fax: (213) 380-1028

Hours are M-Thur from 0700 - 1600 Pacific Time
Fri from 0700 - 1430

They are closed Weekends and Holidays.

The store has an on-line catalog that is accessible through the LAFRA website at:

http://www.lafra.org

Click on "Dalmatian's Firehouse".

Stay Safe!

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

PS: If you forget to write down this info (or if you'd like to get info about other FD T-Shirts that are *way* cooler than ours) you can do a

keyword search of the newsgroup archives at:

For sale: Optoelectronics MiniCounter with telescoping whip antenna and rubber duck antenna. $125 (shipping included)

Specifications:
Freq. Range 1MHz - 2.8GHz
Timebase: frequency: 10MHz
initial accuracy: 1 PPM
Display 10 Digit .175" character height liquid crystal
Size 3.7" high x 2.75" wide x 1.2" deep
Weight 7.5 oz.
Cabinet Stamped aluminum, black textured powder coat finish
Battery Internal 4 cell AA, 600 mAHour, shrink wrapped pack,
flying leads terminated with two conductor female plug
Battery discharge time: 4-5 hours from a full charge. 10-12 hours recharge time from supplied plug adapter.

Please email me if interested.

Thanks,
Dan

>Where can I get some Los Angeles area frequencies?

Your best bet is to purchase a local frequency directory such as the Special SoCal Edition of POLICE CALL (not to be confused with the National Editions sold at many Radio Shack stores). You will find specialized frequency directories at many radio hobby and electronic supply stores.

In the meanwhile, I welcome you to monitor the Los Angeles Fire Department. Our official frequency list can be found on-line at:

DUH!

If you transmit your private conversations unencrypted for the world
to hear, then don't blame the ones listening in. People just have to
realise they are exposing themselves, instead of whining for more
restrictions. Use a landline, a digital cellular or a digital
cordless. If you choose not to, dont complain.

If it's in the air, it's up for grabs.

I was reading a cable television trade publication, Multichannel News,
and I come across an advertisement that descibes how cable systems
can utilize unused channel capacity to offer PCS services.

What are the frequencies used by this system?
Can these signals be intercepted?

The antenna you saw is a ruggedized 160 MHz antenna specially made for heavy duty applications such as RR, aircraft, taxis, buses, public safety, etc. It produces a non-directional, vertically polarized pattern. It is equivalent to a 1/4 wave whip, app. 15" vertical wire. You may also find an antenna resembling a paper towel roll on a short mast. Same idea.

The best RR antenna for mobile is a base-loaded VHF Hi-band antenna cut to 161 MHz, and mounted in the center of the roof. Any commercial two way shop has them and they are available from many sources on the Internet. They are commonly called a 3dB gain, 5/8 wave, or 1/2 wave antenna.the base coil will be enclosed and about 1 to 3 inches tall, with a whip of 3 feet or so.

You may want to look at some stuff on my home page about low band
elements for discone. Some details about how to add RS low band
element to an older type RS discone that doesn't have one. I had tried
a CB whip and it didn't work very well.

Is it really necessary to do this? If a battery powered handheld is
floating electrically, won't it just be seeing a differential voltage
at the connector? Wouldn't coupled noise be common mode?

It would depend on the cable company as to what frequencies are used.
PCS is digital. Its very difficult to intercept.

Thanks for the addition. He is right. Only get a CTCSS board if you want
to eliminate some signals. It won't bring in signals you weren't getting
without it.

However, I wouldn't say you wasted your money.

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I just mail ordered an Icom IC-Q7A from CT Morgan in Chattanooga, TN for $200.This new version comes with ni-cad batteries and charger. Also, RT Systems (www.rtsars.com) has developed cloning software for the Q7A. It should be available soon. This should make the radio easier to program. I will post more after my radio arrives and I have had time to test it.

Sincerely,
Tim

Not only that but when I first bought the software the original disk was bad
and I had to send Mr. Sam Durham (owner of the over priced program) my
original disk before he would send me a new disk.

Version 3.44 used key disk copyright protection and every once in a while
the program would get a wild hair and want the key disk inserted.
I now use Radio Manager, I am a regestered user and I get all the updates
for FREE!

Sure, it's a good radio, so far as it goes. There are just too many gaps in its frequency coverage for me. Give it 25-1300 continuous (minus cell, of course) and then you can argue about how good it is. Hey, a Rolls may be the best car in the world, but if you can only drive it on the busiest roads then there are a lot of neat places you'll never be able to visit.

1) Figure what frequency your garage door opener operates on.
It should be around 300 to 400 Mhz, tune your scanner to that freq.

2) If you live near a military base, expect interference from the
military installation, especially the navy, because low-power
devices such as garage door openers and cordless telephones
are regulated by part 15 of the FCC rules, in which your device
must accept interference and must not cause interference.

I don't know about the NOAA weather problem you are having but as far as the alert for police.... I have a BCT-7 and have learned over time to just ignore the whole alert option. Not every police car has a repeater (or whatever it is) going - so if you are hopeing it will warn you police are near you are out of luck. When it does go off they could be anywhere and as far as I can tell it's useless info. Neat, but useless. Just my opinion.

1419. Re: MIR QSO info?

Newsgroup: rec.radio.scanner
Date: 1998-10-16 00:00:00 UTC
From: Jim <jsides@flash.net>
Message-ID: <3626ED16.22B0@flash.net>
Source record: 141389

Hi Jack,

I had a 2m FM QSO with Shannon Lucid on 6/9/96. I found the address
of the QSL manager in a "QST Magazine" around that same time. Looking
at the QSL card I received (maybe 6 weeks or so latter), the back of
the card shows the following info:

2-x way QSO CFM by RV3DR-QSL manager
P.O. Box 1501, Pine Grove, CA. 95665

I don't remember if this is where I sent my QSO info but I did get a
card. I would check the "QST" mags dated around March to Sept. 1996 if
you want to be sure. Then again, there MAY have been a different QSL
manager in 1995 and then, I think you had to QSL with the Russians at
that time. Since a U.S. astronaut was aboard at the time I made
contact,
I know I had to go through the U.S. QSL manager in 1996.

Good Luck, Jim - N5APG

Its checking the "extender" channels for whatever state you selected, when
it finds
activity on one of them it will sound an alarm and the red "WARNING" lite
will
flash. To restore deleted frequencies, make sure the BCT-2 is not scanning
(open
the squelch) then press and hold the (DELETE) key until "CL" appears on the

display.

Hi Ted (and the rest who got screwed by Mr. Durham),

I have the same problem. If I DO get the upgrade, I will definitely
run make a copy of the disk using a program I found a few years ago that
copies disk bit-for-bit. It has NEVER failed to make an EXACT COPY
(Copy Protection and all) of any disk I've made using it. The program
runs under DOS only (old program) and is called "Teledisk". They took
it off the market because the only thing they found people using it for
was to make copies of copy-protected disks (5.25" and 3.5"). I would
DEFINITELY use this on the new program IF i get it just so I will have
a backup if the original fails or I happen to missplace the original
disk.

Let me know if you get the Windows version and I will email you a
copy
of this great copy maker.

Good Luck, J.

If you have powerful software and want to have fun with your scanner then you belong on 4phun-scanning.

You must be HTML compatible with Outlook 98 or Outlook Express 4 or 5 and MSIE 4 or 5 to subscribe. Almost all messages on the 4phun lists are email messages that are HTML formatted. To subscribe go to http://www.onelist.com/subscribe.cgi/4phun-scanning

They use the special frequencies that only your brain can hear. Can you hear it ? I can, they are saying go to California cause thats where all the nutz of the world must go although Montana is catching up.

1430. Mod didn't take - why? pro-2036

Newsgroup: rec.radio.scanner
Date: 1998-10-16 00:00:00 UTC
From: wrh@cbemg.cb.lucent.com
Message-ID: <707b2o$lcl@nntpb.cb.lucent.com>
Source record: 141400

i have a pro-2036 date= 4A4 (april 94)
i did the mod for this (3 104 resistors out, 2 moved to empty pad)
same mode as the 890xlt
BUT
it didn't take
i used 2,9,lockout to reset the thing too, but no good
i'm sure the resistors are in place, i had a guy who has
surface mount repair tools do the soldering (w/ scope too)
any clues??
i may do the "down converter" mod but would rather this one worked . . .

thanks
billh

I've talked to then a few times ... as I recall, it took nearly 4 years to
get a card, and when I did they sent me four (one for each contact).

As I recall, there is a Moscow address ... I don't have it handy.

Check out the following URL:

http://speed.nimh.nih.gov/listener/ralistener.html

It's tunable R7000 located in Washington, DC area that you can
listen to with real audio.

1443. Re: ScanStar

Newsgroup: rec.radio.scanner

Don't feel bad. I have an all up ScanStar Deluxe. It runs great the day it's installed. Next day it might load, or again, most likely it will say. "Can't find ssuscan.dll - check to see that it is intalled and spelled properly." Or reinstall.

Naturally, the .dll is there and properly spelled. Sometimes on the following day it will go ahead and load without a whimper.

Reinstlling makes it work, but can't go reinstalling every day.

Got a few suggestions from Mr. Durham none of which helped.

Tried Scancat Demo, it runs fine but I can't stand that hokey radio panel, and it slows my machine to a crawl. I mean you do want to do other things while listening.

Got the RadioMax Demo, it runs great. Lacks a feature or two, but doesn't slow the machine down.

All in all I like the look, feel, and functionality of ScanStar the best, but can't go re-installing every day. I should have known better. The free demo acted the same way, but I was stupid enough to believe that the purchased version would run OK. NOT!

Cheers
Richard

>Besides, monitoring the landline is easier anyway...

Well, not that its hard, but does require some amount of physical
access. It can hardly be considered easier than turning your scanner
on...

But, if You're paranoid, get an ISDN line and phone, for the shortest
possible analog path. In Europe, Siemens even has a cordless DECT
system for BRI access, with up to 8 handsets. Two POTS for fax or
modem, and with extra MSNs, each handset can have a direct number.
Very nice.

/Marcus

Most Pro-39's are modifiable, I've got one and the mod worked perfectly.
However, I understand that anti-tampering measures were put in place on
late production year models of Pro-39, though I haven't seen one.

In what way did you figure the mod was wrong? Can you give me a
description of the procedures you're following?

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated September 14, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

OCTOBER 1998

Oct 4 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Oct 11 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

Oct 17 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

NOVEMBER 1998

Nov 22 (Sun), Wheaton, IL. GMRS Electronics Flea Market. Dupage County Fairgrounds. Sponsored by GMRS of Illinois, Inc. Admission $5. Kids under 12 free. Open for setup at 6:30 AM. Building doors open for buyers at 8 AM. Info: (815)756-3933 or (630)393-3937.

Nov 28 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1998 by Bob Parnass, AJ9S |

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A crystal scanner are not working and the lamps for those channels won't light, replace IC4 or IC5 (type 7400A).

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1998 by Bob Parnass, AJ9S |

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable
Oct 1998 - AOR AR8200 portable |
Nov 1998 - Alinco DJ-X10T portable |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech

inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with

little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the

schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel

interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen,

police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging

capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring

Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn

on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt

alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob

Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands

programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an

optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough

condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

http://patent.womplex.ibm.com

I've heard something very interesting on my scanner a couple of weeks ago.
I was listening to a incident that the Pennsylvania State Police was responding to.
The incidents nature is irrelevant to what I've heard, so I'll skip it.

I heard this transmission on TAC 1..
" Yes, I 'm trying to call him now, I'll let the phone ring off the wall if I have too."

Then a few minutes later I heard..
" I can't hear a damn thing, (then a few mumbling words which included transmitting) I can't hear anything on the "Voyeur", he must have pulled the plug from the wall."

Comments?

hello there
I am trying out the software Listening Post made by LP
Comunications,and it's a very good scanning software for the OPTO535,but
i have one problem
If i run the software more than 5 hours the computer overload slow done
and luck's up, and after a two or three more hours it crush
Is any one use this software and if it is do you have any problems
I am asking before spending $150 to purchase it

thank you very much

HAMFEST October 25, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 25, 1998

LINDENHURST, LI - NY

On October 25, 1998 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reserations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam seesion. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

> Does the Freedom of Information Act, or any FCC regulation, reach that deeply to require anybody to disclose such a radio frequency?

Nope, In a case like this its usually caused by the lack of knowledge. Easiest thing to do would be to look at theyre handheld radios if the antenna is fairly long say around 6-7 inches long look around 154-158MHz if the antenna is 3-6 inches look around 464-467MHz and as a last resort try 856-865 MHz.

1478. GSM scanning

Newsgroup: rec.radio.scanner
Date: 1998-10-17 00:00:00 UTC
From: dracus1@aol.com
Message-ID: <19981017140006.02336.00002550@ng65.aol.com>
Source record: 141248

Has anyone try scanning GSM Cellphone with a GSM Cell phone? Anybody interested in trying to hack the GSM Cellphone system? I believe it can be done using a GSM cellphone for listening to other Cellphone conversations. Here is something to read up on.
http://www.l0pht.com/~oblivion/blkcrwl/cell/gsm/gsm-secur/gsm-secur.html

I would be interested if this has been done before, and how?

1479. Help me modify Icom R-10 in LA?

I was scanning the other night and obviously came across some cellular freqs and am wondering something....

All I ever heard was one side of the conversation, the person talking to the cel-phone holder. I want to know simply for educational purposes of course but why can't I get both sides of the conversation?

HI

DO YOU HAVE A PICTURE OF THIS SCANNER?

THANKS

1485. FS: Icom R-100 Mobile Scanner/Receiver

Newsgroup: rec.radio.scanner
Date: 1998-10-17 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <70av3fsvq1@eve.enteract.com>
Source record: 141255
Cross-posted to: chi.forsale,rec.radio.scanner,rec.video.satellite.misc

Hi! I have an Icom R-100 mobile scanner/receiver for sale; some specs:

100 kHz - 1856 MHz *continuous*, 800 MHz unblocked
AM, FM, WFM
100 Memories
20 Scan Edge Memories
AFC
Auto Noise Limiter
Keyboard Entry

Dimensions: 5.9 (W), 2.0 (H), 7.1 (D), 3.1 lb

The radio works perfectly, and is a cosmetic 6-7/10 (just the normal wear for a mobile radio). It includes the manual, mounting bracket, power cord, and factory box.

$400, and I'll meet you somewhere in the Arlington Heights/Woodridge, IL area for delivery, or buyer pays shipping. No trades, please.

Please drop me a note if interested.

Thank you,

Paul WD8DKY
paul.knight@prairiecomm.com

He had his Internet access from his ISP revoked due to harassment &
trouble he was causing on this NG & in other areas about 2 months
ago. You won't find him on the Scan-L mailing list either because he
was kicked off of that mailing list due to several rules he violated
on that mailing list.

However, he has a new internet account & has chosen not to return to
this NG. This is a decision he made that many of us respect. You
can write to him at "bcheek@cts.com".

Now available reconditioned Motorola Keynote pagers with monitor function. These pagers can be put on your freq and tones for a total of $155. They function very similar to the Minitor II pagers and will alert with any tones that will set off the Minitor II pagers. Also available with the pager: Voice Storage, vibe, chargers, and batteries.

Over 1,000 pagers in stock, in all bands, 33 to 47MHz, 148 to 165 MHz, 450 to 470MHz, and 900MHz. We can put them on any freq and tones you want for the same price of $155 each (Dealer prices lower). There is a 90 day warranty with all these pagers.

Visit our web site for a picture and complete description.

http://members.aol.com/pwserctr/home.htm

Hmm? Did you remove a diode? As I remember, you open the case and have to remove two boards and desolder the antenna connection, then desolder a steel plate from four attaching points and remove a diode from the board located under the plate. A little tiny diode marked D-7 or somethin'. Does that sound like what you did?

Military NFM/Medium(Combat) FM is on 25 KHz channels, all thru 25-76 MHz.
In the USA, they normally use only specific bits of this, 32.000 to 33.000
(not inclusive) being one of them.

That said, no idea if it's common, or simply a handy local tactical air to
air channel where you are.

From: R Clark <rcclark@tenet.edu>
Message-ID: <70ec73$16e@mercury.hiline.net>
Source record: 141278

Why use aural brevity codes?
>One main reason, is to limit what the public knows.

No...this really is not an accurate statement.
Aural brevity codes (10 codes, 11 codes, 12 codes, etc...) have been used a long time. In 1974 APCO (Associated Public Safety Communications Officers) commissioned project fourteen to study and document the development and use of aural brevity codes. In their study of aural brevity codes, APCO concludes "A code, as such, can be used for the purpose of achieving secrecy in communication. Security, in this sense, is NOT expected from an aural brevity code." Aural brevity codes are used to simplify and streamline communications where the same message is repeated often (i.e. "unit 300 is 10-8" versus "unit 300 is clear from the call and available")

> In those cases, it is plain and simple.
>Codes are a way of being short, sweet, and to the point while on the radio.

Now your on the right track...but aural brevity codes will never replace or eliminate clear speech communication. Aural brevity codes are focused on limiting repetitive communications and offering all officers, ambulances, fire trucks, tow trucks, etc... on a system a way to communicate clearly and efficiently with each other - i.e. everybody knows the codes. When everybody knows the codes there's no secrecy.

I assume you mean the scanner battery. And no you don't run too many amps into the scanner battery. The power supply you plug into the wall is 12 volts (more or less. The battery is something like 5 volts. The scanner includes a charging circuit and it's probably good over a moderate range of voltages, including the car's usual variations.

It is a UHF "Close out " radio. It was a bastard child from Maxon. No
factory support. It uses different software than all the rest. I think
Pagecom bought out all the factory had at fire sale price then dumped them.
It started out as a 99 channel radio that was going to kill the compitition
and now ended up a POS. Steve

What is a Voyeur then?
How could the police know that there was no ringing in the house?
The police had no cell phone capability.
The voyeur subject didn't come up until a while after "I'll ring it
off the wall if I have too".
This cop was waiting for backup.
The offense was wasn't really that serious.
And what does the "nothing is transmitting" mean?

1520. North Atlantic Tonight - Airspace Radar View and Log

Newsgroup: rec.radio.scanner
Date: 1998-10-17 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981017040307.24935N-100000@alfa.ist.utl.pt>
Source record: 141317

Hello

Another good log for the North Atlantic.
This time I spent 1 hour listening this airspace on only 5598 KHz:
this frequency was being worked simultaneously by Gander, Shanwick, New
York and Santa Maria making it very busy (normally more than 1
communication/minute). I could say it was not an airspace communcation
freq...it seemed like a continuous converstaion.
About the planes: a Futura B737 routing from Ireland to Spain was
the best but there were many other new a/c's listened for the first time
for me.
Also there was a curiosity: Gander Center used the Selcal Code
'CJAG' to call NWA36 but both NWA36 and NWA50 received it (the last one
Selcal was CJAL).

As usual you can obtain the gif file with the radar view is at:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex11.gif

Really hope you enjoy the logs.
Note: I did not included freq data since all logs were made using
5598KHz.

Best regards, Andre Brandao

Hello
All,
10-16-98

I've owned a PRO-2004 for close to 10 years and the unit still plays as if it was brand new. The backlit display however is quite dim and has been getting worse over the years. I am looking for a replacement display but I haven't had much luck. I am interested in a non-working PRO-2004 for parts or if anyone knows where I could obtain a replacement display.

Thanks,

Denis - W1WV

1526. Deaf Bearcat 220 scanner - does this diagnosis seem reasonable?

Newsgroup: rec.radio.scanner
Date: 1998-10-17 00:00:00 UTC
From: mroberds@worldnet.att.net
Message-ID: <7096an$qi5@bgtnsc03.worldnet.att.net>
Source record: 141323
Cross-posted to: sci.electronics.repair,rec.radio.scanner

Hello all!

I am working on a Bearcat 220 scanner for a friend. Originally, the complaint was that it quit working after he dusted it out with a 100psi shop air hose. I found that the keyboard had been damaged but the scanner was otherwise OK (display bright, scan/manual works, squelch and volume work, accepts keypresses of undamaged keys). So I got a new (used) keyboard and installed it and all seemed to be well. I programmed several local frequencies into it, in the 40 and 150 Mhz bands, and ran the scanner for about five hours continuously. It seemed to work just fine; picking up all the same transmissions that my PRO-64 did. I shut it off and went to bed.

The next morning, I decided to check it one more time before returning it to him. I turned it on and it seemed to scan OK, but it wouldn't ever stop on channels I knew were active (per my PRO-64). I could turn down the squelch and I would get white noise and it would stop scanning, but it didn't seem to be receiving. I programmed in the local Weather Service 162.55 and couldn't get it to pick up. This was using the same antenna and setup I had used the night before. I poked around in a little and finally ordered the service manual for it. Note: I don't have a lot of test equipment; I do have a modern high-impedance DMM that has the usual voltage and resistance, plus logic test, duty cycle (0-100%), and kHz measurement. No, I don't have a scope. Yes, I have read the "Repair Tips for Bearcat Scanner Radios" by Bob Parnass.

Tonight I have been working on it and I'm curious to know if what I have found sounds reasonable. The first thing I checked was the various power supply voltages; they all seemed to be reasonably within spec. The next thing I checked, following suggestions in the service manual, was the band switching. There are three points you are supposed to monitor for voltages as you tune it through four bands. The bands and test frequencies I used were VHF-low (41.0), aircraft (127.0), VHF-high (159.0), and UHF (466.0). I found that one point, the AM receiver control, worked fine - on for aircraft band and off otherwise. However, the other two points were always low (0 V), when according to the schematic one of them should have been about 6.9 V and the other 22 V at the proper times.

These two faulty points both come out of the synthesizer chip, which is where I was measuring them. I turned off the radio, discharged

the power supply, pulled the socketed synthesizer chip, and measured the resistance between the two points and ground, looking for something that might be pulling these lines low. One of them was very high (megohms) and kept rising; I expected this because there was a 0.47uF cap across this line and ground. The other line was about 6K to ground; there was no cap on this line and that value seems reasonable to me given the resistors to ground that are across that line. At this point I suspected a bad synthesizer chip.

Just to make sure, I checked the inputs to the chip. Most of the rest of them seemed OK, but I decided to take a look at the inputs to the synth chip from the microprocessor. These consist of a data and a clock line coming from the uP. The clock line is run through 1/4 of a 4011 for gating; the data line runs through another 1/4 of the same 4011 that is wired as an inverter. Looking at the clock line, which should have been at 108.33 kHz per the schematic, I saw 108.4 kHz on both sides of the 4011 and at the synth chip. Also, measuring the duty cycle, I saw about 70% on one side of the 4011 and 30% on the other. The gate line seemed to be held on (I had the radio in manual mode.) Both of these observations (frequency and duty cycle) seem to me to be consistent with what should be happening.

The data line, however, didn't seem as normal. Looking at it, I got about 16 kHz on one side of the 4011 inverter but only about 0.6 kHz on the other. The duty cycle was 80% before the inverter and about 60% after. I know these measurements are shaky, because data is a bit stream and not a regular signal like a clock. However, I think that just inverting a bit stream should cause about equal frequency readings on either side of the inverter, and that the duty cycle readings from either side of the inverter should total about 100%. Maybe these are erroneous assumptions?

Finally, I checked around the 4011 chip. The other two gates don't seem to be used. The V+ supply to the chip was OK but ground, pin 7, was weird! It registered about 3.5VDC! I made double sure I was on pin 7 and that pin 7 is ground for a 4011, then I grounded the pin with a clip-lead. This didn't seem to have any effect on the radio performance or the readings I got on the clock and data lines.

Right now my big suspect is the 4011. Reasons: the inverter weirdness mentioned above, the fact that it's both old (1979 date code) and CMOS makes me think it might be a victim of ESD; and because it's cheap and readily available. :) After the 4011 my suspects are the synthesizer chip (still) and the microprocessor; probably the synth first because the uP seems OK in all other respects and the synth chip is made to run hot (it has a heatsink glued on top of it). I have checked out the relevant interconnections both by ohm-meter and by making sure I wasn't losing a signal somewhere along the way. I already touched up some of the nastier solder joints when I replaced the keyboard.

Any comments, suggestions, things to check? Does this diagnosis sound reasonable or am I way off the mark? I know a bit about electronics but I haven't had much repair experience, so any suggestions would be welcome.

Thanks very much for your help!

It was the removal/ disconnection of D? (don't remeber the #) to unlock
cell freqs.
Found it on web, I think it was written by Bob who has a column in either
Monitoring times or popular communication.
Did the mod, but cell freqs were still locked out.

I am using a BC9000XLT and trying to use it with several applications that require discriminator output. My problem is once I plug the scanner into the mic input of the soundcard, it causes my scanner to hold on one frequency and all I hear is static. Any suggestions on what this might be, and how to get rid of it?

Note: I can use a dataslicer without any problem and get 100% accuracy.

Thanks,
Matt

1543. FS: Yaesu FRG-9600 multi-mode scanning receiver - $360

Newsgroup: rec.radio.scanner
Date: 1998-10-18 00:00:00 UTC
From: bodoh@splitrocktel.net
Message-ID: <908744753.526380@nntpcache2.nortel.net>
Source record: 141140
Cross-posted to: rec.radio.amateur.swap,rec.radio.swap,rec.radio.shortwave,rec.radio.scanner

For Sale: Yaesu FRG-9600 multi-mode scanning communications receiver.
Receives 60-905 Mhz continuous
100 memory channels in 10 banks of 10
All mode - AMN, AMW, FMN, FMW, USB, SSB, CW
Can be computer controlled
Clock, timer
Triple conversion
Signal strength meter
Search, priority
Attenuator, tone control
Dial or keypad tuning
Base or mobile operation (mounting bracket, DC cable not included)

This receiver is ideal for those wanting to explore all signals between 60-905 Mhz. It will receive amateur radio (all modes), military (all non-digital), public service, business, FM broadcasts, TV broadcasts, etc. There is even an optional board (this radio does not have it) which will allow you to connect a monitor to it and view TV signals! In particular, this receiver should be of interest to amateur radio operators working satellite and DX. Radio is in mint condition and includes the whip antenna, AC adapter and manual.

This radio originally sold for $550 to $600 with dealers selling it used for around $400 currently. Price is $360 firm, I pay your choice of UPS or USPS shipping. Payment by postal money order only, no trades, US sales only. Please Email if interested. Thanks...

When you get the line of asterisks 99% of the time it means the
polarity just needs to be inverted! Eg. start the program with /RE
It depends on the scanner, some of mine need it, some don't...

The impedance is possibly too low at the sound card's microphone input. The data slicer's input impedance is very high, so it does not load you BC9000XLT discriminator output.

A solution is to build a buffer amplifer (~ Voltage Gain = 1) to isolate the low impedance micrphone input. Radio Shack at one time had an engineers notebook for sale with a 741 based buffer amplifier diagram.

Ivan Ivanovich

1552. Discriminator output Pro 2006?

Newsgroup: rec.radio.scanner
Date: 1998-10-18 00:00:00 UTC
From: Rick Kempe <rekempe@hotcoco.infi.net>
Message-ID: <01bdfaed$7fb7ff80$38bd65ce@ibm>
Source record: 141149

I've been successful in locating the discriminator output (pin 9) for the 2006, and soldered a wire from that pin to an RCA check (center) mounted on the back, but it does not appear to be providing the needed signal for decoding POCSAG. Anyone out there have any experience with installing this jack? Should the wire used be shielded, or is there a need for a resistor? I haven't been able to locate any info other than the IC pins on the net. Any help with using the Optolinx for this decoding would also be appreciated (half or full duplex, which input, etc.).

Source record: 141151

I don't have experience with MDT1234 but have noticed a similar occurrence with Trunker. Solved the problem by using the Invert or Reverse parameter. Seems that whether or not you invert depends on the scanner IF scheme. If you convert up in frequency the data is inverted from converting down in frequency. Also had the same thing show up with the Opto DC-440 Tone Decoder.

You may actually want to scan the 463 -464 range also.. has alot of
college security type frequencies.

You could try using MS Acess as well. It is fairly simple to create a point and click frequency manager with custom searches, reports, etc...

Funny about your batteriers noit making contact. I put new batteries in my unit and practically had to use a hammer the compartment was so tight. I think AOR needs to resize that compartment.

I thought the 8200 sucked until I switched antennas as well.

From what I have read about tempest it is crap. It is too expensive for an average joe to monitor the high scan rates of todays monitors. Try: www.infowar.com or l0pht.com. Consumertronics (www.tsc-global.com) will gladly sell you a $1000 unit that will work on ten year old monitors.

1591. AR 8200 - Comments

Newsgroup: rec.radio.scanner
Date: 1998-10-18 00:00:00 UTC
From: Anthony Larkin <footman@iol.ie>
Message-ID: <70cfsb$p9l21@kirk.tinet.ie>
Source record: 141200

Subject: AOR (UK) Ltd. Power Supply Unit

I note that the power supply (mains charger) supplied with my ar8200 serial no. 070062 is "unregulated" with Input: nominal 230V a.c. and Output: nominal 12V d.c.

Surely, it should be regulated to prevent any power surges or whatever which might cause the voltage to change and likely cause damage.

My unit was bought by my Irish supplier in the UK.

Also of note, when I took delivery of the ar8200 it would not work on batteries because the battery pin/contact was not making contact properly, I rang AOR UK and they were most helpful, understanding immediately where the problem was and suggesting I return it, or open it myself and push the pin into place. I did this with the help of Blue Tack and resolved the problem immediately.

Other than that and a near useless Rubber Duck - I am delighted with my ar8200!

Anthony Larkin (Ireland)

P.S. Are power units elsewhere also unregulated? comments welcomed.

I bet you're asking how I'm getting these bulletins. Well, it's from a new
service at
http://www.stormwarn.com that's easy to set up. First you set up an account,
and you can select the types of messages you want delivered to your email
45-55 seconds after it is issued.
For instance, if you're away from your TV and there's a tornado warning
issued (and your browser checks your mail automatically every 3 mins), you
will get it in a flash and have time to get to safety.
You can select the types of messages (warning, watches, special statements)
for a specific county or multiple counties...and you'll only get those
messages.

The *best* thing to do is to go to Radio Shack (not an advertisement, but
they are the only store that has the good-quality types) and get a Noaa
Weather Radio with SAME (Specific Area Message Encoding).
When you set this up, you program the county or counties you want to be
warned for (if you need the numbers, let me know). When a warning is being
issued, the weather service send a special code for each county involved. If
your county is being warned, it will turn on an alarm (which can wake you up)
and then turn on the broadcast and you can here what's heading your way.

These things should be as common as smoke detectors in all houses and
buisnesses...it could save your life.

>P.S Are power supplies elsewhere also unregulated? - comments welcomed.

Almost all portable electronics use unregulated wall supplies. Usually they
have an internal 78xx series regulator on the PC board. You will often
find the area near the power jack gets warm as the unit runs because of
heat released by the regulator.

The only two modern components I own that require regulated inputs are a
Sharp-manufactured minidisc recorder and an Iomega ZIP drive.

Subject: Need data on Shakespeare Pogo Stick 318-GBT(28.885
machine?)
Cc: rec.radio.cb
Date: Sun, 18 Oct 1998 11:49:18

Hi All.

Can anyone tell me what this is? :(IE: electrical details)
I recently purchased a fiberglas/aluminum vertical whip.
Aprox a 6' fiber base, and a 12' vertical aluminum top section.
As far as I can tell, there are no ground wires needed but there
is a small bolt near the bottom for ?? (maybe a coil???)
It's labled as a "Shakespeare POGO STICK model 318-GBT"
No data on any of the Shakespeare pages. No electrical contact between
the so239 and any surface or connection on the outside of the antenna.

I can't find anything at all on the net about it, and the 2nd hand shop
I got it at
didn't know. I thought maybe it was an older CB vertical that I might
load on
28.885MHz (ahhh..., the link to the VHF reflector-6m liason qrg)

I put it all together but it won't resonate on *any* freq from
1.8-174MHz so I
am thinking a broken connection somewhere or a missing part. I took the
bottom
plug out and the 'interior' coax connection to the so239 is all ok.

Someone mentioned to me they thought it was a 26-30Mhz antenna, but
needed
an external coil to operate it, but that's all they knew. Would be a
shame to
trash this rugged beast, as I am sure it'd make a dandy 28.885Mhz
aerial.

Any leads, tips, ideas?

Many thanks!

MIKE/ve9aa

This thread should be interesting.
How 'bout a discone on top with the vertical cut to choice,
a vertically-polarized TV/FM antenna and a 800-900 MHz yagi
in your mast-mounted rotor. The smaller yagi might not be necessary
if the UHF portion of the TV antenna performs well. I'd like to include
a 10m antenna somehow, but with 10' of useable mast, not likely. Would
love to hear comments on stacking order, necessary separation lengths,
etc.
if the four antennas above were mounted on, for discussion purposes, a
mast
of infinite length. BTW, I have a flawless, slightly overpriced PRO-26
for sale
for $300 shipped. 25-1300 MHz minus cell, I guess that just about covers
it.

Source record: 141226

Hi All,

I've came across an old Regency K500 scanner that has some problems. When plugged in it continuously sounds a loud tone even when turned off. The display is an old red LED type that shows all 8s when powered up. I can't get any response from the keyboard, though I can get audio through the speaker and the squelch control works. I ran across a 1996 newsgroup message from an individual asking for help for these same problems, but couldn't find any further info. Has anyone seen these type of symptoms from a K500? I collect old scanners and would really like to get this one working again.

Thanks,
Steve

1621. MDTW1234, It works, but not with all scanners.

Newsgroup: rec.radio.scanner
Date: 1998-10-18 00:00:00 UTC
From: sal6169@my-dejanews.com
Message-ID: <70dij9$5ch$1@nnrp1.dejanews.com>
Source record: 141230

Hey everybody,

I'd like to report some success and ask for further help with the following...

I have been playing with the software program MDTW1234 which allows you to read the messages sent as digital information to some police cars equiped with laptops. It works fine with my PRO-46 but not at all with my PRO-2022 and PRO-2026. I installed discriminator outputs in all my scanners as per Bill Cheek's faq instruction. I have checked over the installations very carefully, replacing, and swapping components many times.

I have built two data slicers as per instructions I found in a document called Allinone. They both work with my pro-46. I connect the discriminator output to the data slicer input, using shielded wire, and then hook up my serial cables to my computers. I tune the PRO-46 to the local MDT frequency, and my computer screen starts flashing the messages mixed in with some garbage characters. When I do this with the other 2 scanners, the computer screen only displays asterick's (eg. *******). The pro-46 will often not produce anything on the computer screen even though I hear it recieving the MDT transmission. The other 2 scanners always produce the " ****** " characters whenever the recievers pick up MDT transmission. This led me to believe that perhaps the 2 troublesome scanners where producing a stronger output signal than the pro-46. I tried adding a 3 ohm resistor and then a 2200 ohm resistor to the discriminator output connection but this didn't make a difference. I also tried removing the capacitor from the discriminator output connection, as suggested by someone who did this with their pro-2006, but that also had no effect. I am at a loss for things to try, I don't have enough knowledge to proceed any further. All I can do now is approach the problem with trial and error methods, something that I don't want to do as I'd hate to fry a good scanner<g>.

My only conclusion is that there must be a difference between the scanners, as I have kept all other variables fixed.

The handheld PRO-46 uses the TK10421M-3LT chip, the PRO-2022 uses the MC-3361N, and the PRO-2026 uses the NJM3359D-A. Does anyone know if there is a significant difference in the baseband audio output signal strength of these chips?

My big question is, has anyone else had problems similar to mine and if so, have you solved them?

I would appreciate any and all suggestions.

If you are not comfortable posting to this newsgroup, you can contact me temporarily at sarina_p@hotmail.com

Sal

ps. I'd like to thank the people who created the software and hardware diagrams, along with anyone else who contributed to my being able to get as far as I have with this project. Once I get this mess sorted out and I get my hands on a cheap test scanner, I'll be tinkering with computer control through the PLL2002 connections.

>>Digital has a longer range along with great clarity.
>
>Digital has LESS range, AND less clarity. Ask anyone who has
>had to use NexTel or Motorola digital systems.

Wrong. The investigation agency I know uses them and they are much clear
than analog cell phones. As for range, we have the relay dishes all over
the city. These guys can keep in contact with each other throughout the
city. Take a look at how the Nextel system is set up and you'll know why.
This does seem the future of radio and cell phones in business.

Cell phones are duplex, not simplex. The recieve and transmit frequencies
are different. That way one can talk and hear at the same time. Unlike a
CB radio for example which is simplex.

Sal - Could you provide me with info on the discriminator output for the 2006? Maybe it's in the FAQ file by Bill Cheek, whose web site is down. I know it's pin 9 of the 10420 IC, but does it need a ground, if so, where? How about a resistor? I located the file by Bill Cheek regarding the pinouts for the IC's but no instructions for how to go about doing it, and I'm electronically challenged. Any help would really be appreciated.

You may be right. You said clearer than analog "cell phones" but the original post compares nextel to analog radio. No comparison. Shorter range and less quality. It is also an ineffective mode for public safety. It may be great for businesses, but a cop or firefighter (I am one) cannot be dialing numbers all the time as with nextel.

If you're thinking about buying a scanner from outside-the-US dealer, you better act fast (either that or sit back and be prepared to wait several weeks, perhaps months). The dollar is being hammered in most places around the world, causing prices in US dollars to go up dramatically. A scanner that sold for say, $299 last week, will now cost you $329 this week. In some countries, the difference is even more dramatic. If you read the financial papers, the word is that it is going to get worse before it gets better. You can buy now or wait quite a while (who knows how long) before prices get back to normal.

The silver lining in the dismal cloud is that the scanner you bought last week has appreciated by at least 10 percent.

Actually I did mean the two-way radio mode. The clarity is so much more improved. BTW, you don't dial numbers to use this function, you just select the channel. Given the technology that they are using and the amount of money invested, I could not forsee why anyone would use digital if it "had less range and less clarity". That in itself is rather ridiculous. Again, take a look at the Nextel system and you will see why many construction companies utilize this two-way radio because of it's range and clarity. the amount of digital relay stations that it Nextel has more than supports. Again, you would have to have used a Nextel to know.

1636. African Aviation HF Log and Radar View

Newsgroup: rec.radio.scanner
Date: 1998-10-19 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981019212521.24441N-100000@alfa.ist.utl.pt>
Source record: 141044

Hello

Excellent signals, busy airspace and sometimes very intersting and unusual flights make the african airspace, in my opinion, the world's most intersting airspace.
Just take in account that at the time I made the log (for only 30 minutes, between 0054 and 0124 UTC) only 2 frequencies were being used to communicate with flights in an area of at least 60% of the continent. More than 20 flights were giving position reports.
These frequencies were:
8903: Kinshasa, Libreville, Luanda and NDjamena Centers.
8894: Niamey and Algiers Centers.
Both with 5/9 signals in Europe from all Centers (specially Niamey and Kinshasa Centers).

It is possible to view how the airspace looked like at:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex12.gif

Note: the circles around each flight represent the minimum horizontal distance between aircrafts and it's objective is to monitor near misses in real-time.
At this hour, almost all the fligths were routing from South Africa to Europe but at about 23:00 UTC there are many african regional flights (B737 from Cameroon, TAAG, etc and a lot of old B727).
Also there is another freq that is very busy too, working the east part of the continent: 5517 (Cairo, Tripoli, Khartoum, Addis and Nairobi Centers).

So that's all for now. Hope you enjoy the post.

Best regards, Andre Brandao

They don't have to tell you anything. The licence info is available at the FCC offices, probably.. but you have to know what the real licensee name is, to find it. Best bet is one of the several CD-Rom FCC databases, search for the security company name. And see if you can find out who owns them, might be under that name. If they're using an SMR system, there IS no license info, other than the license of the system owner, who doesn't have to report the names of users of his/her system to the FCC at all, simply have the info available for FCC inspectors at his own place of business, if they need it.

OK. Explain to me how my fire department, the local Sheriff's Dept, etc. is going to utilize nextel. I am in Laramie County (Cheyenne) WY. Our comm. distances often exceed 70 miles. We are pushing the limits with VHF, as low band would probably suit our needs better. UHF would absolutely not work here, I've tried it with ham repeaters. Now, how is this switch to nextel going to be inevitable? How would the Highway Patrol here use it, their distances are even greater? You say I would have to use a nextel to know, but I don't agree. You would have to be familiar with each specific situation to make a blanket statement like you have. The system you tout so heavily won't work here, barring hundreds or thousands of towers. Even then, terrain is prohibitive.

In an urban setting, it may work well. However, you won't soon see the end of analog comms. Why would a small, single site business use anything but a simplex operation? These nextel systems simply offer an alternative, much like Motorola's trunking systems, which has been an absolute disaster here, especially for the City FD who bought into the hype. Cost will be your single biggest prohibitive factor.

If the range of these radios are greater, than why are so many more towers
needed? In general, higher frequency, lower range....

Some cellular systems transmit both sides of the converstions on the
output (869-895 MHz) side of the channel. Some do not. My guess is that
this affects the "reverb" effect sometimes heard on cell phones.

Our current digital cellular phones have a more pronounced reverb effect.
I don't know if they are retransmitted on the repeater output, since I do
not have a digital receiver, but I have noticed a notable delay in voice.
I had our dispatch radio on in my car when I spoke to another guy who also
had the radio on, and I heard the radio traffic on my radio one or two
words ahead of his radio via our cellular phones.

Believe what you want. Many government agencies have future plans projected for the overhaul of their communications from analog to digital. I know of several employees from Bell Northern Research as well as Motorola who are currently working on these projects. Customers want better communication through range and clarity, both of which are better achieved through digital technology. Give Motorola a call somtime and they can better explain the technology involved. Price seems to be the only limiting factor right now, but as the technology becomes more prevalent and government comes under increasing demand, this technology will become more feasible and affordable. Can't fight the future.

Personally I think the Nextel has MUCH worse clarity than analog radios.The company I work for switched to nextel from an E.F. Johnson trunked network and I liked those radios MUCH better than the Nextel.the clarity and rang were alot better and it wasn't an all or nothing type of transmission.The only thing I like about Nextel is it's an "all in one" package.

I guess I should have been more specific. I used the Nextel phone as an example. Motorola and Bell Northern are working specifically on digital two-way radios. And my understanding is that these work extremely well. I'm not trying to say that I am an expert in digital technology, I've just been involved in several discussions with those that are involved in the field.

I did hear a report a few weeks back here in north east Iowa. I sure hope the person who called it in did not have a scanner, they would have been very irritated. Lots of ET jokes and other wise cracks. It was quite amusing! They decided to blame it on an airplane that had just landed at the airport.
My favorite call was last summer. Not a UFO call , but a lady called in to report that her neighbor was sitting on his front porch, and he didn't look very happy. She thought they should check it out!
Yep, I live in a small town.

I have one question for the person who made this blanket statement about digital radio???? Have you ever heard the expression: "They don't build things, like they use to"

I have worked with two-way radio equipment since I was about 16 years old, and have found that all the bells and whistles that come along with digital radios, are not worth the materials they built with. Most new systems that I have seen, digital or trunked, can hurt public safety officers. When time and durability count, nothing beats analog. I have dropped and dented and driven analog radios to their grave, but they have always seemed to still work. Also, you can switch channels up/down, increase/decrease volume, switch between duplex/simplex, increase/decrease squelch by touch and without the need to visualy look at the radio. You try that with some of the new radio systems. I'd like to see how well a digital radio will perform after it is dropped during a foot pursuit. How about when a dispatcher tells a unit to switch channels, do you honestly think the person has time to look down at his/her radio to type in the channel number?? I do not know where you live, but in Los Angeles, California the LAPD switched form there old 8-channel ROVERS (Remote-Out-Of-VehicleRadio-System) the new Astro Saber Radios. They have since had to toggle certain functions from being on/active to off/nonactive, due to officers who would hit certain buttons by mistake, which would sometimes cause them to L/O channels or transport them to the wrong channel, when all they wanted to do was switch to their HOME (base channel) frequency. Though I see the advantages to the new Astro radios, I would hate to see what might happen if departments switched to Nextel systems for daily duties. Todays digital systems need to be scaled down in complexity before they go into mainstream public safety work. Remeber the old saying KISS, "Keep It Simple, Stupid"

As for the need for scanners, you've got problems if you think they will be leaving anytime soon. Thats like saying radio is nothing but a memory of the past. Sure there are is TV and movies, and now CD's in a good number of peoples cars, but there will always be an audience who still tunes in. The same thing with scanners, there will always be someone or something that is on the airwaves, that will be hobbyist listening.

The Salt Lake County Sheriff Dept. purchased a completely Digital system and
it was their intention to change every radio in their fleet over to it.
However, due to lengthy install problems, and bugs...the system wasn't
installed on time nor under budget. To make matters worse, the system
doesn't perform as well as the regular system does.
Maybe it was faulty installation, right? Well, the folks from Motorola did
the install and they couldn't get the thing going. Real nice.
Now we have a multi-million dollar system that isn't worth a pot to pee in.
The system is now practically scrapped. The only radios in use on it is the
SWAT team, and they hate it.
Motorola has a lot of work to do before they can truly convince gov't
agencies here in Utah to change over.

1662. Re: Why do police use codes?

Newsgroup: rec.radio.scanner
Date: 1998-10-19 00:00:00 UTC
From: Robert <rc123@globe-net.net>
Message-ID: <362BF9BE.7DD4BCD6@globe-net.net>
Source record: 141070

Another reason is a detailed conversation can be carried on quickly
and accurately. Using codes is a way to carry on a structured
conversation
which limits unnecessary chatter. Police agencies will even provide a
list of
their codes when asked. These codes are typically universal and are
anything
but secret.

During a major drug bust, alternate frequencies are used and/or radio
silence is maintained. Many police conversations are held on cellular
phones. Just watch "Cops" on the Fox channel. These guys are
being rather creative today.

1663. Opto CF802's

Newsgroup: rec.radio.scanner
Date: 1998-10-19 00:00:00 UTC
From: Nick Kolias <macky@i1.net.yy>
Message-ID: <362C0C24.1C16@i1.net.yy>
Source record: 141071

Can anyone tell me anything about these things? Specifically, why did Opto stop making them? Did they work? I assume so because they are impossible to find anywhere. Exactly what type of performance increase did they offer?
Any info is greatly appreciated.

1664. For Trade: Icom-2350 for Scanner

Newsgroup: rec.radio.scanner
Date: 1998-10-19 00:00:00 UTC
From: Peaster <peaster@connors.cc.ok.us>

Source record: 141072
Cross-posted to: rec.radio.swap,rec.radio.scanner

I have one IC-2350 dual band mobile in pristine condition complete with manuals and box. This unit has been used as a base mounted to a power supply, it has never seen mobile use. The radio has the out of band mod on UHF and VHF, crossband repeat, and AM receive in the aircraft bands. I'm looking to trade it for a good quality scanner. Unblocked 800 mobile or base, preferably computer controllable... and a discriminator output would be nice. Please reply via E-Mail to peaster@connors.cc.ok.us

Thanks & 73's
Mike Peaster

But you cant dispute digital technology. Count on it replacing analog communication. Anyone deeply involved in the communications field will tell you the same thing. Nextel has had some problems, but speaking strictly for digital technology....it will offer more secure, more clarity and greater range. Like all new technology, there are bugs...but those bugs will be ironed out and newer technology will prevail.....history has shown us that.

I have the feeling the original poster would have been safer to say
'banished' rather than 'banned'. It's sad, tho, no matter how you cut
it- the old Pro 200x series are great mil-air machines, and it just
seems odd that they would knock off coverage of this band- Why?

Source record: 141096
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Of course you should now pick the 8200. Which scanner offers such flexible memory management, numerous scan and search capabilities, lock out memories, a really usable AM antenna, and a slot where you can add options like Tone Squelch (CTCSS), Memory Backup, Tone Eliminator, Speech Invertor etc.? Just add a good rubber duck to replace the stock one, and the 8200 will become a very usable scanner. No other brand currently offers this flexibility. May be next year's Yupiteru, but that is not expected before sept'99.

People...all yee hear thy idiot...he has
some thing to say that is of the
utmost importance to this NG:

"duh"..... he surmises.

What a concept....have you noticed how since the
Check guy is gone how fast this redundant
sack of lice-eggs has run into the foray
and began answering all the questions
from all these "i need to know this"
NGrs...

Can we count the magnanimous amounts
of helpful offerings from this stultified
jerk-on?

What...none? Except how to find Bill Cheek's
e-mail.

Mind-boggling how this miscreant from another bile-pile
comes to the rescue of all who need those answers?

There for the grace of the Mackeral goes zit-puss.

Mind-boggling how this zit-mouth made so much noise
that he was being taken unfair advantage of by the
Cheek Guy in the amounts of postings given to him
to others.

Now one would think that this fecal-fill would have
answered at least 50 percent of those who have asked
for assistance?

Mackeral of Stink, formerly Mackey, can talk the talk,
but he cannot walk the walk....

we have waited and yet he delivers more ass-gas.

I was wondering what the point is to owning a scanner nowadays? Many of the radio systems for public as well as private will go digital (IE, the two way radio on many nextel phones) sometime in the future. there doens't seem to be too bright a future in scanning as technology moves on and analog becomes a thing of the past. Digital has a longer range along with great clarity. It seems logical that as demands get more intense that the conversion to digital will happen. Ham radio itself has been losing ground to the internet, why mess with Ham when you can talk to anyone around the world without the interference and knowing the necessary skills to operate a ham radio. just a though.

I have heard pros and cons on Radio Shack, from people on this newsgroup and others. For those new to the hobby, let me give you a piece of advice. Radio shack has many items that are ideal for scanner lovers and are of a high quality. If you wish to build or add on to your scanner, Radio Shack is a good place to start. You will find parts to help you with antennas, power supply, mobile mounts, etc. Of course there is a negative side to all of this. If you do not know exactly what you want, even then, you will be unhappy with the service. Most of the associates don't have a clue between CB and HAM radio, UHF and VHF, let aloneif they even carry the item or items. Most dealers who do not stock certain parts that you will need, will suggest to go to Radio Shack. In those cases, be sure to get a full description of the part you need and the item#, before you head to your local Radio Shack.

In my opinion, the slogan "Radio Shackï¿½, You've got questions, We've got answers" should be changed to "Rat Shackï¿½, You've got questions, We don't have answers."

1699. AOR AR-8200 trouble

Newsgroup: rec.radio.scanner
Date: 1998-10-19 00:00:00 UTC
From: "Aad@his.best" <AvStrien@usa.net>
Message-ID: <70f6ap$3f9$1@newnews.nl.uu.net>
Source record: 141109
Cross-posted to: nl.radio.scanners,rec.radio.scanner,alt.radio.scanner

Hi y'all,

since a few weeks I own an AOR AR-8200 (S/N 070823, continuous range), but
experience some problems with it, e.g.:

1) Sometimes the MONItor button
does not open the squelch, but
freezes the display for a few seconds
and then shows "PLL error".

2) When scrolling through memory
channels, a scroll backward (down-
or left-arrow), the unit freezes for several
minutes, which is much longer than the
5 or 6 seconds to jump from one bank
across several empty ones to the next
non-emty bank. Eventually, I have to
remove and re-insert batteries before
the scanner responds to whatever key.

3) When the scanner is in power-save
mode, it does sometimes, and sometimes
does not, recognize a key being pressed.
It also responds very sluggishly to key
presses in power save mode. This is much
different from e.g. Yupiteru 7100 and 9000,
iCOM IC-R10 and iCOM IC-R2, which all
come instantly alive with recognition of
the pressed key.

4) More a question: The manual tells about
a soft reset (the CLEAR/POWER-ON cycle,
which I performed several times), but not a
total reset of the machine. How to do that
(maybe it solves my problems listed above)?

5) Various sources state that you can modify
the automatic band plan of the AR-8200.
I found no clue to that in the manual.

6) The machine is absolutely deaf in the
469Mhz area, e.g. when compared to
mentioned Yupi's and iCOM's IC-R10, each
gives full scale S-meter reading, AR-8200
shows 1 short dash and requires almost

fully counterclockwise squelch to open.

Any reactions to above experiences will be greatly appreciated.

Perhaps the problems you describe are related to
the power save logic, i.e., the scanner gets confused
when in low power mode and an event occurs.

That is the problem with peoples perception of HAM radio. All people think is that HAM radio is just for talking. There are many other aspects of HAM radio. Try building your own transmitter or receiver, power amplifiers, go fox hunting, contesting, and many others that you don't get on the internet.

I haven't run Listening Post 1.5 personally, but you are probably experiencing a software bug that happens fairly often. In the programming business it is called a "memory leak". This is caused when the software allocates computer memory for some internal function, like a data structure, but because of the bug, it does not de-allocate that memory when it is finished with the computation. So everytime the software needs to perform that function it just allocates even more memory instead of re-using the freed up memory. Depending on the number of bytes these data structures use you may get hours of use before the crash ... sometimes more ... sometimes less. Your mileage may vary.

Your observations on this program's performance may raise a warning flag for others interested in this software ... or if they are trying to figure out why their computer crashed also.

What other store has more than one model of scanner, or portable radio, or one tenth the electonics selection that Radio Shack has? I live in a small town, and Radio Shack is the only electronics store within driving distance. Our local RS (a franchise) is owned and operated by a couple of retired military communications guys, and they know the merchandise better than anyone I know. We really respect their opinions. Our local store isn't the most fancy RS in the US, but it's the only place I go for all my electronics needs, even when Wal-Mart has some of the same merchandise for a few cents less.

Remember the old 70s slogan: Radio Shack... the electronic playground! That's was my first impression of the store, and I guess I'll always be a RS fan.

>RS fan.

Ron, I would agree with you if my RS here in Charlotte had a couple of ex-military comm guys. However, most of the RS here and in other big cities are staffed by some sort of android that has a fixed glassy stare when you mention anything starting with, "Will this gadget you're selling do _____?"

However, at least here in Charlotte, there are no other choices for parts. The one guy who tried to open a Ham Radio/Electronics parts/Hobby store had to close in three months due to lack of business. He had good prices, but couldn't beat what you can buy via catalog or Internet.

My 2 cents (before taxes)

Jim Donahue

Notice the smoothe slight of had here on the part of Bill Conduit
to change the subject. He does not want to have to answer the question
of his racist remarks on usenet in the past so the changes the
subject to a situation of petty school-yard type name calling.

My apologies. Didn't know they arrived late up there. Must be the dog sleds.
;-)

>Once again the USA dictates what everyone >else in the World can monitor...

Don't forget that Alinko, AOR, ICOM, Sony, Uniden, Yupiteru and others still make scanners with milair capability. As for the US dictating to the rest of the world, I don't think so. After all, you guys can buy a Yupiteru radio, we cannot. You can buy an unblocked Uniden 3000XLT, we cannot. Same goes for most of the other companies.

You can't since you would need the IMEI (phone ID) and Personal Identification Number (PIN) of the phone card that feeds the encryption algorythm. You can crack it with enough material (that is enough money and time) ... good luck!

What, were you out of the country or something? The catalog has been out for a couple of months and this topic has been discussed ad nauseum on this newsgroup.
The milair scanners were dropped 'cause it was too easy to receive cellular images in the 360-390MHz range. You should see some more new RS radios around the end of the year, first of the new year.

I'm trying to decide between these two scanner models. Which is better for the money? I want something that will last and that I will be happy with for years.. Thanks for any input!

1729. FS: LF-UHF monitoring setup

Newsgroup: rec.radio.scanner
Date: 1998-10-19 00:00:00 UTC
From: "David C. Wright" <dcwright@gte.net>
Message-ID: <70e50c$r3i$1@news-1.news.gte.net>
Source record: 141177
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

I have a complete LF-UHF Home/Mobile monitoring setup for sale:

First there is a Radio Shack DX-398 (Sangean ATS909)

This receiver covers 150KHz-30MHz in AM/USB/LSB, plus
the FM Broadcast Band. With over 350 memories, there is
plenty of room to store all of your favorite channels, with
the capability to enter alphanumeric descriptions of each
memory

On the FM band, the DX-398 features the RDS system, now
coming into use throughout the United States.

With this radio is included a carrying case, and both the
AC and DC adapters necessary to run this radio at home or
on the move (both available at extra cost w/a new radio).

For VHF/UHF monitoring I have a Radio Shack PRO-2045 triple-conversion
scanner. This scanner covers the all of the primary Military and normal
scanner bands:

29-54MHz
108-174MHz
216-512MHz
806-1000MHz (less cellular)

This scanner has 200 memories (+10 "monitor" memories) and scans
at 50 channels per second (searches at up to 300 5khz steps per second).
Other features include a programable 2 second delay, WX channels,
WX alert, individual channel attenuation, priority channels, plus
the capability to add a CTCSS board (available from Radio Shack) for
decoding of CTCSS tones.

Included with this radio is the AC and DC adapters necessary to
run this radio on the go or at home.

I'll let both of these radios go for $240 as a set, or $130 apiece,
and I'll even pay shipping (insured) to any place in the US or Canada.

If you are interested drop me a line and I'll discuss payment.

73, all

LP Communications acknowledges a memory leak in pre 1.5.2 versions of
Listening Post. It has been corrected.

Anyone needing a trial extension, please email the registration number
to this address. I will respond with an extension code.

Listening Post doesn't compete with Probe. If you want to use your
old 286, use Probe. If you want to use your brand new Pentium II,
use Listening Post.

Papas (m1956@mail.execpc.com) wrote:

IMHO it's not worth more than $40 or $50 dollars. It's a good little radio but only 16 channels, no search function, and only dual conversion.

Just my opinion.

That is incorrect. The CHP PL Tones change for each division. Southern division (LA county) is 192.8, Central division (central valley) is 146.2, Border division is 162.2, Inland division is 118.8, Coastal division is 167.9, Northern division is 107.2, Valley division is 179.9 and Golden Gate division is 131.8

Mike Derryberry offered some insight:

>The CHP PL Tones change for each division. Southern
>division (LA county) is 192.8, Central division (central valley) is
>146.2, Border division is 162.2, Inland division is 118.8, Coastal
>division is 167.9, Northern division is 107.2, Valley division is 179.9
>and Golden Gate division is 131.8

Thanks Mike. I live in Eastern Ventura County and the CHP Purple Frequency (42.4 B & 42.16 M) used by Ventura is also shared with Santa Ana. Though they are two counties away, the (very busy!) Santa Ana signal booms into our area.

Thanks Again!!

Brian Humphrey

Mike,

You're thinking of the 560XLT with 16 channels. The 590XLT is a clone of the 760XLT with 100 channels, but no 800MHz. $75 would probably be fairer for a 590XLT.

You are never going to get that information by calling the department. They just won't give it to you. And nothing says that I know of says that they do. Also, the officers on the beat might not know the exact frequencies. Try finding out who does the maintenance on their radios. But the frequencies can be found. You can try contacting the FCC, I know you can get the information from them. And many regions have books that you can purchase at ham radio stores that have all the frequencies listed.

I am not certain how things work in New York, but in California and many other states, Housing Authority Police Officers are full peace officers under the law. They may be employed by a private corporation under contract to the city or state of NY. Do these officers weare patches and badges that say private security, public safety, or housing authority police? What about their cars?

Sony SC1 handheld.
Covers everything from 25-1300(no cell). Great preprogrammed seraches like
Police, Fire, Marine, FM radio, VHF TV, UHF TV, Weather, Aircraft and more.
300 channels, great loud clear audio. Super reception.
Also there is the SC1PC which can be programmed via Computer.

The other day I saw a scanner at R/S that I almost bought but didn't. The reason is cause it didn't have Mil Air. Then talking the the R/S sales person he said that R/S will no longer sell Mil Air scanners. He wouldn't say why. But maybe it is time to be paranoid. First Cell Phone scanners were banned, could MilAir be next. Its a very scary thought that the people YOU pay (via tax dollars) want to keep secret EVERYTHING they say.....Sorry I pay their wages, I want to listen to them as well...

Each company likes to use their "own" frequency range. On the latter half though is normally the base frequencies, and in the first half is the handheld frequencies. The handheld freqs usually just give you 1/2 the conversation so if you listen to the base freq's you will here both sides.

Notice that I asked you "What questions have I failed to answer?" yet
you
can not say what I didn't answer! You have proven yourself to be a liar
& a manipulator. Rather than stating the specific matter you are
referring
to, you write 6 lines of mindless gibberish.

How pathetic you are.

You have only demonstrated that you are not true to your words. When
asked what you claim I failed to answer you changed the subject &
when asked about your racist remarks here on usenet you again changed
the subject.

I feel sorry for you.

My previous statement (below) still covers your actions:

O K A Y - Here Ya Go Again:

A N O T H E R R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX. We do not believe this to be a coincidence ....

Is the Sportcat handheld scanner water resistant? Also is it
generally safe to say these days that most police/fire/etc. are using
trunkd systems? I guess what I am trying to ask is, would it
generally be considered smarter to get a trunk tracker, vs a non trunk
tracking unit that covers 800 Mhz? I guess this brings up one other
thought, why is there still an interest in non trunk tracking scanners
anyway, even though most people use trunkd 800 Mhz systems. I am
thinking about getting back into the scanner hobby. Have an accient
by todays standers Bearcat BC-170

Digital in no way, shape, or form has longer range than analog. They are both using fm (frequency modulation) therefore have the same exact radiowave structure in general. Digital and analog have only two differences, number one: a digital radiowave consists of a bunch of alternating 1's and 0's within the radiowave's carrier instead of a voice carrier and number two: you can't hear digital with a scanner, at least at this time, later on down the road maybe we will be able to, just like they finally came out with a trunktracker.

1786. Re: Why do police use codes?

Source record: 140985

>Why use aural brevity codes?
>One main reason, is to limit what the public knows.

It doesn't limit that much, because anyone who listens to a scanner for a week can figure out most of the codes. A couple of months ago I passed by an area and before I had gone half a mile my scanner reported a wreck on the other side of the divided highway. The ambulance on the scene reported a code green, a code yellow and three code reds. Later on I found out that three people had died in the impact and one on the way to the hospital. It didn't take much to figure out what the codes meant.

Around here the police use 10-3 almost interchangeably with 10-4, although the latter is not heard much. Sometimes the police are using a hand mike on a busy highway, and "10-3" is easier to hear than "yes".

OTOH, I've heard county police and small town sheriffs use plain language: "Drug activity being carried on" instead of the city police who use "Possibly engaging in 10-53 activity."

1795. GHFS and SCOPE COMMAND

Newsgroup: rec.radio.scanner
Date: 1998-10-20 00:00:00 UTC
From: PDWK66A@prodigy.com
Message-ID: <70ha2e$5e5c$1@newssvr04-int.news.prodigy.com>
Source record: 140994

October 17, 1998

I read an interesting article in the September 1998 issue of
Monitoring Times (p. 30). It explained that GLOBAL HIGH FREQUECY
SYSTEM (GHFS) operated by the U.S. Air Force is being phased out and its

replacement will be SYSTEM CAPABLE OF PLANNED EXPANSION (SCOPE COMMAND).

The frequencies used are:

kHz:

4724
6712
6739
8968
8992
10780 (back up)
11175
13200
15016 and
17976

The SCOPE COMMAND stations will be putting out over 1000
watts.

I've been monitoring these frequencies for a few days, but
have not heard
much. Has anyone on the West Coast been checking them, and
if so, what
have you heard?

As far as Ham Radio goes, there is still a fascination and thrill of designing your station to pick up far away countries and learning which bands and what times to use to get communications through to thise locations. Not only that, ham radio offers you a randomness at times that can be very exciting when you come accross that *surprise* DX station that was just sitting out there in the static, and you happen to be the first person you heard in the U.S.A. (This of course causing a wild stampede of other operators trying to reach the same station in what we hams call a "pile-up".

My other point is that there is a certain satisfaction that comes from building your station with the highest quality standards, 1:1 match on your antenna, good sensitive receiver, possibly DSP, and good Low-Loss coax, that allows you to get through the pile-up and "work" the DX station. There is a pride in building and maintaining either a top notch scanning set up, shortwave listening, or a ham radio station.

I think a lot of you get where I am coming from. It's the part of you that you put into your station. It's an extension of yourself. If you really want to talk to someone *that* bad, just call them on the phone. The telephone has been around for a while.

Just have your little GEO satellite sitting up there waiting for you to transmit. There are a lot of solutions out there, but few can afford them.

The standard way on most older scanners is to swap out the cpu clock xtal
with one of a higher frequency-of course, there is a limit...put it too
high, and the radio will not function properly.
Within reason, though, it does work...BUT...
One "gotcha"-the delay function will be shortened too-this can be a
hassle.

1812. Re: GHFS and SCOPE COMMAND

Newsgroup: rec.radio.scanner
Date: 1998-10-20 00:00:00 UTC
From: jtward01@aol.com.nospam
Message-ID: <19981020084327.10534.00002990@ng99.aol.com>
Source record: 141011

>that GLOBAL HIGH FREQUECY
>SYSTEM (GHFS) operated by the U.S. Air Force is being phased out and its
replacement will be SYSTEM CAPABLE OF PLANNED EXPANSION (SCOPE COMMAND).

This isn't quite correct. The GHFS will be the operators of the new Scope
Command equipment, although it will be much more highly automated than the
current system. The new system feature Automatic Link Establishment (ALE) which
will allow an aircraft or vessel to automatically connect with his party
without the GHFS operator having to manually place the telephone call/phone
patch. This automation is allowing the GHFS to close some stations.

>The frequencies used are:

> kHz:
> 4724
> 6712
> 6739
> 8968
> 8992
>10780 (back up)
>11175
>13200
>15016 and
>17976
>

These are the same primary freqs. that are in use today by the GHFS
system. 11.175MHz is the busiest, followed by 15.016, 8.992 and 6.739, all USB.
You should have no problem copying traffic on 11.175 during the day as it
is almost constantly in use. If you aren't hearing anything then you have an
equipment problem.
If you are interested in monitoring military communications then you
should join MilCom, the military monitoring e-mail listserver.

To join send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few
hours.
To post a message to the other members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your
location
and requesting frequency help and you should get some answers.

The statement is plainly printed in the RS catalogue, all the scanners
that were in last years catalogue that recieved mil UHF/AM air have
been discountinued... They have nothing at all that now covers the
200-400 Mhz range

have a look at www://qth.net and have a look at the PCR1000 archieve there and subscribe.

In my opinion it`s one of the best price-worth receiver. You will NOT call it a specialist for scanning although it has some scanning-functions. By ICOM its called a communications-receiver. Performance on VHF is a little bit better as the unmodified Sony ICF2001D /2010. A modified 2001D with better IF-filters maybe better in some cases.
For receiving (mainly) on shortwave (so do I) the UT106 DSP-unit is highly recommended.
A big fault by ICOM are the 450khz IF-filters. There are NONE better available around the whole world. I am now trying to get a pair of new 450 khz-filters with 2.8khz bandwidth from my ICOM-dealer as repair-parts. I want to switch them behind the other with an amplifier-circuit to get a better shapefactor.
On VHF it has an exellent performance. The Packet-Radio-connector is the DISCRIMINATOR-output and very usefull for some digital decodings.
But- forget the antenne that comes with the PCR1000.
A discone OUTSIDE the house with UHF-whip is for shure the best you can do to this receiver. With longer antennas on UHF it will overload. Even with that short antenna an preselector like the YAESU FRT 7700 is very usefull.

best regards
odo

I really hate to ask this type of opinion based question, but I've read all the reviews I can get my hands on and still can't decide. Can owners of the MVT9000 and the AR8200 let me know their impressions of each. Strengths and weaknesses. If anyone has personally owned both, those comparisons and comments would be greatly appreciated. I'm growing tired of trying to decide and think I'll order one or the other soon.

Thanks.
John

You are making the rather rash assumption that these guys are licensed!

A substantial number of radio users, including decent sized fleets, have no license. They merely purchased their radios and started talking on them.

How many outfits peddling radios have any knowledge of licensing, let alone perform licensing services for their customers? Nearly zero.

If the cats you are looking at are not licensed, then obviously they would not show up on any database. And neither would they cooperate on sharing their frequencies with you, which most likely no one in the company knows where they are operating.

And no, the FCC does not care and will not do anything.

I'll accept that RS may have temporarily eliminated the mil-air band from its scanners because of the cellular image issue ... but that's the only issue. I really don't think the government really cares too much about people listening to refueling operations. When they want to, the military can secure their comms. Pretty effectively.

I assume you plugged the earphone jack into your soundcard mic input:)

But seriously, it is most likely the audio cable is forming a path for
the vast amount of radio energy buzing around in your pc. A couple of
things to try:

1) Use a quality shielded patch cable
2) Buy a big ferrite choke like a Radioshack 273-104 or 273-105 and
wind your cable around it as much as will fit. Play with the location
on the cable for best results.
3) Is the unit in question battery powered? If so does running it from
batteries fix it? It may be ground loop. If so try using a ground loop
isolator (ie audio transformer) in the line.

..nobody's "banned" the military airband, It's just not as popular as gettin' cellphone images and such. In fact the first popular scanners to have the 200-400mhz mil airband was the BC2500, BC890 BC8000, BC3000 and then the AOR wide range "monitors" and then the Yupie.... ad infinatum,,,,just cause RS had a couple that really didn't make a profit and they stopped 'em, don't start rumors that the band is banned.............after all wasn't it RS that did a recall for the FCC when it was hinted that you could reactivate the cellphone freqs eall easy.........and in another 5 or 10 years the mil air band will be commercial anyway....the way the FCC is auctioning off the airwaves....

The Baltimore Study is **horrendously** flawed. Baltimore is certainly welcome to do as they please, but one should not take the "facts" from that embarrassing study to the table when deciding the alternative call processing needs of a community.

The Baltimore Study was as hokey as a "Judy Garland/Mickey Rooney" movie. Yep, it seemed like they could just "put on a show" and all the worlds troubles melted away.

Darn shame to be sure. Nice City, Nice Police Department. That doesn't however, make up for the farce of a "3-1-1" study.

When putting batteries with the on battery power tester make
sure they and turned to the side and nut up or down in the holder.
Seems a lot of scanners that have a slide in battery pack were
designed for regular batteries and did not take into account the extra
space the tester takes up.
I have a Pro-43 and with batteries that don't have the tester
on them the pack will drop out but with the tester batteries and the
tester showing it stays in there, turn them sideways and it will drop
out.

Message-ID: <70jm97dsp1@nnrp1.dejanews.com>
Source record: 140889

Rick,

I don't know what your knowledge level is so I'll try to make this as easy as possible. Excuse me if I use incorrect terminology as my own knowledge level is limited.

There should be a long metal pin sticking out of your circuit board that is directly connected to the correct pin on your discriminator chip. I do not know for sure how it is labeled in your 2006 as my machine is a 2022 but I noticed that someone else responded to your newsgroup posting and said it was labeled as TP-2. Take a 4.7 micro Farad (approx) Tantalum Capacitor (polarized, one wire positive, one negative) and carefully solder the positive leg onto the tall pin. The negative leg should be connected to the wire that will go to your discriminator output connection. You can tell the positive from the negative legs by looking for a dark stripe down one side of the capacitor. It often terminates in an arrow head shape that is pointing to the negative wire at the bottom of the capacitor. You can buy this capacitor at any Radio Shack, just print out this e-mail and bring it with you if you don't know how to describe what you need. To recognize a typical tantalum capacitor of the correct capacity, look for grey or blue cylindrical objects about 1/4 inch tall with two metal wires sticking out of the bottom. You can often salvage the parts you need from old, useless, electronic devices in case you don't want to go down to Radio Shack.

Now, once you have the capacitor soldered onto the tall pin, you need to connect a shielded wire to the capacitor. A typical item that you can use to salvage thin, sheilded wire from is miniature stereo headphones that come with Sony Walkman's and similar products. Most headphones of this size have a left and right wire, each wire having a core wire coated with plastic which is then wrapped in copper wire shielding which is then coated with the final layer of plastic/rubber. Cut a suitable length of this wire for your project. Solder the center wire to the negative leg of the capacitor and the copper shielding wire to any chassis ground. To check to see if you have a chassis ground connection, use an ohm meter. Put one lead of the ohm meter on the metal chassis and the other lead on convieneint and promising looking point of the circuit board. On my 2022, I found a rectagular metal box nearby the discriminator output pin and soldered my shielding wire to that (it had zero resistance to the chassis).

Now, take the other end of this wire and attach it to a small phono jack (the type of jack you plug the walkman headphones into). You can purchase a 3.5 mm phono jack from Radio shack or salvage one from old gear you may have laying around. Solder the center wire to the lead of the jack that connects up to the tip of any inserted 3.5 mm plug. Solder the wire shielding to the lead of the 3.5 mm receptacle that connects to the base of any inserted

headphone style 3.5 mm plug. Drill a hole in the back of your scanner to install the 3.5 mm connector in. You now have a convenient way to connect peripheral devices to your discriminator output.

dave archer wrote:
>
> Has anybody ever heard of a UFO or strange lights being reported on
> ,over the scanner
>
> born to be wild (thats my theme)

here is an example:
+++

I wish to report a bizarre crime situation in the Maple
Heights, Ohio area (a suburb of Cleveland, USA) using a
form of radiation-based mind control. A criminal gang is
entrapping and torturing victims with radiation
bombardment (deliberately trying to produce brain
injuries), electronic rape, transmission of rabid screech
"voices" (sound simulation being possible),
round-the-clock force-fed verbal communications, and
drug effects (transferred from drug users who are
apparently on amphetamines, coke, etc.--at intentionally
uncomfortable levels in order to stress victims into
nervous breakdowns). Victims are kept debilitated with
chronic radiation poisoning which is at times similar in
potency to nerve- (or minimally tear-) gas in terms of
being a hazardous biological agent, except that the effects
are more directable to the specific target. The levels are
periodically upped to that point whenever the predators
deem it necessary to keep their prey in thrall, or to achieve
a desired end. Although, torture could be described as
intermittent, communication is continuous. This is in
effect electronic telepathy--being used for nothing but
deleterious purposes, however (for the implementation of
torture). The signal can be transmitted to victims from
incredible distances with accuracy, it is impossible to
evade, and there is a large army of persons engaged in the
stalking (7 days, 24 hours--with unbelievable tenacity).
There is probable usage of satellite tracking, augmented
by ground-based weapons, making escape difficult.
(Surmising the means is theoretical, based on prolonged
experience.) I have been followed without relent for 25
years now, around the clock, by stalkers who never stop
preying on their victim. They are sadists who do all in
their power to inflict suffering on victims, in a way that is
senseless--constantly engaging in psychological and
physical abuse. They latch on to a victim and never

thereafter permit prey to experience full consciousness, denying freedom of thought and basic human rights. Packs of thugs gang up on helpless individuals with laser weapons and try to administer brain damage, to knock the victim's brains out, so to speak. An army of them surround the victim from hidden locations, from time to time generating shrieking effects and hyped-up nervous states while so doing as a means of creating mental distress. I reported the abuses in the 1970's. There was a phony Congressional investigation, a little bit of press flurry about illegal CIA activity which never divulged the main facts--camouflaging the mind control as a drug operation instead of revealing the technological bases of the radiation-based mind control--then a smokescreen put up through U.S. news media, which seem to have become pawns of a de facto dictatorship. The public went back into a quiescent sleep while the perpetrators bore down more cruelly on helpless victims.

Some of the transmissions are suspected of being via satellite. In fact, the evidence to this effect is for me overwhelming. The roof of a building (i.e. your house) can be targeted, and there is very little scattering to the outside, creating the apparent impression that nothing is happening (outside). Meanwhile a humongous pulsating signal is being generated inside, creating standing waves through directed-beam transmissions. However, the victim need not be stationary to receive. The signal goes for miles. Being stationary makes it easier to deliver pain and to concentrate harassment, though.

The so-called Star Wars program could be a dangerous offensive weapons program which is a tool of a virtual dictatorship. People who know too much and are willing to talk are stalked with the mind control by torturers until they suffer ruin--suicides, destitution, confinement to mental institutions, diagnoses of fake schizophrenia, which is degrading character assassination--even subjected to illegal psychosurgery after being driven into provoked rages with torture from which they could not escape. The U.S. press appears to have complicity in maintaining secrecy--conferring absolute power on the vicious clique monopolizing this technology. No defenses are ever developed for detection by an unwitting population which is never informed of any capabilities of it. The ability to stalk press people with the mind control is part of the reason for the successful secrecy, but there is also a certain amount of corruption on the part of the establishment, which is kept comfortable as long as it plays along. The technocracy is careful to (overtly) victimize only the weakest and most helpless of prey for target practice, to cover its tracks. I know I am

surrounded by an army of these persons, with beams coming from multiple directions. I have been anything but silent to local police, yet I have never seen any discipline of the criminals. Some of the predators will pose as benevolent (as therapists, well-wishers, religionists, etc.) until they think they are not being observed, and then they will do a 180 degree turn and start their extortion and terrorization. There has been no halt to their operations in 25 years. I have registered complaint after complaint after complaint with the local police department. The one person I have been able to pinpoint as being somehow (maybe indirectly--through some kind of guilt by association) connected with the technology is a very improbable type--a Mr. John Wavrzacz at 14101 Rockside Rd., Maple Heights, Ohio. Evidence was an uncanny ability to know about events he had no means of being privy to other than some kind of clairvoyance. The son of neighbor Carol Tipton (formerly Skocdopole), 5337 E. 141 St., also needs investigation. Although he appears outwardly decent, Al Kovach, the person who purchased my home at 5333 E. 141 St. and from whom I rent, is also a mystery figure. He supposedly lives near Fleet Ave. in Cleveland and claims to be an electrician. I can't afford to leave any stones unturned.

Another fact: In the past I distributed a report with a Feb. 7, 1976 Cleveland Plain Dealer newsclipping attached entitled "Soviets said to spy with perilous rays". There was a lot of ensuing reference in the media to CIA mind control about that time. After I let out Wavrzacz's name in 1996, some terrorists hit me with an incredible radiation blast akin in its effects to tear gas. This stuff causes respiratory passages to swell until near-suffocation results. Without antihistamines, the ability to breath is threatened. In their communications perpetrators make reference to some kind of "gang" and "family" membership. There is never a police bust of criminal perpetrators in this area. No complaints to any authority are ever to any avail. Activity is occurring in the E. 141 St.-Granger Rd. section of Maple Heights, Ohio. At least that is the target area (almost certain use of overhead satellite technology augmented by ground-based weapons--this is theory, it is difficult for me to ascertain the exact means). I would like to re-emphasize the almost certain utilization of satellites to relay some signals. What else would account for the signal being very strong inside a building, then apparently much weaker on its entire periphery? Also, nuclear reactions may be involved, judging from the often very hazardous nature of the radiation. Nuclear weapons in space? Nuclear terrorists? There are upsurges in torture activity correlating with breaks in the

academic calendar--Spring break being the worst time of the year. This leads me to suspect participation of academics in the crimes. Local colleges--Case Western Reserve University and Cleveland State University, both in Cleveland--could be suspect. Possibly students lured into collaboration by criminal professors, or some such scenario. How American students could be lured into supporting anything so flagrantly antidemocratic I couldn't begin to guess. I am also considering local hospitals as being possible sites of activity. There are two Veterans hospitals in the area--in Brecksville and Cleveland, plus a branch of NASA. I was in Marymount Hospital in Garfield Heights, Ohio, a couple of times. It is the only hospital in which I have ever undergone any surgical procedures (twice).

Although anyone who had experienced this phenomenon would think some sort of implant for tracking and reception necessary, a CAT scan and x-rays of my brain back in 1981 by Radiologic Medical Imaging Associates in Mayfield Hts., Ohio (referral from a Dr. Grant Heller in Beachwood,Ohio) did not turn any up, according to radiologists who reviewed them.

There are indications from his behavior that my brother Bill was also a previous victim. He is today very ill, displaying symptoms of long-term abuse.

The American public can never acquire defenses, regulation, pertinent laws, or restriction so long as the secrets are kept. I need help in tracking to source. Victims undergoing the most heart-rending violations are simply brushed off as lunatics, ignored, scoffed at--and it is an affront to human decency and dignity. The reason secrecy has been maintained this long (over twenty documented years) is the promotion of a vicious reign of terror against any resistance or dissent. Anyone who knows anything is stalked and tortured until they crumble. The clique in power are very cocky and obnoxious overlords, in the process of transforming the democracy into a farce. The group which has victimized me is little more than a ring of psychotic deviates who molest innocents for sadistic kicks--deriving some kind of insane satisfaction from intimidating helpless prey for spite. They have no consciences or internal limits, and brag about their amorality. I believe they have been picking up women (and boys) for sexual reasons, afterwards driving them insane. They juice up on dope while they hold their prey captive. While they attempt to damage the victims' brains, they spew Nazi philosophy at them.
I sometimes wonder if secret police (military) support exists--a suspicion derived from the fact that activities are never stopped. These persons, who are terrorists, never

face arrest, intimidating me without end. In at least one area of the country (New York City) I have evidence of coordination with mental health authorities to entrap victims into insane asylums. This is of course after deliberately driving them crazy. What I have depicted is a brutal denial of the rights to life, liberty, the pursuit of happiness, and security in their homes which are supposedly guaranteed to law-abiding Americans. The thirteenth amendment prohibition against slavery is also violated.

If the technology were in the right hands (instead of the very wrong ones who hold it now), there might be a questionable need to expose it. However, victims like myself have been subjected to cruel and unusual punishments. Like 25 years of constant telemetric tracking combined with efforts to induce psychological breakdown and persistent torture. Persons like my clueless brother Bill subjected to what looks like illegal experimentation with extremely destructive effects--virtual loss of life which is the result of prolonged torture (and possibly psychosurgery). Naivete and weakness make the target all the more tempting, apparently.

Some of the perpetrators want to know if the human being can be completely robotized with psychological (and physical) breakdown methods, and they never know when to stop. Their big dream is to produce a mindless golem. This is not expanding human potential in a positive way.

The technology is dangerous, yes. But there is no excuse for the kind of abuse which has gone on. People's lives have been destroyed. The most innocent kinds of people too. The need for secrecy is not sufficient justification. Unbefitting Civilized Man, if such could be said to exist.

Closing with the valuable words of Sir Winston Churchill:
"Still if you will not fight for the right when you can easily win without bloodshed, if you will not fight when your victory will be sure and not so costly, you may come to the moment when you will have to fight with all the odds against you and only a precarious chance for survival. There may be a worse case. You may have to fight when there is no chance of victory, because it is better to perish than to live as slaves."

I totally agree with Jason on this. I have been working only part-time for our local 911 center about 4 months now and it has really opened my eyes as to how many uncaring and inconsiderate people we have in our county!
I don't know how many times I've answered a 911 call only to be asked for another phone number or something else just as stupid!
One of the biggest excuses we hear as to why they do this is that 911 is much easier to remember than a seven digit number!!! Get REAL folks!!

OK folks...the genius of the stuporific one...

I told him that I had asked him questions in a prior
post which he now refuses to answer behind his little
game...pretending they dont' exist...yet. NO, YET.

Come on you miserable miscreant of
banal bastardization, go back and read
and answer what was asked of you to do.

you say gibberish...i and others say'
cowardishness is you.

Mackeral...you are nothing more than a coward. For you
to ahve met bill cheeks or me would be the
most "horrifice' time of your life.

but you cannot do that. Cowards as you
just try to "revert" to what you are all about
when not in training on your multi-decked

toilet: to see the many holes in your
personality and life and your favorite
jerking tool.

>How pathetic you are.
>
No mackeral...the mirror.

You are a legend in your own mind.

The mirror.

>You have only demonstrated that you are not true to your words. When
>asked what you claim I failed to answer you changed the subject &
>when asked about your racist remarks here on usenet you again changed
>the subject.
>

No, all you have shown the NG is that you have no
word...u never did. but i gave you a chance
to show it. No one changed the subject.

Go back and get the questions and answer them.

Racist remarks: you got some imagination fellah.
Amazing what living in a hydro-toilet seat and
surroundings can do to you.

the issue was " answer the questions" not about
your deranged sense of fecundity.

>I feel sorry for you.
>
Oh gosh...from the lips of a "banal-sucker"

How do you accomplish that? Do you have the
power to say you can feel anything that does
not begin and end with "I"...?

My previous statement (below) still covers your actions:
>> >> >Notice the smoothe slight of had here on the part of Bill
Conduit
>> >> >to change the subject. He does not want to have to answer the
>> question
>> >> >of his racist remarks on usenet in the past so the changes the
>> subject

YOu are making things up to suit your duress. We all know
this about you. so you continue. Note: he has never answered
qustions put to him as to "what letters did he write" to
that ass-h on san.rr.com...the stupid ISPer.

what did you say about Bill Cheek? And don't give us
that bs about "propriety" ... you know not what they means

and have no actual proof you understand the meaning of
"character" .....

it's your words...you share with us so we can see the
dimentia you have within you as we get to see what lies
you made up about the Cheek guy....

you have nothing to lose because you are a loser already.

Come on mackeral of great stink....prove us wrong by
posting what you said and answer questions to you by me.

that is the only issue here. so put up or just shut up
forever.

bill conduit

first find out what the
frequencies are you want to listen to?

no...yes

find a scanner that matches this need
and seek it out...

the TT is for specialized listening to
specialized Motorolla system in place.

or you can buy it now...use it for
aviation and then if trunked system exits
in your area on motorolla...you are in for
a disappointment:

you can only listen to one

wither aviation or trunktracking channels

you cannot do both.

just one...

or buy two...

Jim,

Contact AOR USA at 310-787-8615 or check out their web site at www.AORUSA.com 'cause they make a filter specifically designed to eliminate VHF airband intermod. Now, they've only just opened an office here, and they don't have everything in stock, yet, but they will have soon. I think the filter sells for about $25 or so, based on prices I've seen for it overseas.

Hi! I have an Icom R-100 mobile scanner/receiver for sale; some specs:

100 kHz - 1856 MHz *continuous*, 800 MHz unblocked
AM, FM, WFM
100 Memories
20 Scan Edge Memories
AFC
Auto Noise Limiter
Keyboard Entry

Dimensions: 5.9 (W), 2.0 (H), 7.1 (D), 3.1 lb

The radio works perfectly, and is a cosmetic 6-7/10 (just the normal wear for a mobile radio). It includes the manual, mounting bracket, power cord, and factory box.

$400, and I'll meet you somewhere in the Arlington Heights/Woodridge, IL area for delivery, or buyer pays shipping. No trades, please.

Please drop me a note if interested.

Thank you,

Paul WD8DKY

1877. ICOM Shopping "Trip"

Newsgroup: rec.radio.scanner
Date: 1998-10-21 00:00:00 UTC
From: malexder@aol.com
Message-ID: <19981021093545.02336.00004681@ng65.aol.com>
Source record: 140908

I just bought an ICOM from Burghardt Amateur Radio (www.burghardt-amateur.com). I'd never even heard of them before-got their URL off the ICOM web site. I sent them an e-mail asking whether the scanner was in stock and what their price was; I got a reply back within an hour; a follow-up e-mail was answered even quicker. When I called to place my order, the president of the company took my order, answered some additional questions and overall was extremely pleasant.

I sent the same e-mail to Lentini, and got a response several hours later. But Burghardt's price on the scaner was $60 lower (Lentini had the highest price of about 12 places I checked); also Burghardt's price on a software/cable package was $18 less than I had seen anywhere else.

I sent e-mails to Ham Station, Amateur Electronic Supply, Ham Radio Outlet, Universal Radio, Telecom-GMBH and Thiecom (both in Germany). I received a personal reply from Universal and an automated e-mail response from Ham Radio Outlet. The rest never bothered to give me a reply or a price. That's actually pretty amazing, considering that I was looking to buy an expensive scanner.

Anyway, try Burghardt the next time you're looking to buy a scanner. I won't say they're the cheapest around, even though I happened to get a lower price on the items that I was looking for.

Also, keep in mind that prices listed on web sites often are not the actual selling prices. Many times, the dealers have neglected to update their prices. On Universal's site, for example, their price for the scanner was $200 higher than anyone else but when I asked about the price, it was actually competitive.

I know the feeling all to well. I live in Bakersfield and the CHP here is on the Brown (42.50/42.82). LA CHP West Valley/Altedena also uses the Brown. At my house I can Hear the loud and clear. I also hear San Bernardino on the Copper which is the same frequency (dispatch) as the Turquoise also used here in Kern County (Buttonwillow I-5). I use a Uniden BC760 with a CTCSS tone board to weed out the unwanted dispatches, otherwise it can get very confusing. :)

I totally agree with Jason on this. I have been working only part-time for our local 911 center about 4 months now and it has really opened my eyes as to how many uncaring and inconsiderate people we have in our county!
I don't know how many times I've answered a 911 call only to be asked for another phone number or something else just as stupid!
One of the biggest excuses we hear as to why they do this is that 911 is much easier to remember than a seven digit number!!! Get REAL folks!!

If they have obtained a license from the FCC to operate radio
transmitters, everything on the license is a matter of public record.

That includes the official name of the organization operating the
radios, the location(s) of transmitter site(s), the name and address
of the station trustee (if different from the owner), frequency,
callsign, authorized power, etc.

The Baltimore Study is **horrendously** flawed. Baltimore is certainly welcome to do as they please, but one should not take the "facts" from that embarrassing study to the table when deciding the alternative call processing needs of a community.

The Baltimore Study was as hokey as a "Judy Garland/Mickey Rooney" movie. Yep, it seemed like they could just "put on a show" and all the worlds troubles melted away.

Darn shame to be sure. Nice City, Nice Police Department. That doesn't however, make up for the farce of a "3-1-1" study.

Source record: 140784

I use the Q-7A with the cheap Radio Shack expandable antenna with a center coil. This may take a little more space up than a little SMA whip, but the performance gain is astounding. I find it to be MORE sensitive than the Yupiteru 7100, Relm HS200, or AOR8000 I have previously owned on the 30 to 50mhz region. You may want to try a different antenna because your results are definitely not like mine.

1904. Help in IDing data transmissions?

Newsgroup: rec.radio.scanner
Date: 1998-10-22 00:00:00 UTC
From: Keith David Tyler <romulus@ccs.neu.edu>
Message-ID: <70njms$bj8$1@camelot.ccs.neu.edu>
Source record: 140785

Could someone help me ID a couple of data transmissions as to format?
There are two distinct types of data transmissions that I commonly pick
up with my scanner. I've made WAV recordings of both.

The first I believe to be a steady-stream transmission format. I believe
it is being used by taxi companies for sending data to in-car data screens
(sort of like an MDT for a taxicab). According to a reliable freq list for
my area, the freq is used by a cab company who uses such devices in their
cars. It sounds sort of like WX-sat but using a different carrier
frequency.
I have a .wav at http://www.shore.net/~romulus/scan/452.100.wav

The second is typically a short (30 sec) burst that sounds like a data
handshake. I was told by someone that it was related to satellite control
signals (but I doubt this). During midday during the summer I would find
signals like this ocurring very frequently and interfering with other
transmissions. It sounds short as if it might be pager data but the sound
does not fit any description of POCSAG that I have found online.
This is at http://www.shore.net/~romulus/scan/454.450.wav

I would appreciate giving me any hints on these transmissions. Also, if
you know of any software that can decode these formats in audio, like
wxsat does, that would be great.

Thanks,

Kdt

DOS Control Program for Icom PCR-1000. You don't need an expensive Windoze computer to control your PCR-1000. Any old laptop and most palmtops will do, and with many more features than the Windoze program that comes with the radio.

==========

New version available!

All existing bugs corrected and channel activity detect algorithm improved.

New features added:

- Priority scan with programmable interval
- Individual channel resume-scan delay
- COM2 - COM4 support
- Selectable suppression of internal bank
- Full control of bank enable at startup
- Banks can be loaded from any drives and/or directories
- Unlimited number of bank sets
- Manual frequency, mode & bandwidth entry
- EEPROM read, verify and write

That's about it for scanning. Search is next. Still the best bargain available for under 10K bytes.

Thanks Mike,
The URL I had before didn't have the "pub" in it and I couldn't find the book on that site. I found it now and have ordered it.
Thanks for the information

Hi All

I've got a problem with my 2004 - the 1,4,7 keys (suddenly) don't work - can anyone supply me with the details on how to fix it ??

Personal replys please - as i don't surf in here often!

Thanks

1909. Motorola Talk-About & RS Questions

Newsgroup: rec.radio.scanner
Date: 1998-10-22 00:00:00 UTC
From: Matthew Streger <nospam@nospam.com>
Message-ID: <70nrq4$4to$1@camel21.mindspring.com>
Source record: 140790

Two questions for the group:

1) I have the list of FRS frequencies, and I assume that the 14 FRS frequencies are the same as the Motorola Talk-About uses. Does anyone know the user-selectable PL's used in these radios?

2) Radio Shack has an equivalent to the Talk-About radios on a single channel. There are two small switches inside the radio. Do these switches control a PL-like function? If so, does anyone know what PL's the switches indicate?

I hope these questions haven't already been answered ad-nauseum on the group already. Please reply by e-mail to medic1529@mindspring.com, as I do not get to check this group regularly. Thanks for your help.

Some manufacturers (e.g., Uniden) haven't been specifying the IFs
nor image rejection.

I attempt to discover the IFs and measure the image rejection
when I test a receiver in Monitoring Times.

Image rejection, like sensitivity, varies with frequency.
There's a question of how you want to specify the image
rejection; at one frequency? one frequency per band?
worst case?

I usually measure the image rejection in two places:
near 155 MHz and at a point (if any) where cellular images could
be a problem.

I could measure the image rejection across the entire spectrum,
as I usually do with sensitivity, but that would take time.

Cable TV egress? Cable (not over the air) channels 21 & 22 are in that range.
Poor shielding on the cable may cause it.

Is an unmodified Pro-34 worth $50? It's apparently in good shape, includes the manual, antenna, rechargeable batteries and AC adapter.

Any thoughts would be appreciated.

Thanks.

Dale

1915. VX-1R missing frequencies?

Newsgroup: rec.radio.scanner
Date: 1998-10-22 00:00:00 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <70o3rl$r1m@news.or.intel.com>
Source record: 140796

I purchased a Yeasu VX-1R last week for traveling and while in Atlanta and Chicago trying to program in their trunked frequencies, I noticed that the ADMS software and the radio itself would not allow frequencies like 866.xxx. It would appear that in order to block the cellular range, they chopped off 2 MHz. below that range!!! Am I missing something? (mine is the latest firmware and cannot be modified for cellular).

Cellular Telephone

Chs Freqs (base) System Use
991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data

334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital). |
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

450 MHz Air-Ground Mobile Phones

Below are the freuqncies for the 400MHz air-to-ground telephones found in privat
e Aircraft. The transmissions on these frequencies are FM. Cities throughout t
he country have been allocated anywhere from one to three of the channels listed
below. Those channel alllocations are listed below. Keep in mind that all cha
nnels may not be in use in a particular area.

When monitoring these frequencies, be aware that the ground stations repeat the
airborne half of the converstion, but transmit an annoying continuous tone when
not in use. If you are within range of the ground station and want to avoid the
tones but hear both sides of calls when they're made, you can do so by programm
ing both frequencies into your scanner. Lock out the ground frequencies when sc
anning, and when a call is received from a plane, manually step up to the ground
frequency to hear both sides. If you are out of range of the ground station, y
ou will only be able to hear the plane side of the conversation. This service i
s used on private aircraft.

800 MHz Air to Ground Telephone

These are the frequencies used by the airlines for air-ground phones. The trans missions on these frequencies are AM, with the channels spaced 6 kHz apart. The ten blocks of 29 have been assigned to various areas of the country, and cities having the same block are separated by at least 300 miles. The allocations are listed below. The ground frequencies do not echo the airborne half of the conv ersation.

Block 1, Channels 1-29 (Ground) 850.8055 - 850.9735
Block 1, Channels 1-29 (Plane) 895.8055 - 895.9735
Block 2, Channels 1-29 (Ground) 850.6055 - 850.7735
Block 2, Channels 1-29 (Plane) 895.6055 - 895.7735
Block 3, Channels 1-29 (Ground) 850.4055 - 850.5735
Block 3, Channels 1-29 (Plane) 895.4055 - 895.5735
Block 4, Channels 1-29 (Ground) 850.2055 - 850.3735
Block 4, Channels 1-29 (Plane) 895.2055 - 895.3735

BUGGING FREQUENCIES

There has been an increase in the use for using wireless transmitters not only by Law Enforcement Agencies but for private gain of information. Big companies bug there competition to find out about new products and such, husbands/wives bug each other to find out if the other is having an affair, and so on. Wireless transmitters are not only used for these purposes you can find them in use by your local preacher at church, or entertainers while on stage and so forth. Put these freq's in your scanner and drive around and see what comes up.

40.22 ---- known active in Las Vegas

According to the Pop Com July 89 article, there has been an increase in the use of Cellular Phones for the purpose of surveillance, mostly by Federal Agencies and larger Police Depts.

I would like to thank the Medic from Las Vegas and GEnieScan for there contributions to this file.
92 Update Credits: I would like to thank Bob Parnass, AJ9S of AT&T Bell Lab's 708-979-5414 for his great accomplishment of
listing specific Comtek & Telex Channels & known hits.

Police and Govt. Agencies can use just about any frequency for Surveillance purposes, please remember not to limit your scanning to the freq's listed above.. Police/Govt. Agencies can use any frequency under 2 watts without even notifying the FCC. They can also use any freq. assigned to there State, including State/Local Govt. Freq's, Business Freq's, etc..

A few ideas: Drive around with these freqs in your scanner, bugs use low wattage so you will have to be pretty close to monitor. Another idea is the next time a concert comes to town, get as close as you can to the arena and search through these bands, this could also be done at stage shows, etc. Let me know how ya do.

You should also purchase an OptoElectronics Frequency Counter, there are many models to pick from, these units can actually pickup these Mic's if you are close enough.. OptoElectronics 1-800-327-5912

Frequencies used by wireless microphones, transmitters, bugging devices, surveillance etc.
These frequencies have been compiled by a few sources, Monitoring Times, Popular Communications and friends.

They are some of the known frequencies in use by transmitters used by
entertainers or in law enforcement applications.
A good idea to do is put these in your scanner and do a random scan around
your house, or go driving around your town and see what comes up.

by Topol KWV8BP

Common search bands: 88 - 108 Mhz. 174 - 216 Mhz.
72 - 76 Mhz. 455.0 Mhz.
Also be sure to check 49 - 50 Mhz.
for baby coms which may
have been converted to be
a wireless listening device.

Known freqencies used by
entertaineers and for surveillance 30.84 33.12 33.14 33.40

UPDATED BUGGING FREQS FROM
THE MEDIC IN LAS VEGAS---------- 154.695 154.995
BUMBER BEEPER---------- 40.220

Possibles of using these and
doing search ranges could show
some interesting results, one
example would to be park near a
conert for one and do an extensive
search, you would eventually lock
onto the frequencies used by the band
which are playing, Hmmm. Then again
you could always come across a bugged
subject.
All frequencies are in Mhz.
Some of the cheaper brands that are
being sold today, such as radio shacks,
and the ones made for camcorders are
being used by private sources bugging
neighbors, etc. These are easy to covert
on telephones , rooms, etc. All bugging or
mics for entertainment use very low wattage,
you will have to be close to the source.

In response to a lot of requests, here are the frequencies
for the 3 AT&T High Sea's Phone Service Stations; KMI, WOM, and
WOO, and WLO Mobile Marine Radio. These are the only four stations
in the United State's for high sea's ship to shore radiotelephone
service. These are several smaller "coastal" stations, that do
provide the same service only in a smaller service range.

You can call me picky, but I decided to pass on it because it was published
in 1996 and so many agencies are moving to trunked systems. I ordered the
Spectrum CD ROM instead. However, I do agree that it is a fantastic book.
I bought the first addition many years ago and still have it lying around.

Th 890XLT can be easily be overloaded so I would not get an antenna with too much gain. A discone antenna would probably suit you fine. You can get one at Radio Shack or pay more for a Diamond or other brand. They will all do about the same job. They are not very sensitive below the aircraft band unless they have a vertical whip sticking out the top.

Check the GROVE site. NASA frequencies are routinely published there.
Additionally, check the WA3NAN site (Goddard Space Station,Greenbelt,MD)
They rebroadcast all the SARWX missions on several frequencies in the
amateur bands.

I agree with that. Monitor America is too out dated for me. Not to mention, my copy is falling apart at the bindings, because they have too many pages for a book that is so short. Also, it doesn't give alot of local freq's that regional books have. I think most people will get more out of a local/regional book then you will out of Monitor America. Thats why I suggested METROSCAN over Monitor America..... Of course not everyone is as lucky to live in the areas covered by this book.

YES! A top-notch scanner in it's day. Fully modifiable, although it's a real
pain to get to the diode. If you don't want it, I'll take it.

You may be smarter to go with the Icom as it is external.
ISA is a waste fo money. Look at the long ongoing thread in the hardware
groups about ISA being dead.
No new computer will have an ISA card in it if it is built to industry spec.
If you open one up and it has an ISA card you got screwed by the
manufacturer.
Sue them!

Gerhard Gnant wrote in message <362ee0fb.6436435@news.austria.eu.net>...
hi from europe

would like to buy an external winradio type,
but i am not sure if the serial connection to the
pc (max. 115kbit/s) is fast enough for a good
data update rate, for example the hf spectrum.
and no, i can't use a pccard, cause i have a pc tower,
and no, i won't put in a pccard add on.

anybody out there who owns both,
an external and isa model to clearify this ?

regards

gary

>by
>this book.

I agree also. But like you say, it depends where you live. The Scanner Master guides are a good example. The volume for the state that it covers can be up to 700 pages long, with lots of inside info on how the state police, local fire etc. etc. operates. It's a lot more than mere freqs. After all, if freqs is all you want, the CDs like Scanner Base make much more sense.

1933. Trunking Digital Signals Homepage Updated

Newsgroup: rec.radio.scanner
Date: 1998-10-22 00:00:00 UTC
From: "Lindsay C. Blanton" <lblant1@airmail.net>
Message-ID: <5C770D2E075AF373.D37103A081CD5074.F13C8176BED03A45@library-proxy.airnews.net>
Source record: 140814
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi Folks!

I've updated my Trunking Digital Signals homepage with a lot of new information.

I've included a new set of screen shots for the Trunker application and the Etrunk application when they are in use on active systems. These screen shots illustrate the differences between each application, and the differences between trunker decoding Type I and Type II systems. Also, they look pretty cool ... ;-)

I've also updated the downloads page with the March 21 version of Etrunk. Many users have asked me to provide this version because it only allows one EDACS disconnect beep to be heard when tracking as opposed to the two beeps that the latest Etrunk version allows. Folks say this version gives a little better performance when tracking EDACS systems. You be the judge.

If anyone has any updates, hints, tips or tricks for using trunker, feel free to forward them my way. I'd be glad to add all the information I can to the web site.

The site is located at:
http://web2.airmail.net/lblant1/dfw/digital.htm

Thanks, and happy TRUNKING!

-Lb

Has anyone gotten the new mobile TT yet from Rat Shack? They are willing to take an order, but know nothing about delivery dates.

If you have gotten one, what do you think? What type of audio output? enough to overcome the ambient noise of a vehicle?

Message-ID: <70ol0o$l55$1@autumn.news.rcn.net>
Source record: 140817

What does having a PC tower have to do with internal cards? I have owned many tower configurations and use plug-in cards in all of them. I have a 5 month old Gateway 333 MHz and I could either put a Winradio card in OR use the Icom external box.

1938. POCFLEX

Newsgroup: rec.radio.scanner
Date: 1998-10-22 00:00:00 UTC
From: Ozzie Bostic <Obostic3@flash.net>
Message-ID: <70onlk$9k1$1@excalibur.flash.net>
Source record: 140819

I have recently down loaded POCFLEX but I am unable to receive any
data via the serial port. I believe that the program receives its
data via DTR. I have an optoelectronics optlinx interface which places
the audio signal on pin 6(DSR) of the serial port.

If someone could make any suggestion on how to obtain the DSR rather
than
the DTR signal, I would greatly appreciate any efforts or if someone
could email
the changes to the source code which is provided when POCFLEX is
unzipped. I can implement
the necessary changes and recompile the source code. But I will
need to know which version of the C++ compiler was used to compile
POCFLEX. This
would be very helpful.

Thank in advance

Oz

I don't know if I should laugh or cry ! !

I don't know how much info I have faxed, e-mailed or snail-mailed to different members in this group. Quite a bit, much of it was of actual value, even if it was only 50 or 60 cents postage. But I never considered charging a dime for any of it. Never crossed my mind to ask for anything. I ask for some help, I get it. Someone else asks. I help if I can. Thats what this group is about.
Then there is Chris. I did a author profile in Dejanews. I see him in rec.radio.amateur.misc getting free mod info for his Icom IC-T8A . Perhaps he will sell you that info as well. Only $5 !!!
I also saw a sex line he was advertising in alt.sex.pre-teen , but I think it was a fake. Didn't make the call.

Hi, I live in Abbotsford as well. Interesting listening once in awhile.

RCMP Repeater 139.5300
RCMP Dispatch 139.3500
RCMP Freeway Sumas 140.6400
RCMP Freeway 142.0350
RCMP TACT 1 .... 139.0800
RCMP TACT 2 .... 139.2150
RCMP TACT 3 .... 139.2900
RCMP TACT 4 .... 155.6700

Fire 154.8900

Ambulance main ... 142.3950
Ambulance 149.1100
Ambulance ptbl.... 149.4400

These were taken from the Frequency List from 1994. Drop me a note if
you want more...

In the 10000 posts you have made this year alone less then 1% had
anything to do with the topic, my percentage is well over 98%.
Anyone wanting to verify this should visit:
http://x12.dejanews.com/dnquery.xp?QRY=*&DBS=1&ST=PS&defaultOp=AND&LNG=ALL&format=terse&sh
owsort=score&maxhits=100&subjects=*&groups=rec.radio.scanner&authors=jma*@*&fromdate=&toda
te=

http://x12.dejanews.com/dnquery.xp?QRY=*&DBS=1&ST=PS&defaultOp=AND&LNG=ALL&format=terse&sh
owsort=score&maxhits=100&subjects=*&groups=&authors=*@parg.org&fromdate=&todate=

And this is not even 50% of your posts! It seems that you have used a
variety of combinations of your e-mail address for some unknown reason

apparently to confuse news filters so I am just estimating the 10000
number and I'm quite sure its low.

>> >I have not created Crudhacker, or any other ID except my own obvious

Wow, good answer! Although I've connected the TP-2 pin to the center
pin of an rca jack with just plain old 18g insulated wire with no
problems. The case provides a good ground and as long as you don't run
the wire all around the inside you won't have a noise problem.

From the FAQ article SCANNER RADIO REVIEW BRIEFS:

PRO-2046: 1996 vintage 100 channel mobile made by Uniden
with fairly good performance. Descendent of the BC760XLT
but no CTCSS option available. Ten banks of ten channels.
Scans memory at about 34 channels/sec. Service search,
direct search, and band search. Preset search limits by
band and user cannot program the search limits. Image
rejection is minimal, as one would expect from a scanner
with IFs of 10.85 and 0.450 MHz. 10 Monitor memory
channels. Can lock out up to 20 channels from a search.
See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in
Monitoring Times, October 1996, for a review which includes
quantitative test results.

I have for sale an AOR-1500 wide range scanner. It covers from
520Khz to 1300Mhz with no gaps. WFM, NFM, AM coverage and
also has a BFO for sideband and cw. Unit is in very good condition
with all accessories and in original box. $350 shipped insured in the
lower 48. Cashiers check or money order only.

Don't know about water proof of Sportcat. But as far as value of non trunked scanner, it depends on your locale. You can still pick up some of the trunked messages on an ordinary scanner, just lose the continuation after person unkeys. Also may places still have transmissions that aren't trunked.
Just my opinion.

hi from europe

would like to buy an external winradio type,
but i am not sure if the serial connection to the
pc (max. 115kbit/s) is fast enough for a good
data update rate, for example the hf spectrum.
and no, i can't use a pccard, cause i have a pc tower,
and no, i won't put in a pccard add on.

anybody out there who owns both,
an external and isa model to clearify this ?

regards

gary

> http://www.sanders.com/telecomm/wireless.htm
>
> http://www.sanders.com/telecomm/

The same ones used for PCS!!!

> Can these signals be intercepted?

Sure! As well as you can intercept any PCS signal. Tune to
1.9GHz...But you probably can't do much with it!

All they are doing is using the CATV "trunk" as a link to connect
the little cell-sites with the central office.

Something has to carry the traffic from the remote cell site to
the main switching office. That "something" is usually leased
land lines or microwave radio.

Modern CATV systems are two-way - Signals in the field can be
sent back to the head-end. Ever wonder how the cable company gets
the city council meetings from across town? The two-way
capability is the heart of high speed "cable modems".

What they are doing is placing tiny PCS "cell sites" along the
cable TV trunk cable, and using the CATV trunk as a "conduit" to
carry the traffic back to the switching office (and also provide
power). No land-lines or microwaves needed - and since they are
already up on poles - no expensive towers needed.

If there is a "hole" in the cell companies coverage - they can
slap one of these low-power sites on the nearest CATV trunk to
fill in the "hole" - without having to dump tens-of-thousands of
dollars into setting up a conventional cell site, obtaining
permits, finding a site, etc, etc.

Simply, the mini PCS "cell sites" work like any other cell site, but they receive their datastream on an unused TV channel and send their data on the sub-bands. By using the existing CATV wiring and poles, the PCS company saves having to install cell towers.

Pretty neat idea, really...

Cheers,
Paul Grohe

1969. MVT9000 vs. AR8200

Newsgroup: rec.radio.scanner
Date: 1998-10-22 00:00:00 UTC
From: "Aad@his.best" <AvStrien@usa.net>
Message-ID: <70msdefnp1@newnews.nl.uu.net>
Source record: 140869
Cross-posted to: rec.radio.scanner,alt.radio.scanner,nl.radio.scanners

Hi John, you asked comments on the MVT-9000 and the AR-8200. I happen to own both of them, so here are some comparisons.

========== Why I prefer the Yup over the AOR ==========

I never, never had a single hangup with the MVT-9000, but the AR-8200 locks up on virtually any inadvertent key touch. Sometimes it displays 'PLL error', just freezes for several minutes, or freezes unjtil the batteries exhaust (either by time, or by me manually removing them, which is a burden anyway; more on that later).

The MVT-9000 (like all Yupi's before) is extremely straightforward in scanning and programming. Key sequences are at most 2 keys (apart from numeric fields), whereas AR-8200 may require lengthy series of key sequences. This is partially due to the abundance of functions in the AOR (it tries to combine all features of Yupiteru MVT-9000, iCOM IC-R10 and AOR AR-8000, plus a few more), partially because the design is not logical. To give an example: To switch from VFO mode to MEMORY mode, there is no memory button: You should press 'SCAN'. Yupi accepts the MR (memory recall), eventually directly in combination with a channel number, e.g. "2 5 MR" recalls channel 25, irrespective of the mode the scanner is in, wether scanning, searching, in memory display or VFO mode.

The MVT-9000 has a nice hysteresis circuitry which prevents the squelch from 'fluttering' on and off, whereas the AR-8200, especially when listening to remote transmissions from within a driving car, opens and closes the squelch some 6 to 10 times per second. Manually lowering the squelch level leaves it open at end-of-transmission, manually increasing the squelch level definitrely suppresses the transmission. Yupi just has better operation here.

The MVT-9000 features a power-save mode which does NOT influence keyboard operation or reaction to the control knob. The scanner instantaneously responds to both of them. AR-8200 has a power save feature as well, but when active, all controls (rocker, tuning wheel, Function/moni/Keylock and keyboard) sometimes respond slowly, sometimes not at all, sometimes instantaneously. This is awfully annoying.

The MVT-9000 is clear about its features. It does not suggest it has a voice squelch, so you don't expect it. But the AR-8200 has the ability to set voice squelch, however it does no good job in distinguishing between carrier-only and speech, less between data and speech (they should try an iCOM IC-R10, which has superb voice squelch but is slow on scanning).

The MVT-9000 band scope allows you to listen to transmissions while the bandscope is sampling other frequencies. The AR-8200 mutes during bandscope, and if you manually open the squelch, the band scope is paused immediately. Also, within certain limits, the MVT-9000 bandscope channel width automatically tunes to the current step size, with AOR both are independent.

The MVT-9000 (like all other scanners except AOR) instantaneously responds when scrolling through memory channels. The AOR always takes its time to switch from one memory bank to another, sometimes only half a second, sometime op to 6 seconds (when not that many memory channels are filled).

The MVT-9000 maintans a scan speed of some 35 channels per second, irrespective of the variation in frequencies, receive modes, step sizes etc. The AR-8200 scan speed significantly reduces to some 20 channels per second (may be even slower), and produces an irritating click-erdy-click-erdy-click when switching between e.g. AM and FM

The MVT-9000 has much better screen illumination than AR-8200.

The MVT-9000 has a battery cover exactly sliding into position, covering and closing the battery compartment, where batteries are easily inserted or removed through a guiding tape. The AR-8200 cover is flabby, batteries have to be hammered in place, and be peeled out with a screwdriver or so.

The MVT-9000 has its speaker on top, so the scanner can be placed in some container in my car. AR-8200 has the speaker at the bottom part, so sound is obstructed when the scanner is placed in a bin.

The MVT-9000 has a tuning knob on top to control various menus, to switch between memory channels or to alter the frequency. In combination with a function key, the speed of switching can be increased. This same knob can be found on various other scanners including the professional iCOM ones. Instead, AR-8200 features a tuning thumb wheel and a rocker key, but even after 2 weeks of only using the AR-8200, I continuously and desperately miss the tuning knob.

The MVT-9000 has has a built-in AM antenna which can be switched on and off, whereas the AOR has one which is detachable and hence can be lost (unless you fix it to a string).

The MVT-9000 has a belt clip which is sufficiently elastic that it slides over a belt without requiring extreme force or the risk of damaging your belt. AR-8200 uses a stainless steel sort shave blade (well, sort of) which easily cuts your belt or clothes where you attach the scanner to.

The text that is printed on the case of the MVT-9000, just above the keys, is such good quality that it is still readable after years of intensive usage. Now, after 2 weeks of day-and-night programming the AR-8200, the white text on the case is disappearing noticeably (yet readable).

The MVT-9000 has (like most scanners) a lamp switch to turn on the light. AR-8200 requires a dummy operation like 'Function', pressed twice.

The MVT-9000 has two different key lock options, one which disables the keyboard, the other one disabling keyboard, the control knob and a few other

buttons. AR-8200 only features one single 'lock everything except volume and squelch'.

The MVT-9000 allows 10 priority channels to be programmed. These priority channels need not be stored inside the 1000 regular channels, there is a separate priority bank available. AR-8200 has only one priority channels which MUST be selected from regular memory.

========== Why I prefer AOR over the Yup ==========

To start with the AM antenna: AOR's one does a really great job, much better than the MVT-9000 built-in one.

The text on the keyboard keys is sort of baked inside the keys, hence will never disappear. On MVT-9000 (as with its predecessor, MVT-7100), text disappears, especially on the more frequently operated keys like ENTER and MR.

The case design of AOR (apart from the battery cover) is sturdy, has better grip (feels somewhat like rubber), it will never (never say never) slip from your hands

AOR-8200 is slightly smaller than MVT-9000, yet large enough to hold it firmly and to accomodate sufficiently large keys (E.g. Welz and IC-R2 are so small that the keys must be submitiature, which sometimes poses a problem)

AOR has announced a computer control option, a nice alternative to fill up 1000 channels with associated text. MVT-9000 can only be programmed through the keyboard.

AOR has announced a CTCSS decoding tone squelch option, which allows a scanner to open the squelch only is a predefined identification tone is part of a transmission (useful when multiple companies share the same frequencye, *AND* use CTCSS encoding).

AR-8200 features a whole bunch of bank linkage and search range linkage memories, dual VFO watch, VFOA-through-VFOB search, flex-banks, text search (like iCOM IC-R10), programmed squelch levels, memory protection on the individual channel level, at the memory bank level, and as a global setting (part of it found on iCOM IC-R2), the ability to suppress frequency display (also found on iCOM IC-R2) and memory management (Copy, Move, Swap, Delete of individual memories and banks).

AR-8200 (this is the very best feature found on a scanner, IMHO) has 10 quick-memories that allow you to store a frequency with one single key press for later review, with automatic elimination of duplicate entries or entries within 10 kHz apart from each other).

AR-8200 offers, apart from computer interface, a way to back up memories just in case of ..., and a few other options like speech inversion (outdated scrambling method), speech recording, tone elimination, and cloning capabilitye (like iCOM IC-R10).

AR-8200, when operated between 460 and 470 Mhz, has noticeably better intermodulation suppression than MVT-9000, even better than MVT-7100. Hope it improves even more when the CTCSS option comes available.

========== ==========

The above list is still incomplete, but it gives a reasonable impression. To summarize, my MVT-9000 is definitely my favourite, and I'm eager to see what Yupiteru will announce in spring 1999 for shipment somewhere 3rd quarter 1999.

Bot to be honest, if you need at least 3 times as much programming facilities, absolutely want a computer interface or are delighted with the bunch of expansion options, then you won't get it without the AR-8200. Judge yourself.

Kind regards,

Aad J. van Strien

What a dork ! I'll post the frequencies for the cordless phones for free
and I won't post the Baby monitors because thats really weird thing

to do is listen to a baby monitor.
Here are the Freq's for cordless analog phones
most commonly used freqs 46.61,46.63,46.67,46.71,46.73,46.77,
46.83,46.87,46.93,46.97 there are more but they aren't used as much
try scanning between 43.72-44.48 for more theses are base freq's only.

Suppose you want to get to a specific channel. While in the non scan mode
press GO TO + the channel #.
Turbo is used for seach. Instead of searching in steps of 15, you serch in
steps of 30.

Reception on the 30-50mhz part of the band is a little weak. Using the same antenna, my Pro-2041 scanner performs much better in this range. However, everything else above these frequencies is quite good. Sensitivity in the FM broadcast band, as well as 2 meters and 440-460 mhz is excellant. I really like this little radio. I use it mainly as a scanner for local public service monitoring. I can also reach our local ham repeater since it is only three miles away.

Virtually new in the box, used for only several hours. This is a handheld scanner with 1000 programmable channels. It has full coverage from 500 KHZ-1300 MHZ.

Unit comes with the original manual, box, AOR carrying case, antenna, earphone, regular 4 cell (AA) drop in holder, and ac adapter. It also comes with the extra rechargeable battery pack which holds charges very well. The unit works well in all modes, including SSB. Will ship and insure to lower 48 States for $300.

Sorry about that. I forgot to list all the information on METROSCAN. The site I gave you, is owned by Artsci Co. who owns Artsci Publishing, who has the rights to the book METROSCAN. If you go to www.artscipub.com, you can order the book, but they do not have a description of it. You have to use the "search for items" feature to order it, just type in "metroscan" or "scan" and it will show you the list price. There is an email address to the editor of the book, who is Ron Stevens (metroscan@artsci.net). Just in case you need it, here is the ISBN: 0-917963-15-6. The following is a mailing address and phone number.

Artsci Publishing
P.O. Box 1428
Burbank, CA 91507
818-843-4080 ph.
818-846-2298 fax

I bought my copy at Frys Electronics, but Ham Radio Outlet in Burbank (www.hamradiooutlet.com) should also carry the book. I like the fact that the back cover is a quick index (by city) of the pages where the freq's can be found in the book. Also, that the author attempted to list every PL tone for every freq in the book. I would suggest this book to any Southern California scanner listener.

Be honest: would you purchase a scanner that old if, for the same amount, you can have a more recent, brand new Yupiteru MVT-7100 with same specs but far more scanning features from Bandercom? The Yupi also has a real BFO to receive SSB, not just a simple narrow off-center filter. Try a lower price ...

Amen, Glenn. I get sooo tired of all the absurd claims. A lot of people reported on a "so-called" demo that the Codex did on the Discovery channel, but that was mostly staged, and the monitor was an old monochrome terminal. To deal with a modern monitor, you'd need electronics capable of determining the resolution, horizontal and vertical rates, color setting (i.e. 256 color or 16 bit etc) and be capable of filtering and separating a multitude of signals. The Consumertronics toy won't even come close. Don't believe the hype.

1997. bc200xlt power problem

Newsgroup: rec.radio.scanner
Date: 1998-10-23 00:00:00 UTC

I can only turn the radio on if it is on the ac charger or from the car cigarette power line.
If I unplug the radio from the above sources, it will not start up again, until I plug it back into those 2 sources.

When I try to turn it on with just battery power I do hear the normal audible click.

Checked the voltages of the battery pack, it is at 7.2 volts.
It clearly makes contact with the radio spring metal contacts.

If I turn the radio way up on volume on battery power it produces a lot of distortion. Works okay at lower volumes. This is not a problem while powered by A.C.

Any ideas?

All I can say is do not get hooked from a guy in LOUISVILLE,KY.
He goes under different names and address's and puts a low price on
2005's and 2006's. he was just on last sun. with a 2006 for $175.
I got taken by him.......BEWARE....JERR

try checking the voltage under a load. might have a cell in the pack
starting to go bad

I have a modified RS Pro 2042 that is connected to my serial port
and I run Probe (scanner control software) at 19200 k. This gives me a
scanning speed of ~115 channels per second - more than double the stock
rate. The serial port is more than fast enough, IMHO.

I don't have immediate access to my recent issues of Popular Communications right now, but they did a review fairly recently on WinRadio. Check out their Web site at www.popcomm.com - you might be able to find it there... If pressed for it, I can look the article up and scan it and send it to you...

Nuh-uh ding-bat. English fails you yet again. "Appreciate" and "respect" have differing definitions, and you can't use them interchangeably. You may "respect" an aggressive opponent, but you may not "appreciate" the way he pounds your sorry ass into the ground.

> mouth!!!!!

Naaaawww. I'm just hawkin' up a dandy of a lugey in case you get in spittin' range.

But seriously: You said Bill left and "The majority of us appreciate his decision & respect his choice".

I "respect" Bill's choice.

But I am not "appreciative" or thankful that Bill decided not to participate.
